DIGITAL POWER CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

U.S. dollars in thousands, except share and per share data

NOTE 1:- GENERAL

Digital Power Corporation ("the Company" or "DPC") was incorporated in 1969, under the General Corporation Law of the state of California. The Company has a wholly-owned subsidiary, Digital Power Limited ("DPL"), located in the United Kingdom. The Company and its subsidiary are currently engaged in the design, manufacture, sale and distribution of switching power supplies and converters. The Company has two reportable geographic segments - North America (sales through DPC) and Europe (sales through DPL).

NOTE 2:- SIGNIFICANT ACCOUNTING POLICIES

a. The significant accounting policies applied in the annual financial statements of the Company as of December 31, 2007, are applied consistently in these financial statements. In addition, the following accounting policy is applied:

The accompanying unaudited consolidated financial statements as of June 30, 2008, and for the six months ended June 30, 2008 and 2007 are unaudited and reflect all adjustments (consisting only of normal recurring adjustments) which are, in the opinion of management, necessary for a fair presentation of the financial position and operating results for the interim periods. The condensed consolidated financial statements should be read in conjunction with the consolidated financial statements and notes thereto, together with management's discussion and analysis of the financial condition and results of operations, contained in the Company Annual Report on Form 10-KSB for the fiscal year ended December 31, 2007. The results of operations for the six months ended June 30, 2008, are not necessarily indicative of the results for the entire fiscal year ending December 31, 2008.

b. Accounting for stock-based compensation:

The Company has several stock-based employee compensation plans, which are described more fully in Note 4. Effective January 1, 2006, the Company adopted the fair value recognition provisions of FASB Statement No. 123(R), "Share-Based Payment" ("SFAS 123(R)"), using the modified-prospective-transition method.

The Company and its subsidiary apply SFAS 123 and Emerging Issues Task Force No. 96-18 "Accounting for Equity Instruments That are Issued to Other Than Employees for Acquiring, or in Conjunction with Selling, Goods or Services" ("EITF 96-18"), with respect to options issued to non-employees. SFAS 123 requires use of an option valuation model to measure the fair value of the options at the grant date.

NOTE 3:- INVENTORIES

	June 30, 2008 Unaudited
Raw materials, parts and supplies	\$ 316
Work in progress	213
Finished products	930
	\$ 1,459

DIGITAL POWER CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

U.S. dollars in thousands, except share and per share data

NOTE 4:- ACCOUNTING FOR STOCK BASED COMPENSATION

a. Share option plans:

1. Under the Company's share option plans, options may be granted to employees, officers, consultants, service providers and directors of the Company or its subsidiary.
2. As of June 30, 2008, the Company has authorized, by several Incentive Share Option Plans, the grant of options to officers, management, other key employees and others of up to 2,272,000 of the Company's Common shares. As of June 30, 2008, an aggregate of 735,870 of the Company's options are still available for future grant.
3. The options granted generally become fully exercisable after four years and expire no later than 10 years from the approval date of the option plan under the terms of grant. Any options that are forfeited or cancelled before expiration become available for future grants.

A summary of the Company's employee share option activity (except options to consultants and service providers) and related information is as follows:

	Six months ended June 30, 2008			
	Amount of options	Weighted average exercise price	Weighted average remaining contractual term (years)	Aggregate intrinsic value*
Outstanding at the beginning of the period	930,190	\$ 1.15		
Expired	(31,155)	\$ 2.31		
Outstanding at the end of the period	899,035	\$ 1.11	5.71	45
Exercisable options at the end of the period	747,535	\$ 1.03	5.21	45

* Calculation of aggregate intrinsic value is based on the share price of the Company's Common share as of June 30, 2008 (\$0.86 per share).

DIGITAL POWER CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

U.S. dollars in thousands, except share and per share data

NOTE 4:- ACCOUNTING FOR STOCK BASED COMPENSATION (Cont.)

