17% Increase in Sequential EPS

Hsin-Chu, Taiwan, R.O.C., April 30, 2004 Taiwan Semiconductor Manufacturing Company, Ltd. said today that it expects 2004 will set new records for revenue and net income. Revenues from the first quarter ended March 31, 2004 reached NT\$57.51 billion while net income and fully diluted earnings per share came to NT\$18.79 billion and NT\$0.93 per share (US\$0.14 per ADS unit), respectively.

On a sequential basis, first quarter results, which were published on Tuesday, represented a 0.5% decrease in revenue, a 17.4% increase in net income and fully diluted EPS. All figures were prepared in accordance with R.O.C. GAAP on an unconsolidated basis.

Despite a 4.0% increase in wafer shipments, a 3.2% decline in wafer average selling price (ASP) combined with a 1.5% weaker U.S. dollar exchange rate brought first quarter revenue to a level similar to 4Q03. Gross Margin for the quarter improved slightly to 39.5% from 39.3% in the previous quarter due to higher utilization levels. Net Margin for the quarter improved substantially to 32.7% compared to 27.7% previously.

Lora Ho, TSMC vice president and chief financial officer, said TSMC's first quarter marks the beginning of a year where we believe TSMC will once again deliver record-breaking financial performance in terms of both top-line and bottom-line results.

Ho also said that, based upon the current business outlook, management's expectations for second quarter 2004 performance are:

- Wafer shipments to increase by close to 10 percent sequentially;
- ASP to improve by a low single digit percentage point sequentially;
- Overall utilization rate may exceed 105 percent;
- Gross profit margin will jump a few points;
- Revenues from advanced technologies (defined as 0.13 um and below) to exceed 25% of wafer sales;
- Demand to increase strongly in the Consumer segment, modestly for the Communication segment, but decline modestly in the Computer segment.

Remarks:

EPS of NT\$0.93 for 1Q04 represents a 17% increase compared with 4Q03. The operating results of 1Q04 are summarized below:

Net sales of NT\$57.5 billion remained almost even with 4Q03, resulting from a 4% increase in wafer shipments, a 3.2% decrease in wafer ASP, and an unfavorable foreign exchange.

Gross profit improved sequentially to NT\$22.7 billion driven by higher capacity utilization. Gross margin improved to 39.5% from 39.3% in 4Q03.

Operating expenses of NT\$5.2 billion decreased 14.7% sequentially. Lower research and development expenditures were the main reason behind the decrease. R&D expenditures in the latest quarter returned to a level of roughly 5% of net sales, absent a one-time royalty payment related to the development activities in 65 nm technologies, which occurred in 4Q03.

Net gain from non-operating items amounted to NT\$895 million, representing a NT\$48 million decline on a sequential basis. During 1Q04 operating performance by TSMC's subsidiary/affiliates improved, and hedging costs were lower. However, the Company did not realize any capital gains from the disposal of venture capital equity investments during the quarter as it did previously.

Income before tax rose 4.9% sequentially to NT\$18.4 billion. Provision for tax expense was NT\$2.3 billion, and the Company booked a NT\$2.7 billion investment tax credit. TSMC's 1Q04 net income increased 17.4% to NT\$18.8 billion while net margin improved to 32.7% from 27.7% sequentially.

Revenue Analysis:

Net sales of NT\$57.5 billion were 0.5% lower than the NT\$57.8 billion recorded in 4Q03. The sequential change in TSMC net sales was attributable to 4.0% higher wafer shipments, offset partially by 3.2% lower average selling price in U.S. dollar terms and a 1.5% appreciation in NT dollar.

Communication applications continued to drive revenue during the quarter, while Consumer applications revenue also increased. Computer applications were impacted by a seasonal decrease in demand.

Demand from advanced technologies, defined as 0.13-micron and below, strengthened in 1Q04. Revenue from advanced technology wafers improved to 20% from 18% of the Company's total wafer sales in the quarter.

Revenue from the IDM segment strengthened to 30% of wafer sales during the quarter versus 29% in 4Q03.

On a geographical basis, the weightings for Asia and European markets improved while the percentage of Japanese sales declined.

Revenue contributed by TSMC's subsidiary/affiliates amounted to nearly 13% (NT\$7.4 billion) of net sales during the quarter versus 12% (NT\$7.2 billion) in 4Q03.

ASP Trend:

Average selling price in U.S. dollars declined 3.2% sequentially, albeit at a slower rate than that of the previous quarter. The price erosion occurred as TSMC continued to honor previous commitments.

V-3. Capital Commitment and Capacity Highlights

- Actual 1Q04 capital expenditure: US\$489 million.
- Estimated 2004 capacity (excluding VIS): to be above 4.8 million wafers at 8 -equivalent, 19% growth year-over-year.

Summary of Cash Flow:

During 1Q04, TSMC generated NT\$32.7 billion operating cash inflow mainly from net income and depreciation.

Net cash used in investing activities totaled NT\$23.9 billion, including acquisitions of fixed assets in the amount of NT\$16.4 billion and increases in short-term investments of NT\$7.3 billion, mainly for purchasing government bonds. Under a share buyback program, the Company had spent NT\$0.5 billion in the latest quarter. This and the return of guarantee deposits to a few customers constituted the NT\$0.6 billion net financing uses.

TSMC ended the quarter with NT\$15.5 billion more cash and short-term investments. Cash increased by NT\$8.2 billion while short-term investments went up by NT\$7.3 billion sequentially.

Operating Cash Flow Trend:

Operating cash flow of NT\$32.7 billion was 4% higher than the previous quarter, largely due to higher net income.

Capital Spending:

TSMC's capital expenditures during the quarter totaled US\$489 million, 31% higher than the previous quarter. Most of the spending was for 12-inch capacity ramp-up in Fab 12 and Fab 14.

TSMC remains fully committed to providing capacity that meets both the fabrication and technological needs of its customers. 2004 planned capacity is 4.8 million wafers at 8-inch equivalent, resulting in 19% year-over-year growth.
