MESSAGE TO SHAREHOLDERS

FROM THE INVESTMENT ADVISOR

Dear Shareholder,

The first quarter of 2007 saw a marked increase in the volatility of almost all financial markets in Asia. Following a relatively benign January, sharp sell-offs occurred throughout the region in late February. This increase in volatility follows four consecutive years of generally positive returns for Asian investors and particularly strong equity markets in India and China. While investors remain optimistic about the long-term prospects for both countries, concern has been raised that in the short term, further measures may be necessary to slow the recent pace of economic growth. In addition to growth concerns in China and India, the region was faced with the prospect of rising interest rates in Japan, which in turn led to speculation that the so called "carry trade" was likely to be unwound, leading to increased volatility in the Japanese yen and Japanese securities. The quarter as a whole ended with mixed results across the region, with the primary Japanese indices showing modest gains.

For the nine funds that comprise the Matthews Asian Funds, five fell during the quarter, while the other four showed gains. Relative performance was also mixed, with only two of the funds outperforming their benchmarks during the quarter. The Funds continue to focus on their long-term objectives. As advisors we believe that while there are always short-term challenges, the long-term prospects for continued economic development across the region remain quite positive.

The initial catalyst for the market corrections that occurred in February was widely ascribed to a sharp, one-day sell-off on the Shanghai stock exchange that occurred in late February. While a small number of international institutional investors are licensed to invest directly in domestic Chinese stock markets, for the most part they remain "walled off" from the outside world by a combination of capital controls and strict regulatory limits on ownership. For this reason,

2 MATTHEWS ASIAN FUNDS

Table of Contents

MARCH 31, 2007

the idea that a movement on a domestic exchange in China could create a ripple effect around the globe is a relatively recent one, one that we believe reflects the rapid evolution of China's financial system and its emergence as a global economic power. The number of ways in which capital can flow across the Chinese border is growing exponentially and adding to the pressure on the mainland authorities to allow the Chinese currency to float. The experience of other Asian countries that have gone through this process would suggest that as China gets closer to full currency convertibility, the short-term challenges of managing the transition will increase, adding to market volatility. Some of the same issues are facing other Asian countries, including India, which are a sign of enormous progress in recent years but continue to present many challenges.

The first quarter of 2007 saw interest rates increased in Japan, China and India, as well as a number of the region's smaller countries, reflecting concerns that the pace of growth in those countries was likely to lead to further inflationary pressures. For the most part, forecasters are reducing their expectations for the pace of economic growth over the next several quarters, partly in response to recent policy actions in Asia and partly out of concern for the recent slowdown in the U.S. housing market and its potential impact on Asian exports. Within the region, the continued impact of rising raw material prices was of concern to many companies that were visited by the Funds' portfolio managers during the quarter; but for the most part, corporate management in Asia remains optimistic about the region and its prospects. The recent relative performance of the South Korean domestic economy has presented a more challenging environment for domestic companies, and the political uncertainties in Thailand have continued to weigh on sentiment there. We continue to believe that valuations, in general,

MESSAGE TO SHAREHOLDERS

around the region are reasonable relative to growth prospects, and we have made no major shifts in investment strategy or policy.

We are pleased to announce that effective April 30, 2007, Taizo Ishida and David Ishibashi became Co Lead Managers of the Matthews Japan Fund.

Thank you for your investment in the Matthews Asian Funds.

G. Paul Matthews

REDEMPTION FEE POLICY

The Funds assess a redemption fee of 2.00% of the total redemption proceeds if you sell or exchange your shares within 90 calendar days after purchasing them. The redemption fee is paid directly to the Funds and is designed to discourage frequent short-term trading and to offset transaction costs associated with such trading of Fund shares. For purposes of determining whether the redemption fee applies, the shares that have been held longest will be redeemed first. The redemption fee does not apply to redemptions of shares held in certain omnibus accounts and retirement plans that cannot currently implement the redemption fee. While these exceptions exist, the Funds are not accepting any new accounts that cannot implement the redemption fee or provide adequate alternative controls. For more information on this policy, please see the Funds prospectus.

INVESTOR DISCLOSURE

Past Performance: All performance quoted in this report is past performance and is no guarantee of future results. Investment return and principal value will fluctuate with changing market conditions so that when redeemed, shares may be worth more or less than their original cost. Current performance may be lower or higher than the returns quoted. Returns are net of the Funds' management fee and other operating expenses. If certain of the Funds' fees and expenses had not been waived, returns would have been lower. For the Funds' most recent month-end performance, please call 1-800-789-ASIA [2742] or visit www.matthewsfunds.com.

Investment Risk: Mutual fund shares are not deposits or obligations of, or guaranteed by, any depository institution. Shares are not insured by the FDIC, Federal Reserve Board or any government agency and are subject to investment risks, including possible loss of principal amount invested. Investing in international markets may involve additional risks, such as social and political instability, market illiquidity, exchange-rate fluctuations, a high level of volatility and limited regulation. In addition, single-country and sector funds may be subject to a higher degree of market risk than diversified funds because of concentration in a specific industry, sector or geographic location. Please see the Funds' prospectus and Statement of Additional Information for more risk disclosure.

Fund Holdings: The portfolios shown in this report should not be relied upon as complete listings of the Funds' holdings, as information on particular holdings may have been withheld if it was in the Funds' interest to do so. Holdings are subject to change at any time, so holdings shown in this report may not reflect current Fund holdings. The Funds file complete schedules of portfolio holdings with the Securities and Exchange Commission (the SEC) for the first and third quarters of each fiscal year on Form N-Q. The Funds' Form N-Q is filed with the SEC within 60 days of the end of the quarter to which it relates, and is available on the SEC's website at www.sec.gov. It may also be reviewed and copied at the Commission's Public Reference Room in Washington, D.C. Information on the operation of the Public Reference Room may be obtained by calling 800-SEC-0330.