Under the provisions of SFAS 123(R), the fair value of each option is estimated on the date of grant using a Black-Scholes option valuation model that uses the assumptions such as stock price on the date of the grant, exercise price, risk-free interest rate, expected volatility, expected life and expected dividend yield of the option. Because Black-Scholes option valuation models incorporate various judgmental assumptions for inputs, as described above. Expected volatility is based exclusively on historical volatility of the entity's stock as allowed by SFAS 123(R). The Company uses historical information with respect to the employee options exercised to estimate the expected term of options granted, representing the period of time that options granted are expected to be outstanding. The risk-free interest rate of period within the contractual life of the option is based on the U.S. Treasury yield curve in effect at the time of grant.

No options were granted during the first six months of 2008.

As of June 30, 2008, there was \$ 113 of total unrecognized compensation cost related to unvested share-based compensation arrangements granted under the plans. That cost is expected to be recognized over a period of two years.

b. Employee Stock Ownership Plan:

The Company has an Employee Stock Ownership Plan ("ESOP") covering eligible employees. The ESOP provides for the Employee Stock Ownership Trust ("ESOT") to distribute shares of the Company's Common stock as retirement benefits to the participants. The Company has not distributed shares since 1998. As of June 30, 2008, the outstanding Common shares held by the ESOT amount to 167,504 shares.

NOTE5:- NET EARNINGS (LOSS) PER SHARE

The following table sets forth the computation of the basic and diluted net earnings (loss) per share:

	1.		Numerator:	
	Six months ended June 30,		Three months ended June 30,	
	2008	2007	2008	2007

ITEM MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS 2. OF OPERATION

SPECIAL NOTE REGARDING FORWARD-LOOKING STATEMENTS

This quarterly report contains forward-looking statements regarding future events and our future results that are subject to the safe harbors created under the Securities Act of 1933 and the Securities Exchange Act of 1934. All statements other than statements of historical facts are statements that could be deemed forward-looking statements. These statements are based on our expectations, beliefs, forecasts, intentions and future strategies and are signified by the words "expects," "anticipates," "intends," "believes" or similar language. In addition, any statements that refer to projections of our future financial performance, our anticipated growth and trends in our business, and other characterizations of future events or circumstances are forward-looking statements. These forward-looking statements are only predictions and are subject to risks, uncertainties, and assumptions that are difficult to predict, including those identified below, under "Part II, Item 1A. Risk Factors" and elsewhere in this report. Therefore, actual results may differ materially and adversely from those expressed in any forward-looking statements. All forward-looking statements included in this quarterly report are based on information available to us on the date of this report and speak only as of the date hereof. We undertake no obligation to update or revise publicly any forward-looking statements, whether as a result of new information, future events, or otherwise.

In this quarterly report, the "Company," "we," "us" and "our" refer to Digital Power Corporation, a California corporation, and our wholly-owned subsidiary, Digital Power Limited.

GENERAL

We are engaged in the business of designing, manufacturing and selling switching power supplies to the industrial, telecommunications, data communications, medical and military industries. Revenues are generated from sales to distributors and original equipment manufacturers (OEMs) in North America and Europe.

We have continued our efforts to develop advanced power products, to increase sales to existing and new customers, and to seek to manufacture our products in Asia and other strategic locations. While we believe our revenues have increased to a sufficient amount to offset our expenses, we may be subject to net losses in any individual quarter. We believe that our cash will be sufficient to fund any losses for at least 12 months.

Our corporate office, which contains our administrative, sales, and engineering functions, is located in Fremont, California ("DPC"). In addition, we have a wholly-owned subsidiary, Digital Power Limited ("DPL"), which is located in Salisbury, United Kingdom and does business as Gresham Power Electronics. DPL designs, manufactures and sells switching power supply products for the European market place, including power conversion products for naval and military applications and DC/AC inverters for the telecommunications industry.

THREE AND SIX MONTHS ENDED JUNE 30, 2008, COMPARED TO JUNE 30, 2007

Revenues

Our revenues increased by 32.0% to \$3,347,000 for the three months ended June 30, 2008, from \$2,536,000 for the three months ended June 30, 2007. The increase in revenues is mainly attributed to an increase of sales of our commercial products, particularly our high density product lines and products customized for particular customer applications. The increase in revenues from our commercial products during this period increased by 51.0% to \$2,375,000 for the three months ended June 30, 2008, from \$1,573,000 for the three months ended June 30, 2007. Revenue from sales of our military products increased slightly by 0.9% to \$972,000 for the three months ended June 30, 2008, from \$963,000 for the three months ended June 30, 2007.

