In a world of high oil prices, the relative value of Tier 1 bulk commodity assets that are close to Asian growth markets is enhanced Source: CRU, BHP Billiton analysis Transparent pricing

In a transparent pricing market the

value to customer of two identical products is fixed, and the supplier is paid that delivered price Impacts of higher oil prices

Freight costs become a much larger component of delivered cost

High freight costs with a variety of distance to market steepens the cost curve

Proximity to market delivers sustainable cost advantage

Regardless of demand impact the incentive to expand production is high for assets which are close to markets