Proxy Voting Record: The Funds' Statement of Additional Information containing a description of the policies and procedures that the Matthews Asian Funds use to vote proxies relating to portfolio securities, along with each Fund's proxy voting record relating to portfolio securities held during the 12-month period ended June 30, 2006, is available upon request, at no charge, at the Funds' website at www.matthewsfunds.com or by calling 1-800-789-ASIA [2742], or on the SEC's website at www.sec.gov.

This report has been prepared for Matthews Asian Funds shareholders. It is not authorized for distribution to prospective investors unless accompanied or preceded by a current Matthews Asian Funds prospectus, which contains more complete information about the Funds' investment objectives, risks and expenses. You should read the prospectus carefully before investing. Additional copies of the prospectus may be obtained by calling 800-789-ASIA [2742] or by visiting www.matthewsfunds.com. Please read the prospectus carefully before you invest or send money, as it explains the risks associated with investing in international markets. These include risks related to social and political instability, market illiquidity and currency volatility.

The Matthews Asian Funds are distributed by PFPC Distributors, Inc., 760 Moore Road, King of Prussia, PA 19406.

MATTHEWS ASIA PACIFIC FUND

FUND DESCRIPTION

SYMBOL: MPACX

Under normal market conditions, the Matthews Asia Pacific Fund seeks to achieve its investment objective by investing at least 80% of its total net assets, which include borrowings for investment purposes, in the common and preferred stocks of companies located in the Asia Pacific region. The Asia Pacific region includes Australia, China, Hong Kong, India, Indonesia, Japan, Malaysia, New Zealand, Pakistan, Philippines, Singapore, South Korea, Taiwan, Thailand and (as of April 30, 2007) Vietnam. The Fund may also invest in the convertible securities, of any duration or quality, of Asia Pacific companies.

PORTFOLIO MANAGES

Lead Manager: **Mark W. Headley**

Co-Managers: **Richard H. Gao, Taizo Ishida and Sharat Shroff, CFA**

PORTFOLIO MANAGER COMMENTARY

For the three months ended March 31, 2007, the Matthews Asia Pacific Fund declined 1.12%, underperforming its benchmark, the MSCI All Country Asia Pacific Index, which gained 3.59%. The Lipper Pacific Region Funds Category Average returned 4.22% for the same period. Following strong appreciation late last year, some of the Chinese financials in the portfolio have been relatively weaker year-to-date.

The performance of the equity markets across the region was quite mixed: On one hand, markets in Singapore and Malaysia recorded handsome gains, while the benchmark indices in China, India and Taiwan edged lower by about 3%. India was the worst-performing market in the region, dragged lower by the prospect of rising inflation and firming interest rates. The continued strength in credit growth is forcing the Reserve Bank of India to accelerate rate hikes. Similar trends were seen in China, although the government's efforts to restrain investment and lending growth have not proven to be particularly successful. The tightening monetary policies being pursued in both these economies led to a volatile period, particularly for stocks in the financials and real estate sectors.

The Fund's Korean holdings in the pharmaceuticals and consumer sectors were lackluster during the quarter. Consumer spending is slow to recover, but sentiment may receive a boost given the prospect of moderating interest rates. In the long term, the signing of the Free Trade Accord (FTA) with the United States should help Korean industry become more competitive, although the short-term impact on sectors like media and pharmaceuticals is uncertain.

ALL DATA IS AS OF MARCH 31, 2007, UNLESS OTHERWISE NOTED

PORTFOLIO MANAGER COMMENTARY *continued from page 6*

Meanwhile, the recovery in Japan was underway as the Bank of Japan (BOJ) raised interest rates in February by 0.25%, following a previous rate hike in July 2006. The yen temporarily appreciated by 4% to 115 yen to the dollar, but it quickly returned to the level where it ended last quarter. Toward the end of the first quarter, more important data came out: Japan's 2007 land prices showed their first year-over-year gain 0.4% after 15 years of consecutive declines. The Fund's holdings in the real estate sector positively contributed to performance in Japan, but its holdings in technology and retail hurt Fund performance.

In terms of changes to the portfolio, Daibiru was added to the Fund during the quarter. One of the largest real estate companies in Osaka Japan's second-largest city Daibiru is one of the most conservative real estate companies in Japan, but it has been actively investing in large-scale projects in the area. While we are seeing a rapid pace of rising rents in some select spots in Tokyo, the market has overlooked their prospects in the rest of the country. We believe that the stock will be one of the largest beneficiaries of potential rising rents in Osaka, which have been lagging those in Tokyo, and the stock is attractively priced.

We continue to steer the portfolio toward domestically oriented companies benefiting from private consumption. In that context, it is notable that the Chinese government recently passed new laws aimed at bolstering private-property rights. If properly enforced, the derivative impact of land ownership may be a boost to private consumption spending. In the long term, this may offset the economy's dependence on exports and investment. The coming months may test Asia's ability to decouple from a global slowdown, particularly in the U.S., although the slack may be at least partly offset by growing intra-regional trade. We continue to look for opportunities that will arise from greater engagement between some of the leading economies in the Asia Pacific region.

MATTHEWS ASIA PACIFIC EQUITY INCOME FUND

FUND DESCRIPTION

SYMBOL: MAPIX

Under normal market conditions, the Matthews Asia Pacific Equity Income Fund seeks to achieve its investment objective by investing at least 80% of its total net assets, which include borrowings for investment purposes, in income-paying publicly traded common stocks, preferred stocks, convertible preferred stocks, and other equity-related instruments (including, for example, investment trusts and other financial instruments) of companies located in the Asia Pacific region, which includes Australia, China, Hong Kong, India, Indonesia, Japan, Malaysia, New Zealand, Pakistan, Philippines, Singapore, South Korea, Taiwan, Thailand and Vietnam.