Revenues from our U.S. operations increased by 13.1% to \$1,257,000 for the three months ended June 30, 2008, from \$1,111,000 for the three months ended June 30, 2007. Revenues from our European operations of DPL increased 46.7% to \$2,090,000 for the three months ended June 30, 2008, from \$1,425,000 for the three months ended June 30, 2007. The increases in our revenues from our U.S. and European operations are mainly attributed to an increase in sales of our commercial products, as discussed above.

- 13 -

For the six months ended June 30, 2008, our revenues increased by 23.5% to \$6,516,000, from \$5,278,000 for the six months ended June 30, 2007. Revenues from our commercial products increased by 35.5% to \$4,868,000 for the six months ended June 30, 2008, from \$3,592,000 for the six months ended June 30, 2007. Revenues from our military products decreased by 2.3% to \$1,648,000 for the six months ended June 30, 2008, from \$1,686,000 for the six months ended June 30, 2007. The overall increase in revenues is mainly attributed to an increase in sales of our commercial products, as discussed above.

For the six months ended June 30, 2008, revenues attributed to our U.S. operations increased by 4.0% to \$2,406,000 from \$2,314,000 for the six months ended June 30, 2007. The increase in product revenue is mainly attributed to an increase in sales of our military products, offset partially by a decrease in sales of our older product lines. Revenues from our European operations of DPL increased by 38.7% to \$4,110,000 for the six months ended June 30, 2008, from \$2,964,000 for the six months ended June 30, 2007. The increase in revenues is mainly attributed to increases in sales of our commercial products, as discussed above.

Gross Margins

Gross margins increased to 25.7% for the three months ended June 30, 2008, compared to 22.2% for the three months ended June 30, 2007. The lower gross margin for the three months ended June 30, 2007 was primarily due to a write-off charge of \$140,000 for obsolete inventory in our European operations. Gross margins for the six months ended June 30, 2008 were 25.8% and were essentially flat compared to the gross margin of 25.4% for the six months ended June 30, 2007.

Engineering and Product Development

Engineering and product development expenses were \$142,000, or 4.2% of revenues, for the three months ended June 30, 2008, compared to \$181,000, or 7.1% of revenues for the three months ended June 30, 2007. The decrease was primarily due to lower salary and consulting expenses, including the cessation of consulting fees being paid on a project that had been completed. Engineering and product development expenses were \$302,000, or 4.6% of revenues, for the six months ended June 30, 2008, compared to \$402,000, or 7.6% of revenues, for the six months ended June 30, 2007. This decrease was primarily due to the increase in revenues from quarter to quarter, coupled with decreases in salary and consulting expenses described above.

Selling and Marketing

Selling and marketing expenses were \$190,000, or 5.7% of revenues, for the three months ended June 30, 2008, compared to \$249,000, or 9.8% of revenues, for the three months ended June 30, 2007. The decrease was primarily due to a decrease in salary and consulting expenses as a result of a decline in the number of our sales employees and consultants. We are currently seeking replacement personnel. Selling and marketing expenses were \$460,000, or 7.1% of revenues, for the six months ended June 30, 2008, compared to \$478,000, or 9.1% of revenues, for the six months ended June 30, 2007. The decrease was primarily due to the increase in revenues and, as discussed above, a lower headcount in sales employees and consultants.

General and Administrative

General and administrative expenses were \$321,000, or 9.6% of revenues, for the three months ended June 30, 2008, compared to \$334,000, or 13.2% of revenues, for the three months ended June 30, 2007. General and administrative expenses were \$880,000, or 13.5% of revenues, for the six months ended June 30, 2008, compared to \$634,000, or 12.0% of revenues, for the six months ended June 30, 2007. Expenditures increased in 2008 by \$246,000 mainly due to the accrual of liabilities in relation to the separation agreement with our former President and Chief Executive Officer.

