Safe Harbor

Certain statements contained in this material are forward-looking statements. These forward-looking statements are based on the current expectations of the management of Oramed only, and are subject to a number of factors and uncertainties that could cause actual results to differ materially from those described in the forward-looking statements, including the risks and uncertainties related to the progress, timing, cost, and results of clinical trials and product development programs; difficulties or delays in obtaining regulatory approval or patent protection for our product candidates; competition from other pharmaceutical or biotechnology companies; and our ability to obtain additional funding required to conduct our research, development and commercialization activities, and others, all of which could cause the actual results or performance of Oramed to differ materially from those contemplated in such forward-looking statements. Except as otherwise required by law, Oramed undertakes no obligation to publicly release any revisions to these forward-looking statements to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events. For a more detailed description of the risks and uncertainties affecting Oramed, reference is made to Oramed's reports filed from time to time with the Securities and Exchange Commission, which involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the company, or industry results, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. Please refer to the company's filings with the Securities and Exchange Commission for a comprehensive list of risk factors that could cause actual results, performance or achievements of the company to differ materially from those expressed or implied in such forward-looking statements. Oramed undertakes no obligation to update or revise any forward-looking statements.

Free Writing Prospectus Statement

This presentation highlights basic information about us and the offering. Because it is a summary, it does not contain all of the information that you should consider before investing.

We have filed a registration statement (including a prospectus dated March 22, 2013 and a preliminary prospectus supplement dated June 17, 2013) with the SEC for the offering to which this communication relates. Before you invest, you should read the prospectus in that registration statement, the related preliminary prospectus supplement and other documents we have filed with the SEC for more complete information about us and this offering. You may get these documents for free by visiting EDGAR on the SEC Web site at [www.sec.gov](http://www.sec.gov). Alternatively, we, any underwriter or any dealer participating in the offering will arrange to send you the prospectus and preliminary prospectus supplement if you request it by calling Aegis Capital Corp., Prospectus Department, 810 Seventh Avenue, 18th Floor, New York, NY 10019, telephone: 212-813-1010, e-mail: [prospectus@aegiscap.com](mailto:prospectus@aegiscap.com) or Maxim Group LLC, 405 Lexington Avenue, 2nd Floor, New York, NY 10174, toll-free telephone: 1-800-724-0761

Offering Summary

Issuer	Oramed Pharmaceuticals Inc.
Exchange / Ticker	NASDAQ Capital Market / ORMP
Offering Size	Approximately \$13 million (100% Primary)
Over-allotment	15% (100% Primary)
Use of Proceeds	Clinical development of ORMD-0801 and ORMD-0901, working capital & general corporate purposes
Book-Runners	Aegis Capital Corp and Maxim Group LLC

16

1 Blood glucose - insulin secretion system forms  
a 'closed-loop'

1 Peripheral insulin promotes glucose uptake in  
fat and muscle

1 First-pass hepatic metabolism extracts 80% of  
secreted insulin

1 Systemic exposure is minimized

Portal insulin delivery is physiologic.

Systemic insulin delivery is not.

pancreas

portal vein

liver

---

17

Initial Treatment:

- Lifestyle Modification
  - Diet & Exercise

Single & Combination Oral

Therapies:

- ORMD-0801
- Reduce insulin resistance
- Stimulate insulin secretion

Final Treatment:

- Insulin Replacement

ORMD-0801 is not a substitute for insulin injections, but rather a new earlier treatment option

Stages of Type 2 Diabetes

Criteria for advancing to next stage:

A1C not at target < 7.0%

Preclinical - Pigs

Phase II Study (ex-US):

Design: Multi-centered, placebo-controlled, randomized, double-blinded, 29 T2DM patient study to evaluate safety and tolerability of one bedtime orally administered ORMD-0801 formulation (2 capsules containing 8 mg insulin each) as well as its effectiveness in providing glycemic control.

---

T2DM Clinical Results  
23

---

Results:

Safety:

- First extended exposure to ORMD-0801 proved safe and tolerable.
  - No serious adverse events reported.
  - No cumulative effects were observed.
- Only two hypoglycemic events were recorded - both were mild.

Efficacy:

- Reduced glycemia & inflammatory markers
- Percentage of patients demonstrating clinically relevant reductions in insulin, c-peptide, fasting blood glucose (FBG), and Hb1Ac levels was higher in the ORMD-0801 cohort, compared to the placebo.

Glucose

Results: Subcutaneous exenatide delivery amounted to a 51% reduction in mean glucose AUC0-150, while formulations AG4 and AG3 prompted 43% and 29% reductions, respectively (\* p = 0.068, demonstrating a treatment-related trend for the sample size).

ORMD-0901 formulations preserved the biological activity of orally delivered exenatide. ORMD-0901 successfully curbed blood sugar excursions following glucose challenge.

Methods:

- Ø Healthy, fasting, cannulated dogs
- Ø Single dose ORMD-0901 formulations
- Ø Administered 30 minutes before a glucose challenge.
- Ø Blood samples collected every 15 minutes.