PORTFOLIO MANAGERS

Lead Manager: **Andrew T. Foster**

Co-Manager: **Jesper Madsen, CFA**

PORTFOLIO MANAGER COMMENTARY

The Matthews Asia Pacific Equity Income Fund returned 2.42% for the first quarter of 2007; its benchmark, the MSCI All Country Asia Pacific Index, gained 3.59%. Volatility returned to markets across the Asia Pacific region during the quarter, with equity markets not only in Asia, but globally, experiencing a short but sharp sell-off at the end of February. During times of sharp market declines, the correlation across markets and often across asset classes tends to increase. The Fund experienced this firsthand as the value of the portfolio fell broadly in line with the MSCI All Country Asia Pacific Index during the sell-off.

The Fund's relative underperformance vis-à-vis its benchmark during the quarter was predominantly a result of the portfolio's underweight to Australia, one of the region's better-performing markets, and its overweight to Hong Kong and Taiwan, two relative laggards. The Fund is not bound by the benchmark, and its distinct focus on dividend-paying companies leads to substantial over- or underweights as compared to the benchmark, often resulting in divergent performance.

The portfolio continues to have a substantial 18% allocation to Japanese companies. This allocation is considerably less than the benchmark's weight of 55%, but given the low dividend yields prevalent there, it may seem counterintuitive to have any exposure to Japan. However, we continue to find Japanese companies attractive for investors seeking growing dividends. The Fund's Japanese holdings, most of which paid their final dividends during the quarter, on average grew their annual dividends by a healthy 30% year-on-year. Many Japanese companies are growing dividends from a low base, having paid little attention to dividend policies in years past, but the mixture of earnings growth and increasing payout ratios offers the potential for continued

PORTFOLIO MANAGER COMMENTARY *continued from page 12*

dividend growth. So, while the absolute level of dividend payments in Japan remains low, especially in relation to earnings, it is the pace of change in dividends that continues to impress us.

The Fund's dual focus on dividend growth and current yield often leads us to invest in companies that are perceived by the market to face either unattractive growth prospects or challenging business conditions. While this perception may at times be correct, especially in the short term, we believe that companies are often discounted in excess of their true growth potential. The former Hongkong and Shanghai Banking Corporation, known today as HSBC, illustrates this point. While the extent and pace of HSBC's losses in its U.S. sub-prime mortgage lending business are a cause of concern, the market seems to have latched on to one facet of what is otherwise a global business with a considerable footprint in fast-growing emerging economies across the world. In 2006, HSBC derived almost 40% of its pre-tax profits from Asia, and these profits were 23% higher than in 2005. Furthermore, HSBC has a history of paying growing dividends, even during periods of slower earnings growth, and its balance sheet remains healthy. In 2006, while earnings per share grew by just 3% due in large part to the provisioning related to its sub-prime mortgage lending the company still raised its dividend payment by a healthy 11%. With an estimated yield of 5% and an attractive global footprint, which we believe offers great potential for future growth, we continue to view HSBC as a core holding for the Fund.

Our aim is to strike the right balance between constructing a portfolio that provides current yield while being invested in companies that will deliver consistent dividend growth. This becomes especially challenging when equity values rise, as we experienced in some markets in the region during this quarter such as Singapore, Malaysia and Australia. That said, we believe that companies in the Asia Pacific region continue to offer good potential for both current income and healthy dividend growth.

MATTHEWS PACIFIC TIGER FUND (CLOSED TO MOST NEW INVESTORS)

FUND DESCRIPTION

SYMBOL: MAPTX

Under normal market conditions, the Matthews Pacific Tiger Fund seeks to achieve its investment objective by investing at least 80% of its total net assets, which include borrowings for investment purposes, in the common and preferred stocks of companies located in the Pacific Tiger countries of China, Hong Kong, India, Indonesia, Malaysia, Philippines, Singapore, South Korea, Taiwan, Thailand and (as of April 30, 2007) Vietnam.

PORTFOLIO MANAGERS

Lead Manager: **Mark W. Headley**

Co-Manager: **Richard H. Gao**

PORTFOLIO MANAGER COMMENTARY

The Matthews Pacific Tiger Fund had a lack-luster return of 0.72% in the first quarter of 2007, versus the MSCI All Country Far East ex-Japan Index's return of 1.46% and the MSCI All Country Asia ex-Japan Index's return of 1.04%. The first index is the Fund's historical benchmark; the second was added several years ago, given its inclusion of the increasingly important Indian market. The Lipper Pacific ex-Japan Funds Category Average returned 3.40% for the quarter, which was notable for its volatility.

The portfolio saw strong returns from a number of consistent performers from the past few years of positive returns. Hang Lung Group has grown to be one of the largest positions in the Fund. As a long-established Hong Kong property holding company, the group has gone aggressively into China, with impressive results so far. NHN Corporation continues to define itself as one of Asia's most unique Internet companies, maintaining its position within its home market in Korea and expanding to neighboring markets competently. The industrial sector of the portfolio performed well, with a recovery in the Singaporean water filtration company Hyflux and continued strong performance of Fraser and Neave, largely due to its property exposure in Singapore. Singapore was a notable area of strength for the portfolio as a whole.

On a country basis, the portfolio was hurt by negative returns from Korea and India. Indonesia also saw a pullback across most holdings. Most other markets showed little direction for the quarter as a whole but generally recovered from the sharp fall in late February. The new positions in Malaysia have so far been a modest positive addition. On a sector basis, consumer and health care related companies were a significant negative for the portfolio: both are areas in which the portfolio is significantly overweight relative to the regional benchmarks. The Fund has always been willing to build major positions

in market areas where benchmarks may have very little weighting. When these areas underperform, we have historically continued to increase their positions. This can lead to significant volatility and periods of very off-benchmark performance.