Financial Income

Financial income was \$9,000 for the three months ended June 30, 2008, compared to financial income of \$13,000 for the three months ended June 30, 2007. Financial income was \$13,000 for the six months ended June 30, 2008, compared to financial income of \$29,000 for the six months ended June 30, 2007. The decrease in financial income was due to primarily lower interest rates.

- 14 -

Net Income (Loss)

For the three months ended June 30, 2008, we had net income of \$215,000 compared to a net loss of \$196,000 for the three months ended June 30, 2007. The increase in net income is due to primarily an increase in revenues, coupled with a slight decrease in operating expenses. Net income for the six months ended June 30, 2008 was \$54,000 compared to a net loss of \$155,000 for the six months ended June 30, 2007. The increase in net income is due to primarily an increase in revenues.

LIQUIDITY AND CAPITAL RESOURCES

On June 30, 2008, we had cash and cash equivalents of \$1,564,000 and working capital of \$3,655,000. This compares with cash and cash equivalents of \$1,427,000 and working capital of \$3,254,000 at June 30, 2007. The increase in working capital is mainly due to increases in cash, accounts receivable, offset partially by increase in other accrued liabilities, accounts payable and related parties trade payables, and decreases in inventory, prepaid expenses and other receivables.

Cash provided by operating activities totaled \$123,000 for the six months ended June 30, 2008, compared to cash used in operating activities of \$72,000 for the six months ended June 30, 2007. An increase in cash flow from operating activities was mainly due to an increase in net income, a decrease in inventory, and an increase in accrued liabilities, offset partially by decreases in accounts payable and related parties trade payables.

Net cash used in investing activities was \$5,000 for the six months ended June 30, 2008, compared to net cash used in investing activities of \$25,000 for the six months ended June 30, 2007. We believe we have adequate resources at this time to continue our operational and promotional efforts to increase sales in the electronic industry market. However, if we do not meet those goals, we may have to raise money through debts or equity, which may dilute shareholder's equity.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Not included for a smaller business issuer.

ITEM 4T. DISCLOSURE CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

Our Chief Executive Officer and our Chief Financial Officer, after evaluating our disclosure controls and procedures (as defined in the rules and regulations of the Securities and Exchange Commission under the Securities Exchange Act of 1934 (the "Exchange Act")) as of the end of the period covered by this quarterly report, have concluded that as of such date, our disclosure controls and procedures were effective to ensure that information we are required to disclose in reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in Securities and Exchange Commission rules and forms.

Changes in Internal Controls over Financial Reporting

During the period covered by this quarterly report, there were no significant changes in our internal controls over financial reporting or in other factors that have materially affected, or are reasonably likely to materially affect, our internal controls over financial reporting.

PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

See our disclosures under “Legal Proceedings” in our Form 10-KSB filed March 31, 2008 and our Form 10-Q filed May 15, 2008. There has been no material development of those proceedings since those respective filings.

- 15 -

ITEM 1A. RISK FACTORS

The risk factors listed in this section provide examples of risks, uncertainties and events that may cause our actual results to differ materially from the expectations we describe in our forward-looking statements. Readers should be aware that the occurrence of any of the events described in these risk factors could have a material and adverse effect on our business, results of operations and financial condition. We undertake no obligation to update or revise publicly any forward-looking statements, whether as a result of new information, future events, or otherwise.

Although we experienced an operating profit during the six-month period ended June 30, 2008, we have historically experienced net losses and may experience net losses in the future.

For the six-month period ended June 30, 2008, we had an operating profit of \$41,000. We had similar operating profits for the years ended December 31, 2007 and 2006. Although we have actively taken steps to reduce our costs, we could incur losses in the future until we increase revenues through the sale of current products and decrease manufacturing costs through a greater use of contract manufacturers in Asia and other strategic locations.

If our new development efforts fail to result in products which meet our customers' needs, or if our customers fail to accept our new products, our revenues will be adversely affected.