Looking across the region at the end of a challenging quarter, it is something of a relief that the markets appear to be taking risk more seriously or at least talking a great deal about it. With rising interest rates in China and India, where in some cases valuations are quite stretched, the Fund continues to have a diversified portfolio and is only building new positions with some caution. New holdings have been added in Korea, Indonesia and China, all of smaller- and medium-sized companies. While the world continues to express concern over the uncertainty in both the Middle East and the U.S. economy, overall conditions in Asia appear reasonably healthy. The obvious threat within the region would be a major problem of some sort in China. Japan's economy is still hardly appreciated despite its continued strength, and India is still too isolated to cause broad problems, in our opinion. Overall, the Fund is continuing its long search for exceptional Asian companies that define the future of the world's most-important region.

MATTHEWS ASIAN GROWTH AND INCOME FUND (CLOSED TO MOST NEW INVESTORS)

FUND DESCRIPTION

SYMBOL: MACSX

Under normal market conditions, the Matthews Asian Growth and Income Fund seeks to achieve its investment objective by investing at least 80% of its total net assets, which include borrowings for investment purposes, in dividend-paying equity securities and the convertible securities, of any duration or quality, of companies located in Asia. Asia includes China, Hong Kong, India, Indonesia, Japan, Malaysia, Pakistan, Philippines, Singapore, South Korea, Taiwan, Thailand and (as of April 30, 2007) Vietnam.

PORTFOLIO MANAGERS

Lead Manager: **G. Paul Matthews**

Co-Manager: **Andrew T. Foster**

PORTFOLIO MANAGER COMMENTARY

For the first quarter of 2007, the Matthews Asian Growth and Income Fund returned 2.46% while its benchmark, the MSCI All Country Far East ex-Japan Index, rose 1.46%. The Lipper Pacific ex-Japan Funds Category Average gained 3.40% over the same period.

Asian markets began the quarter much as they finished the prior one: Most were characterized by relative stability, and many continued to steadily appreciate in value. However, these conditions were reversed by the end of February, when a sharp sell-off in domestic Chinese equities appeared to trigger a global correction. Whether events in China or other factors were the root cause behind the decline in global equities is debatable. What is clear in either case is that many market participants were poised to sell after a period of prolonged stability. Despite

All performance quoted is past performance and is no guarantee of future results. Assumes reinvestment of all dividends and/or distributions. Unusually high returns may not be sustainable. Investment return and principal value will fluctuate with changing market conditions so that shares, when redeemed, may be worth more or less than their original cost. The performance of foreign indices may be based on different exchange rates than those used by the Fund and, unlike the Fund's NAV, is not adjusted to reflect fair value at the close of the NYSE. Current performance may be lower or higher than the return figures quoted. Returns are net of the Funds' management fee and other operating expenses. Returns would have been lower if certain of the Funds' fees and expenses had not been waived. For the Funds' most recent month-end performance please call 800-789-ASIA [2742] or visit www.matthewsfunds.com.

¹ The MSCI All Country Far East ex-Japan Index is a free float adjusted market capitalization weighted index of the stock markets of China, Hong Kong, Indonesia, Malaysia, Philippines, Singapore, South Korea, Taiwan and Thailand. The Matthews Asian Growth and Income Fund invests in countries that are not included in the MSCI All Country Far East ex-Japan Index. It is not possible to invest directly in an index. Source: Index data from Morgan Stanley Capital International; total return calculations performed by PFPC Inc.

² Calculated from 8/31/94.

³ As of 3/31/07, the Lipper Pacific ex-Japan Funds Category Average consisted of 50 funds for the three-month period, 48 funds for the one-year period, 47 funds for the three-year period, 43 funds for the five-year period, 23 funds for the 10-year period, and 12 funds since 8/31/94. Lipper, Inc. fund performance does not reflect sales charges and is based on total return, including reinvestment of dividends and capital gains, for the stated periods.

⁴ The 30-day SEC Yield represents net investment income earned by the Fund over the 30-day period ended 3/31/07, expressed as an annual percentage rate based on the Fund's share price at the end of the 30-day period. The SEC Yield should be regarded as an estimate of the Fund's rate of investment income, and it may not equal the Fund's actual income distribution rate, the income paid to a shareholder's account, or the income reported in the Fund's financial statements. Past yields are no guarantee of future yields.

⁵

Edgar Filing: MATTHEWS INTERNATIONAL FUNDS - Form N-30B-2

The Income Distribution Yield represents the past two dividends (does not include capital gains) paid by the Fund for the period ended 3/31/07, expressed as an annual percentage rate based on the Fund's share price on 3/31/07. Generally, the Fund has made distributions of net investment income twice each year and of capital gains, if any, annually. Past Income Distribution Yields are no guarantee of future yields or that any distributions will continue to be paid twice each year.

⁶ Matthews Asian Funds do not charge 12b-1 fees.

⁷ Unaudited.

⁸ Includes management fee, administration and shareholder services fees after reimbursement, waiver or recapture of expenses by Advisor. Voluntary fee waivers by the Advisor may be discontinued at any time.

⁹ The lesser of fiscal year-to-date purchase costs or sales proceeds divided by the average monthly market value of long-term securities.

PORTFOLIO MANAGER COMMENTARY *continued from page 24*

this renewed volatility, however, most major Asian markets finished the quarter with positive returns; only India (down 3.6%), Hong Kong and Taiwan (each down less than 1%) posted negative returns.

Amidst this environment, we were relatively pleased with the Fund's performance. The Fund outpaced its benchmark index, yet it did so with a lower degree of volatility: Daily price variations in the Fund were only about three-quarters of those of the MSCI All Country Far East ex-Japan Index.

An examination of the quarter's top-contributing positions yields interesting results. Nine of the top 10 contributors derive the bulk of their economic value from property or real estate. From a fundamental perspective, that sector's health has been mixed. Interest rates in the region's largest markets have generally risen in the past few quarters. This has raised borrowing costs, and it may crimp some companies' ability to borrow easily. Meanwhile, evidence of landlords' ability to increase rents to offset such costs has been uneven. Rents in Singapore have fared well, though from a depressed base; the going has been tougher in other markets.