We have recently introduced on a limited basis our high density products. The successful development, introduction and commercial success of reaching new market segments providing advanced power products and introducing new products will depend on a number of factors, including our ability to meet customer requirements, the existence of competitive products in the market, our ability to meet product cost targets generating acceptable margins, timely remediation of product performance issues, if any, identified during testing, product performance at customer locations, differentiation of our product from our competitors' products, and management of customer expectations concerning product capabilities and life cycles.

We depend upon a few major customers for a majority of our revenues, and the loss of any of these customers, or the substantial reduction in the products that they purchase from us, would significantly reduce our revenues and net income.

We currently depend upon a few major OEMs and other customers for a significant portion of our revenues and we expect to continue to derive a significant portion of our revenues from a limited number of customers in the future. The loss of any of these customers or a substantial reduction in the products that they purchase from us would significantly reduce our revenues and net income. Furthermore, diversions in the capital spending of certain of these customers to new network elements have and could continue to lead to their reduced demand for our products, which could in turn have a material adverse affect on our business and results of operation. If the financial condition of one or more of our major customers should deteriorate, or if they have difficulty acquiring investment capital due to any of these or other factors, a substantial decrease in our revenues would likely result. Failure of our development efforts could adversely affect our operations, revenues and growth.

We are dependent on the electronic equipment and telecommunications industries.

Substantially all of our existing customers are in the electronic equipment and telecommunications industries, and they manufacture products that are subject to rapid technological change, obsolescence, and large fluctuations in demand. These industries are further characterized by intense competition. The OEMs serving these markets are pressured for increased product performance and lower product prices. OEMs, in turn, make similar demands on their suppliers, such as us, for increased product performance and lower prices. The telecommunication industry is inherently volatile. Recently, certain segments of the telecommunication and other electronic industries have experienced a significant softening in product demand. Such lower demand may affect our customers, in which case

the demand for our products may decline and our growth could be adversely affected.

- 16 -

Revenues derived from sales of our military products are subject to military planning, strategies and funding by U.S. and European governments and could be adversely affected by changing government policies.

We in part rely on sales to customers who do business with U.S. and European governments. Reduced funding by these governments for ongoing defense procurement and research and development programs could result in cancelled or delayed contracts or lower sales of military products, all of which could adversely affect our operations, cash flow and ability to grow.

Our operating results may vary from quarter to quarter.

Our operating results have in the past been subject to quarter to quarter fluctuations, and we expect that these fluctuations will continue, and may increase in magnitude, in future periods. Demand for our products is driven by many factors, including the availability of funding for our products in customers' budgets. There is a trend for some of our customers to place large orders near the end of a quarter or fiscal year, in part to spend remaining available budget funds. Seasonal fluctuations in customer demand for our products driven by budgetary and other reasons can create corresponding fluctuations in period-to-period revenues, and we therefore cannot assure you that our results in one period are necessarily indicative of our revenues in any future period. In addition, the number and timing of large individual sales and the ability to obtain acceptances of those sales, where applicable, has been difficult for us to predict, and large individual sales have, in some cases, occurred in quarters subsequent to those we anticipated, or have not occurred at all. The loss or deferral of one or more significant sales in a quarter could harm our operating results. It is possible that in some quarters our operating results will be below the expectations of public market analysts or investors. In such events, or in the event adverse conditions prevail, the market price of our common stock may decline significantly.

We depend on Telkooor Telecom Ltd to design and manufacture many of our products.

We depend on Telkooor Telecom Ltd. ("Telkooor"), our largest shareholder and one of our third party subcontractors, for design and manufacturing capabilities for many of the products which we sell. If Telkooor is unable or unwilling to continue designing or manufacturing our products in required volumes on a timely basis, that could lead to loss of sales, and adversely affect our operating results and cash position. We also depend on Telkooor's intellectual property and ability to transfer production to third party manufacturers. Failure to obtain new products in a timely manner or delay in delivery of product to customers will have an adverse effect on our ability to meet our customers' expectation. In addition, we operate in highly competitive markets where our ability to sell Telkooor's products could be adversely affected by long lead-times and high costs of Telkooor's products.