Nevertheless, investors' appetite for real estate in the region continued unabated. This was particularly evident in the performance of Japanese REITs (real estate investment trusts). The Fund has held stakes in Japanese REITs since 2003 and continues to hold four REITs today. By country, Japan was the top contributor to Fund performance as a result of the combined performance of its REIT positions. This was somewhat out of keeping with the Fund's composition: It has historically carried a relatively small weighting in Japan (roughly 7% as of March 31, 2007). Japanese REITs were also notable in that they have recently become some of the Fund's most volatile positions. This, in part, is because the market has begun to hope for improved rents, on the back of a much-improved commercial real estate market in Tokyo and other major metropolitan areas. However, the REITs' volatility may also be symptomatic of the uncertainty that hangs over the forward path of interest rates in Japan.

The Fund's composition was largely unchanged during the quarter. It exited some of its holdings in corporate bonds to take advantage of lower valuations in dividend-paying common stocks amidst the sell-off that occurred during the quarter. The Fund also lowered its weighting in convertible bonds, having converted three larger bonds that were nearing maturity. The growth of the Asian convertible bond universe has remained lackluster; however, we hold out hope that new issuers—including the recently arrived private-equity investors in the region—will open up this market once again.

MATTHEWS ASIAN TECHNOLOGY FUND

FUND DESCRIPTION

SYMBOL: MATFX

Under normal market conditions, the Matthews Asian Technology Fund seeks to achieve its investment objective by investing at least 80% of its total net assets, which include borrowings for investment purposes, in the common and preferred stocks of companies located in Asia that derive greater than 50% of their revenues from the sale of products or services in technology-related industries and services. Asia includes China, Hong Kong, India, Indonesia, Japan, Malaysia, Pakistan, Philippines, Singapore, South Korea, Taiwan, Thailand and (as of April 30, 2007) Vietnam.

Matthews considers technology-related industries and businesses to include, but not be limited to, the following: telecommunications, telecommunications equipment, computers, semiconductors, semiconductor capital equipment, networking, Internet and online service companies, media, office automation, server hardware producers, software companies (e.g., design, consumer and industrial), biotechnology and medical device technology companies, pharmaceuticals and companies involved in the distribution and servicing of these products.

PORTFOLIO MANAGERS

Lead Manager: **J. Michael Oh**

Co-Manager: **Mark W. Headley**

PORTFOLIO MANAGER COMMENTARY

For the three-month period ended March 31, 2007, the Matthews Asian Technology Fund declined 0.88%, slightly underperforming the MSCI/Matthews Asian Technology Index, which lost 0.27%, and the Lipper Science and Technology Funds Category Average, which gained 1.22%.

The Asian technology sector had a relatively weak start in the first quarter of the year as prices of key products declined and demand for consumer electronics was generally weak during the quarter.

The Fund gained most from its positions in the telecommunications sector, which continued to outperform the information technology sector following its strong outperformance last year. The expectation of increasing yield in the Japanese telecommunication sector and fast-growing subscriber numbers in emerging markets such as India and China contributed to the sector's strong performance. The overall valuation of the telecommunication services sector in the developed countries of the region remains attractive.

The technology hardware and equipment industry was the worst performer during the quarter due to concerns over declining prices and weak demand for key consumer electronics. The first quarter of the year is typically a slow season for consumer electronics sales, as consumers do most of their spending in the last quarter of the year. The semiconductor industry was the second-worst performer in the Fund, mainly due to falling DRAM (dynamic random access memory) prices. DRAM product prices decreased in part due to capacity expansion, as some DRAM manufacturers have

PORTFOLIO MANAGER COMMENTARY *continued from page 32*

converted their production lines from flash memory products back to DRAM production.

On a company basis, the largest contributor during the quarter was NHN, South Korea's dominant Internet search, casual game and portal. NHN recorded strong growth last year, and a positive growth outlook for the current year contributed to its strong performance. Sony was the second-largest contributor to Fund performance. The company has been restructuring its consumer electronics business and benefited from improved profitability. Sony is expected to continue its restructuring efforts in various areas, and the outlook for the current fiscal year's earnings remains positive.

Samsung Electronics was the worst performer in the Fund; the company has been mainly hurt by declining prices of DRAM products and increasing competition in the handset business.

By country, overall returns were strongest in India and Singapore, while the Fund's positions in Taiwan and Korea were the largest drag on Fund performance. Taiwanese and Korean technology companies lagged other countries due to their broad exposure to the hardware and memory industries. Taiwanese technology companies have large exposure to the PC, notebook and other consumer electronic hardware manufacturing services industries, and Korea is home to the world's largest and second-largest DRAM manufacturers. Despite the Indian market's overall weak performance during the quarter, the Fund's holdings performed well, making India the largest contributor to Fund performance during the period.

The Fund made a few changes in the Internet, information technology services and health care sectors during the quarter. The Fund continues to overweight China, India and Korea and underweight Japan; it is underweight in the diversified telecommunication services sector while taking a selective overweight position in the wireless telecommunication services industry in emerging countries in the region compared to the benchmark. The Fund continues to look for long-term opportunities in a broad range of technology industries that we believe are poised to benefit from increasing demand from Asian consumers and overall growth in the Asia Pacific region.

MATTHEWS CHINA FUND

FUND DESCRIPTION

SYMBOL: MCHFX

Under normal market conditions, the Matthews China Fund seeks to achieve its investment objective by investing at least 80% of its total net assets, which include borrowings for investment purposes, in the common and preferred stocks of companies located in China. China includes its political, administrative and other districts, such as Hong Kong.

PORTFOLIO MANAGERS

Lead Manager: **Richard H. Gao**

Co-Managers: **Mark W. Headley** and **G. Paul Matthews**

PORTFOLIO MANAGER COMMENTARY

The Matthews China Fund gained 3.44% for the first quarter of 2007, outperforming its benchmark MSCI China Index, which was down 2.30%. The Fund also outperformed the Lipper China Region Funds Category Average, which gained 3.00% for the same period.

After a huge rally in 2006, Chinese equities became extremely volatile during the first quarter of 2007. While China's economic fundamentals remained generally solid and corporate earnings growth was strong, investors were more concerned about stock market valuations and the tightening measures taken by the Chinese central bank to prevent the economy from overheating. Meanwhile, with more H shares listed in the domestic A-share market, the relationship among the domestic A shares and the Hong Kong listed H shares and Red Chips is increasing. Any major movements in the domestic stock market are having a bigger impact on Chinese equities listed in Hong Kong than in the past. During the quarter, the A-share market experienced extreme volatility after reaching historical high levels. As a result, Hong Kong listed Chinese shares were affected, also experiencing high volatility. The MSCI China Index fell sharply in the first two months of the quarter but recovered most of its losses in March.

The Fund saw most of its gains in the industrials, consumer discretionary and materials sectors. Industrial and materials companies have become the key beneficiaries of China's strong overall economy, driven in large part by investment growth. Some of the industrial companies that provided strong positive returns for the portfolio included transportation companies, port operators, airlines, airports, and builders of roads and bridges. China's huge demand for and capacity constraints of container board and cement also drove up performance of the two materials companies in the portfolio. On the negative side, the Fund's positions in the financials

PORTFOLIO MANAGER COMMENTARY *continued from page 38*

and energy sectors provided most of its losses. Financial stocks were under severe selling pressure during the quarter, after accumulating enormous gains last year.

The Fund's relative underweighting in the financials and energy sectors helped it outperform its benchmark index. The Fund's holdings in small- and mid-cap companies also outperformed the benchmark's holdings during the quarter.

The Chinese central bank raised its reserve ratio for the fifth time in the past eight months and also raised interest rates for the third time in the past year. It is expected that the central bank will continue its tightening policy to prevent the economy from overheating. While controlling investment growth, the government has been encouraging domestic consumption growth to achieve a more balanced and sustainable growth pattern and to rely less on investments and exports. This is in line with our belief that domestic consumption will become the driving force of China's economic growth.

The Fund made few changes to its portfolio and remains diversified, with overweight positions in the consumer, financials and industrials sectors. We did slightly trim the Fund's holdings in the financials sector, as we believe that valuations there are still relatively high. We also increased our position in the utilities sector as costs appear to be stabilizing.

MATTHEWS INDIA FUND

FUND DESCRIPTION

SYMBOL: MINDX

Under normal market conditions, the Matthews India Fund, a non-diversified fund, seeks to achieve its investment objective by investing at least 80% of its total net assets, which include borrowings for investment purposes, in publicly traded common stocks, preferred stocks and convertible securities of companies located in India.

PORTFOLIO MANAGERS

Lead Manager: **Andrew T. Foster**

Co-Manager: **Sharat Shroff, CFA**

PORTFOLIO MANAGER COMMENTARY

For the first quarter of 2007, the Matthews India Fund declined 4.27%, while its benchmark, the Bombay Sensex Exchange 100 Index fell 3.62%. The Lipper Emerging Markets Funds Category Average gained 2.33% over the same period.

Changes in expectations for inflation and interest rates dominated the market's action during the quarter. As we have noted for more than a year now, inflationary pressures have been building across the country, most notably for raw materials, agricultural products and wages. However, productivity gains in the economy had generally kept these price pressures in check. Yet early in the first quarter, the most broadly followed measure of inflation—the wholesale price index, or WPI—showed an annual increase of about 6.5%. This figure is well above the central bank's espoused comfort zone, which lies between 5% and 5.5%. (On a side note: India does not have a well-established nationwide measure of consumer price inflation; thus, many market participants look to WPI as a substitute—albeit a flawed one.)

After ignoring the gathering inflation for the better part of 2006, the country's authorities exhibited a newfound resolve to stomp out perceived excess. An upcoming election in one of India's most populous states has focused attention on the issue: The poorest segments of society have struggled to keep pace with rising costs, especially for basic staples. The ruling government fears that the dissatisfaction will spill over to the polls and is keen to bring the situation under control—which could have unpredictable consequences.

The market got its first surprise when the Reserve Bank of India (RBI) enacted two rate increases during the quarter. The second of these increases caught the market largely off guard, having been announced at the close of trading on the last day of the quarter. The government has also utilized more-blunt means to reign in price speculation in selected industries: Explicit regulation

PORTFOLIO MANAGER COMMENTARY *continued from page 46*

and implicit moral suasion have sought to curtail price hikes in energy, sugar, wheat, cement, steel and mortgages rates. The government's efforts are certainly well-intended - meant to keep living costs affordable - yet in the end they may produce unpredictable and possibly opposite results.

Amid this environment, corporate earnings still appear healthy, though their growth will likely moderate from the extremely high rates seen during the prior two quarters. Capital expenditures are beginning to rise again - a healthy sign given that excess capacities in many industries are nearly exhausted. Meanwhile, some consumer industries are facing headwinds, given that consumer credit growth is moderating as banks shift their focus to finance corporate growth. Borrowing rates for consumers have risen sharply in the past few months, and this may crimp spending for certain large-ticket consumer durable products; motorcycle sales, for instance, have lagged as of late. However, despite these shorter-term constraints, we believe that the economic outlook for the country remains quite positive, particularly as households continue to experience substantial income gains and material improvements in their quality of life. We continue to look for stocks that can participate in this sort of growth - tapping into the strength of rising wealth and growth across the breadth of India's populace.

MATTHEWS JAPAN FUND

FUND DESCRIPTION

SYMBOL: MJFOX

Under normal market conditions, the Matthews Japan Fund seeks to achieve its investment objective by investing at least 80% of its total net assets, which include borrowings for investment purposes, in the common and preferred stocks of companies located in Japan.

PORTFOLIO MANAGERS

Note: Managers shown reflect changes effective April 30, 2007.