Conditions in Israel may limit our ability to receive and sell products. This could decrease our revenues.

Telkooor's principal offices, research and development, and manufacturing facilities are located in Israel. Political, economic, and military conditions in Israel directly affect their operations. We could be adversely affected by any major hostilities involving Israel, the interruption or curtailment of trade between Israel and its trading partners, a significant increase in inflation, or a significant downturn in the economic or financial conditions of Israel. Restrictive laws or policies directed towards Israel or Israeli businesses could adversely affect us.

Our reliance on third parties to manufacture certain aspects of our products involves risks, including delays in product shipments and reduced control over product quality.

Since we do not own significant manufacturing facilities, we must rely on, and will continue to rely on, a limited number of outside parties to manufacture parts, components, and equipment. Our reliance upon such third party contractors involve several risks, including reduced control over manufacturing costs, delivery times, reliability, quality of components, unfavorable currency exchange fluctuations, and continued inflationary pressures on many of

the raw materials used in the manufacturing of our products. If we were to encounter a shortage of key manufacturing components from limited sources of supply, or experience manufacturing delays caused by reduced manufacturing capacity, inability of our contract manufacturers to procure raw materials, the loss of key assembly subcontractors, difficulties associated with the transition to our new contract manufacturers or other factors, we could experience lost revenues, increased costs, delays in, cancellations or rescheduling of orders or shipments, any of which would materially harm our business.

- 17 -

We face intense industry competition, price erosion and product obsolescence, which, in turn, could reduce our profitability.

We operate in an industry that is generally characterized by intense competition. We believe that the principal bases of competition in our markets are breadth of product line, quality of products, stability, reliability and reputation of the provider, along with cost. Quantity discounts, price erosion, and rapid product obsolescence due to technological improvements are therefore common in our industry as competitors strive to retain or expand market share. Product obsolescence can lead to increases in unsaleable inventory that may need to be written off and therefore could reduce our profitability. Similarly, price erosion can reduce our profitability by decreasing our revenues and our gross margins. In fact, we have seen price erosion over the last several years on most of the products we sell, and we have factored additional price erosion into our forecasts.

We depend on sales of our legacy products for a meaningful portion of our revenues, but these products are mature and their sales will continue to decline.

A large portion of our sales have historically been attributable to our legacy products. We expect that these products may continue to account for a meaningful percentage of our revenues for the foreseeable future. However, these sales are declining. Although we are unable to predict future prices for our legacy products, we expect that prices for these products will continue to be subject to significant downward pressure in certain markets for the reasons described above. Accordingly, our ability to maintain or increase revenues will be dependent on our ability to expand our customer base, increase unit sales volumes of these products and to successfully, develop, introduce and sell new products. We cannot assure you that we will be able to expand our customer base, increase unit sales volumes of existing products or develop, introduce and/or sell new products.

The sale of our products is dependent on our ability to respond to rapid technological change, including evolving industry-wide standards, and may be adversely affected by the development, and acceptance by our customers, of new technologies which may compete with or reduce the demand for our products.

Rapid technological change, including evolving industry standards, could render our products obsolete. To the extent our customers adopt such new technology in place of our products, the sales of our products may be adversely affected. Such competition may also increase pricing pressure for our products and adversely affect the revenues from such products.

The sale of our products is dependent upon our ability to satisfy the proprietary requirements of our customers.

We depend upon a relatively narrow range of products for the majority of our revenue. Our success in marketing our products is dependent upon their continued acceptance by our customers. In some cases, our customers require that our products meet their own proprietary requirements. If we are unable to satisfy such requirements, or forecast and adapt to changes in such requirements, our business could be materially harmed.

If we are unable to satisfy our customers' specific product quality, certification or network requirements, our business could be disrupted and our financial condition could be harmed.