Lead Managers: **David Ishibashi** and **Taizo Ishida**

PORTFOLIO MANAGER COMMENTARY

For the quarter ended March 31, 2007, the Matthews Japan Fund gained 0.93%, underperforming its benchmarks, the MSCI Developed Markets Japan Index and the TOPIX Index, which gained 3.56% and 3.76%, respectively. The Lipper Japanese Funds Category Average returned 1.16% for the same period.

The Japanese market began the quarter strongly but hit a bump when global equities corrected in late February. Although most other Asian markets quickly recovered and have since exceeded their previous highs, the Japanese market lagged for the quarter. Over the period, indices of new markets, such as Mothers and Hercules, were down more than the TOPIX as a result of a prolonged concern over last year's questionable financial accounting practices and related scandals.

During the quarter, the market was very keen to find out whether the Bank of Japan (BOJ) would raise interest rates. The BOJ disappointed the market in January by keeping its rate unchanged, but it finally raised it a much-anticipated 0.25% in February. The yen appreciated by 4% to 115 yen to the dollar, but it quickly fell back to the level it held at the end of last quarter. For this quarter, the exchange rate was unchanged and had little impact on exporters.

Japan's 2007 land prices, the other closely watched macro statistic, was a delight to the market: It showed the first year-over-year positive gain 0.4% after 15 years of consecutive declines. More importantly, land prices in many areas of major metropolitan cities (Tokyo, Osaka, Nagoya) jumped anywhere from 40% to 50%. The Fund's holdings in the real estate sector were a beneficiary of this rising trend in Japan's land prices.

Looking at sector performance, the best performer was telecom, followed by energy, industrials and utilities. The Fund participated in the telecom sector through its position in KDDI, Japan's second-largest wireless operator, with a growing market

share. Because of its focus on the domestic economy and services, the Fund typically invests in the consumer discretionary and financial sectors, but we are taking advantage of attractive valuations and good fundamentals in other parts of the market.

Two new additions to the portfolio during the quarter were Park24, which focuses on the utilization of idle land in productive ways, and Funai Zaisan, a consulting firm specializing in financial solutions.

Park24 is Japan's largest developer and operator of time-rental parking spaces and parking lots nationwide. The company has expanded throughout Japan as a result of its strong development capabilities and a steady supply of idle land amid 15 years of depressed property prices. The company has been able to secure prime locations in major city centers as well as outlying regional areas. In addition, the company has begun to manage parking lots on behalf of land owners such as banks, shopping centers and large-scale retail outlets.

As the first major wave of the post-war baby boomers begins to retire, the need for financial advisory services is growing sharply, much like in the United States in the early 1980s. Funai Zaisan is engaged in developing solutions for some of the most onerous areas of taxation for both high-net-worth individuals and corporations (in which the owner/founder is the largest shareholder), and in the areas of inheritance, corporate revitalization, and the effective utilization of land holdings. The company is able to procure its clients through a network of 46 offices nationwide, as well as its relationships with the largest CPA firms in Japan.

Overall, we believe that the portfolio is well positioned to benefit from the continued recovery of the Japanese economy and its increasing integration with its Asia Pacific neighbors.

MATTHEWS KOREA FUND

FUND DESCRIPTION

SYMBOL: MAKOX

Under normal market conditions, the Matthews Korea Fund, a non-diversified fund, seeks to achieve its investment objective by investing at least 80% of its total net assets, which include borrowings for investment purposes, in the common and preferred stocks of companies located in South Korea.

PORTFOLIO MANAGERS

Lead Managers: **G. Paul Matthews** and **Mark W. Headley**

Co-Manager: **J. Michael Oh**

PORTFOLIO MANAGER COMMENTARY

For the three-month period ended March 31, 2007, the Matthews Korea Fund declined 4.66%, underperforming its benchmark index, which gained 0.23%, and the Lipper Pacific ex-Japan Funds Category Average, which gained 3.40%.

After a market dip in January, the South Korean market began to recover its losses as a Free Trade Agreement (FTA) with the United States was finalized and its relationship with North Korea improved. Foreign selling pressure also eased during the quarter as the overall valuation of the Korean market became attractive. Exports continued to show stronger-than-expected growth during the first quarter despite the won's continuing strength. The government's approval rating rose as a result of the adoption of the FTA. We believe that the FTA will have a positive long-term impact on the Korean economy, although the short-term impact could be mixed. Domestic sentiment remained weak during the quarter due to weak corporate spending in the market. Korean corporations continue to invest more overseas due to investment restrictions around the Seoul metropolitan area.

The Fund's underperformance of its benchmark for the period was primarily due to its underweight position in the industrials sector, particularly in shipbuilding and construction. The shipbuilding industry had a strong first quarter as ship prices rose and overseas orders increased. The construction industry performed well on the back of expectations that restrictions on new developments could be eased. The Fund's performance was also hurt by its health care exposure; the sector was under pressure from the expectation that the FTA would have a negative impact on Korean pharmaceutical companies. The FTA is expected to increase foreign competition in the Korean pharmaceutical industry and may delay Korean generic drug makers from releasing new drugs.

All performance quoted is past performance and is no guarantee of future results. Assumes reinvestment of all dividends and/or distributions. Unusually high returns may not be sustainable. Investment return and principal value will fluctuate with changing market conditions so that shares, when redeemed, may be worth more or less than their original cost. The performance of foreign indices may be based on different exchange rates than those used by the Fund and, unlike the Fund's NAV, is not adjusted to reflect fair value at the close of the NYSE. Current performance may be lower or higher than the return figures quoted. Returns are net of the Funds' management fee and other operating expenses. Returns would have been lower if certain of the Funds' fees and expenses had not been waived. For the Funds' most recent month-end performance please call 800-789-ASIA [2742] or visit www.matthewsfunds.com.