Our customers demand that our products meet stringent quality, performance and reliability standards. We have, from time to time, experienced problems in satisfying such standards. Defects or failures have in the past, and may in the future occur relating to our product quality, performance and reliability. From time to time, our customers also require us to implement specific changes to our products to allow these products to operate within their specific network configurations. If we are unable to remedy these failures or defects or if we cannot affect such required product modifications, we could experience lost revenues, increased costs, including inventory write-offs, warranty expense

and costs associated with customer support, delays in or cancellations or rescheduling of orders or shipments and product returns or discounts, any of which would harm our business.

- 18 -

If we ship products that contain defects, the market acceptance of our products and our reputation will be harmed and our customers could seek to recover their damages from us.

Our products are complex, and despite extensive testing, may contain defects or undetected errors or failures that may become apparent only after our products have been shipped to our customers and installed in their network or after product features or new versions are released. Any such defect, error or failure could result in failure of market acceptance of our products or damage to our reputation or relations with our customers, resulting in substantial costs for both us and our customers as well as the cancellation of orders, warranty costs and product returns. In addition, any defects, errors, misuse of our products or other potential problems within or out of our control that may arise from the use of our products could result in financial or other damages to our customers. Our customers could seek to have us pay for these losses. Although we maintain product liability insurance, it may not be adequate.

Our future results are dependent on our ability to establish, maintain and expand our distribution channels and our existing third-party distributors.

We market and sell our products through domestic and international OEM relationships. Our future results are dependent on our ability to establish, maintain and expand third party relationships with OEM as well as other marketing and sales distribution channels. If, however, the third parties with whom we have entered into such OEM and other arrangements should fail to meet their contractual obligations, cease doing, or reduce the amount of their business with us or otherwise fail to meet their own performance objectives, customer demand for our products could be adversely affected, which would have an adverse effect on our revenues.

We may not be able to procure necessary key components for our products, or we may purchase too much inventory or the wrong inventory.

The power supply industry, and the electronics industry as a whole, can be subject to business cycles. During periods of growth, key components required to build our products may become unavailable in the timeframe required for us to meet our customers' demands. Our inability to secure sufficient components to build products for our customers could negatively impact our sales and operating results. We may choose to mitigate this risk by increasing the levels of inventory for certain key components. Increased inventory levels can increase the potential risk for excess and obsolescence should our forecasts fail to materialize or if there are negative factors impacting our customers' end markets. If we purchase too much inventory or the wrong inventory, we may have to record additional inventory reserves or write-off the inventory, which could have a material adverse effect on our gross margins and on our results of operations.

We depend on international sales for a portion of our revenues.

Sales to customers outside of North America accounted for 63% of net revenues during the six months ending June 30, 2008, and we expect that international sales will continue to represent a portion of our total revenues. International sales are subject to the risks described above as well as generally longer payment cycles, greater difficulty collecting accounts receivable, and currency restrictions. We also have a wholly-owned foreign subsidiary, Digital Power Ltd., doing business as Gresham Power Electronics, in the United Kingdom, to support European and other international customers, distributors, and sales representatives, which is subject to local regulation. In addition, international sales are subject to the export laws and regulations of the United States and other countries.

We are subject to certain governmental regulatory restrictions relating to our international sales.

Some of our products are subject to ITAR, which is administered by the U.S. Department of State. ITAR controls not only the export of certain products specifically designed, modified, configured or adapted for military systems, but also the export of related technical data and defense services as well as foreign production. We recently participated in

the U.S. government's voluntary disclosure program to notify the government of potential export compliance issues that we discovered and to take corrective actions to ensure that we obtain required export licenses and to otherwise comply with ITAR. We have taken such corrective actions and believe that we now have the necessary licenses for any exports subject to the ITAR. However, if the corrective actions were to fail or be ineffective for a prolonged period of time or if the process of obtaining required export licenses for products subject to the ITAR is delayed, it could have a materially adverse effect on our business, financial condition, and/or operating results. Changes in United States export laws that require us to obtain additional export licenses or delays in obtaining export licenses currently being sought sometimes cause significant shipment delays and, if such delays are too great, could result in the cancellation of orders. Any future restrictions or charges imposed by the United States or any other country on our international sales or foreign subsidiary could have a materially adverse effect on our business, financial condition, and/or operating results. In addition, from time to time, we have entered into contracts with the Israeli Ministry of Defense which were funded with monies subject to, and we therefore were required to comply with the regulations governing, the U.S. Foreign Military Financing program.

- 19 -

We depend on international operations for a substantial majority of our components and products.

We purchase a substantial majority of our components from foreign manufacturers and have a substantial majority of our commercial products assembled, packaged, and tested by subcontractors located outside the United States. These activities are subject to the uncertainties associated with international business operations, including trade barriers and other restrictions, changes in trade policies, governmental regulations, currency exchange fluctuations, reduced protection for intellectual property, war and other military activities, terrorism, changes in social, political, or economic conditions, and other disruptions or delays in production or shipments, any of which could have a materially adverse effect on our business, financial condition, and/or operating results.

We are dependent upon our ability to attract, retain and motivate our key personnel.

Our success depends on our ability to attract, retain and motivate our key management personnel, including our CEO and CFO, and key engineers, necessary to implement our business plan and to grow our business. Despite the adverse economic conditions of the past several years, competition for certain specific technical and management skill sets is intense. If we are unable to identify and hire the personnel that we need to succeed, or if one or more of our present key employees were to cease to be associated with us, our future results could be adversely affected. Furthermore, we have recently experienced a number of changes in our senior management positions, both as part of restructuring initiatives and otherwise. Although we believe we have taken appropriate measures to address the impact of these changes, there is the risk that such changes could impact our business, which could negatively affect operating results.

Our limited ability to protect our proprietary information and technology may adversely affect our ability to compete, and our products could infringe upon the intellectual property rights of others, resulting in claims against us the results of which could be costly.

Many of our products consist entirely or partly of proprietary technology owned by us. Although we seek to protect our technology through a combination of copyrights, trade secret laws, contractual obligations and patents, these protections may not be sufficient to prevent the wrongful appropriation of our intellectual property, nor will they prevent our competitors from independently developing technologies that are substantially equivalent or superior to our proprietary technology. In addition, the laws of some foreign countries do not protect our proprietary rights to the same extent as the laws of the United States. In order to defend our proprietary rights in the technology utilized in our products from third party infringement, we may be required to institute legal proceedings. If we are unable to successfully assert and defend our proprietary rights in the technology utilized in our products, our future results could be adversely affected.

Although we attempt to avoid infringing known proprietary rights of third parties in our product development efforts, we may become subject to legal proceedings and claims for alleged infringement from time to time in the ordinary course of business. Any claims relating to the infringement of third-party proprietary rights, even if not meritorious, could result in costly litigation, divert management's attention and resources, require us to reengineer or cease sales of our products or require us to enter into royalty or license agreements which are not advantageous to us. In addition, parties making claims may be able to obtain an injunction, which could prevent us from selling our products in the United States or abroad.

If our accounting controls and procedures are circumvented or otherwise fail to achieve their intended purposes, our business could be seriously harmed.

We evaluate our disclosure controls and procedures as of the end of each fiscal quarter, and are annually reviewing and evaluating our internal controls over financial reporting in order to comply with SEC rules relating to internal control over financial reporting adopted pursuant to the Sarbanes-Oxley Act of 2002. Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate. If we fail to maintain effective internal control over financial reporting or our management does not timely assess the adequacy of such internal control, we may be subject to regulatory sanctions and our reputation may decline.

Our common stock price is volatile.

Our common stock is listed on the American Stock Exchange and is thinly traded. In the past, our trading price has fluctuated widely, depending on many factors that may have little to do with our operations or business prospects. Further, the exercise of outstanding options and warrants may adversely affect our stock price and a shareholder's percentage of ownership. As of June 30, 2008, we had outstanding employees' options to purchase 930,190 shares of common stock, with a weighted average exercise price of \$1.15 exercisable at prices ranging from \$0.48 to \$3.03 per share, and consultants' and service providers' options and warrants to purchase 220,000 shares of common shares, with a weighted average exercise price of \$1.10, exercisable at prices ranging from \$0.55 to \$1.19.