Table of Contents

ALL DATA IS AS OF MARCH 31, 2007, UNLESS OTHERWISE NOTED

PORTFOLIO MANAGER COMMENTARY *continued from page 60*

The largest contribution to Fund performance came from the financials sector, which performed strongly on attractive valuations and improved profitability. The energy and materials sectors also made positive contributions to Fund performance.

On a company basis, Kookmin Bank was the largest contributor to Fund performance. The largest retail bank in Korea, Kookmin Bank's profitability improved over the past year, primarily due to an increase in fee-related revenue. The second-largest contribution came from NHN, the dominant player in the Internet search, casual games and portal industry in Korea. NHN recorded strong growth during the last fiscal year, and a positive outlook for the current fiscal year contributed to its strong performance.

Samsung Electronics was the worst performer during the period. Prices of DRAM (dynamic random access memory) products declined, and increased competition in the handset business contributed to its poor performance. SK Telecom, Korea's largest wireless telecommunications operator, was the second worst performer for the quarter; competition among local wireless operators is increasing as companies roll out new 3G services. The sector's valuation remains among the lowest in the region.

Tensions between North Korea and its neighbors improved during the quarter as North Korea agreed to remove its nuclear facilities in exchange for economic subsidies from its neighbors. However, North Korea still remains one of the key risks to investing in South Korea, and any deteriorating relationship with North Korea could result in increased volatility in the South Korean market and throughout the region. Exports remain a key growth driver in the South Korean economy, and further strengthening of its currency could negatively impact exports and, hence, the overall Korean economy.

During the quarter, the Fund made a few changes in the industrials, consumer and health care sectors. The Fund remains primarily focused on three sectors: consumer, financials and information technology. It remains underweight in cyclical industries such as shipbuilding.

NOTES TO SCHEDULES OF INVESTMENTS

SIGNIFICANT ACCOUNTING POLICIES (UNAUDITED)

A. SECURITY VALUATION: The Funds' equity securities are valued based on market quotations or at fair value as determined in good faith by or under the direction of the Board of Trustees (the Board) when no market quotations are available or when market quotations have become unreliable. The Board has delegated the responsibility of making fair value determinations to the Pricing Committee of Matthews International Capital Management, LLC, subject to the Funds' Pricing Policies. The Board has retained a third-party pricing service which may be utilized by the Pricing Committee under circumstances described in the Pricing Policies to provide fair value prices for certain securities held by the Funds. When fair value pricing is employed, the prices of securities used by a Fund to calculate its NAV differ from quoted or published prices for the same securities for that day. All fair value determinations are made subject to the Board's oversight.

The books and records of the Funds are maintained in U.S. dollars. Transactions denominated in foreign currencies are recorded at the current prevailing exchange rates. All assets and liabilities denominated in foreign currencies are translated into U.S. dollars at the current exchange rate. Translation gains or losses resulting from changes in the exchange rate during the reporting period and realized gains and losses on the settlement of foreign currency transactions are reported in the results of operations for the current period. The Funds do not isolate that portion of gains and losses on investment in equity securities which is due to changes in the foreign exchange rate from that which is due to changes in market prices of equity securities. International dollar bonds are issued offshore, pay interest and principal in U.S. dollars, and are denominated in U.S. dollars.

Market values for equity securities are determined based on the last sale price on the principal exchange or over-the-counter market on which the security is traded. If a reliable last sale price is not available, market values for equity securities are determined using the mean between the last available bid and asked price. Securities are valued through valuations obtained from a commercial pricing service or at the most recent mean of the bid and asked prices provided by investment dealers in accordance with procedures established by the Board.

Foreign securities are valued as of the close of trading on the primary exchange on which they trade. The value is then converted to U.S. dollars using current exchange rates and in accordance with the Pricing Policies.

Foreign currency exchange rates are determined at the close of trading on the New York Stock Exchange, Inc. (NYSE). Occasionally, events affecting the value of foreign investments occur between the time at which they are determined and the close of trading on the NYSE. Such events would not normally be reflected in a calculation of a Funds' NAV on that day. If events that materially affect the value of the Funds' foreign investments occur during such period, the investments will be valued at their fair value as described above.

Foreign securities held by the Funds may be traded on days and at times when the NYSE is closed. Accordingly, the NAV of the Funds may be significantly affected on days when shareholders have no access to the Funds. For valuation purposes, quotations of foreign portfolio securities, other assets and liabilities, and forward contracts stated in foreign currency are translated into U.S. dollar equivalents at the prevailing market rates.

MARCH 31, 2007

B. TAX INFORMATION: Under the current tax law, capital and currency losses realized after October 31 and prior to the Fund's fiscal year end may be deferred as occurring on the first day of the following fiscal year. Post October losses at fiscal year end December 31, 2006 were as follows:

	POST OCTOBER CAPITAL LOSSES	POST OCTOBER CURRENCY LOSSES
Matthews Asia Pacific Equity Income Fund	\$	\$ (5,232)
Matthews Pacific Tiger Fund		(74,412)
Matthews Asian Technology Fund	(12,095)	(79,224)
Matthews China Fund		(542)
Matthews Korea Fund		(31,864)

For Federal income tax purposes, the Funds indicated below have capital loss carryforwards, which expire in the year indicated, as of December 31, 2006, which are available to offset future capital gains, if any:

LOSSES DEFERRED EXPIRING IN:	2008	2009	2010	2011
Matthews Asian Technology Fund	\$ (3,293,471)	\$ (5,967,059)	\$ (3,461,198)	\$
Matthews China Fund				
Matthews India Fund				

LOSSES DEFERRED EXPIRING IN:	2012	2013	2014	Total
Matthews Asian Technology Fund	\$	\$	\$	\$ (12,721,728)
Matthews China Fund	(78,979)	(6,184,085)	(9,072,204)	(15,335,268)
Matthews India Fund			(2,320,226)	(2,320,226)

For additional information regarding the accounting policies of the Matthews Asian Funds, refer to the most recent financial statements in the N-CSR filing at www.sec.gov.
