#### PAIN THERAPEUTICS, INC.

Notes to Condensed Financial Statements

(Unaudited)

#### Note 1. General

Pain Therapeutics, Inc. is a biopharmaceutical company that develops novel drugs. Our lead drug candidate is called Remoxy®. We are developing Remoxy and other abuse-resistant painkillers pursuant to our strategic alliance with King Pharmaceuticals, Inc, or King.

We are also developing novel drug candidates in the area of hematology and oncology. We also have in pre-clinical development a drug candidate to treat hemophilia, a genetic disorder in which patients are unable to stop bleeding. We have in clinical development a monoclonal antibody to treat metastatic melanoma, a deadly form of skin cancer.

Although we were profitable in 2008 based on payments from King and interest income, in the course of our development activities, we have sustained cumulative operating losses. There are no assurances that additional financing will be available on favorable terms, or at all.

We have prepared the accompanying unaudited condensed financial statements of Pain Therapeutics, Inc. in accordance with generally accepted accounting principles for interim financial information and pursuant to the instructions to Form 10-Q and Article 10 of Regulation S-X. Accordingly, the financial statements do not include all of the information and footnotes required by generally accepted accounting principles for complete financial statements. In our opinion, all adjustments, consisting of normal recurring adjustments, considered necessary for a fair presentation have been included. Operating results for the three and nine months ended September 30, 2009 are not necessarily indicative of the results that may be expected for any other interim period or for the year ending December 31, 2009.

We have evaluated subsequent events through the date of the filing this Form 10-Q with the Securities and Exchange Commission. No material subsequent events have occurred since September 30, 2009 that require recognition or disclosure in these financial statements.

#### **Note 2. Significant Accounting Policies**

#### Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires that management make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amount of revenue earned and expenses incurred during the reporting period. Actual results could differ from those estimates.

6

#### Revenue Recognition and Deferred Program Fee Revenue

Revenue is recognized when there is persuasive evidence that an arrangement exists, delivery has occurred, the price is fixed and determinable, and collection is reasonably assured.

We and King have a strategic alliance to develop and commercialize Remoxy and up to three other opioid painkillers designed to reduce potential risks of unintended use. In connection with the strategic alliance, we recognize program fee revenue, collaboration revenue and milestone revenue. Program fee revenue is derived from the upfront payment received from King in December 2005 and is recognized ratably over our estimate of the development period of the four drug candidates expected to be developed under the strategic alliance with King. We currently estimate the development period for all four expected drug candidates to extend through September 2014. We review the estimated development period on a quarterly basis and change it if appropriate based upon our latest expectations. Deferred program fee revenue represents the amount of the upfront payment that has not yet been recognized as revenue.

Collaboration revenues from reimbursement of development expenses are generally recognized when King has completed its review of the expenses invoiced to them.

King is obligated to pay us milestone payments contingent upon the achievement of certain substantive events in the clinical development of Remoxy and the other opioid painkillers under the strategic alliance. We recognize milestone payments from King as revenue when we achieve the underlying developmental milestone as the milestone payments are not dependent upon any other future activities or achievement of any other future milestones and the achievement of each of the developmental milestones were substantively at risk and contingent at the effective date of the collaboration. Substantial effort is involved in achieving each of the developmental milestones. These milestones represent the culmination of discrete earnings processes and the amount of each milestone payment is reasonable in relation with the level of effort associated with the achievement of the milestone. Each milestone payment is non-refundable and non-creditable when made. The ongoing research and development services being provided to King under the collaboration are priced at fair value based upon the reimbursement of expenses incurred pursuant to the collaboration with King.

#### Cash, Cash Equivalents and Concentration of Credit Risk

We consider all highly liquid financial instruments with original maturities of three months or less to be cash equivalents. Cash and cash equivalents consist of cash maintained at two financial institutions and in money market funds. We believe the financial risks associated with these instruments are minimal. We have not experienced material losses from our investments in these securities.

#### Marketable Securities and Fair Value Measurements

We invest in interest bearing marketable securities, generally consisting of corporate and government securities. We may elect to sell these investments before they mature. Therefore, we hold these investments as available for sale and include these investments in our balance sheets as current assets, even though the contractual maturity of a particular investment may be beyond one year. We report our marketable securities at fair value, which may include unrealized gains

7

#### **Table of Contents**

and losses. Our unrealized gains and losses on investments are recorded as a separate component of stockholders—equity as accumulated other comprehensive income or loss. We recognize all realized gains and losses on our available-for-sale securities in interest income in the accompanying statement of operations on a specific identification basis. Our marketable securities are maintained at two financial institutions and are governed by our investment policy as approved by our Board of Directors.

To date we have not recorded any impairment charges on marketable securities related to other-than-temporary declines in market value. We would recognize an impairment charge when the decline in the estimated fair value of a marketable security below the amortized cost is determined to be other-than-temporary. We consider various factors in determining whether to recognize an impairment charge, including the duration of time and the severity to which the fair value has been less than our amortized cost, any adverse changes in the investees financial condition and our intent to sell or whether it is more likely than not that we would be required to sell the marketable security before its anticipated recovery.

We measure our cash equivalents and marketable securities at fair value on a recurring basis and have significant observable inputs where there are identical or comparable assets in the market to use in establishing our fair value measurements. We use significant observable inputs that include but are not limited to benchmark yields, reported trades, broker/dealer quotes and issuer spreads. We consider these inputs to be Level 2 inputs. Generally, the types of instruments we invest in are not traded on a market such as the NASDAQ Global Market, which we would consider to be Level 1 inputs. We do not have any investments that would require inputs considered to be Level 3. We use the bid price to establish fair value.

#### **Stock-based Compensation**

We recognize expense in the statement of operations for the fair value of all share-based payments to employees and directors, including grants of employee stock options and other share based awards. For stock options, we use the Black-Scholes option valuation model and the single-option award approach and straight-line attribution method. Using this approach, the compensation cost is amortized on a straight-line basis over the vesting period of each respective stock option, generally four years. We estimate forfeitures and adjust this estimate periodically based on the extent to which future actual forfeitures differ, or are expected to differ, from such estimates.

We have granted share-based awards that vest upon achievement of certain performance criteria, or Performance Awards. The value of these awards is the product of the number of shares of our common stock to be issued under the award multiplied by the fair market value of a share of our common stock on the date of grant. These awards include future performance conditions. We estimate an implicit service period for achieving these performance conditions. Performance Awards vest and common stock is issued on achieving performance conditions. We recognize stock-based compensation expense for Performance Awards when we conclude that achieving a performance condition is probable. We periodically review and update as appropriate our estimates of the implicit service periods and the likelihood of achieving the performance conditions.

8

#### Net Income (Loss) per Share

Basic net income (loss) per share is computed on the basis of the weighted-average number of common shares outstanding for the reporting period. Diluted net income per share is computed on the basis of the weighted-average number of common shares outstanding plus dilutive potential common shares outstanding using the treasury-stock method. Potential dilutive common shares consist of outstanding stock options, restricted stock units and warrants.

The numerators and denominators in the calculation of basic and diluted net income (loss) per share were as follows (in thousands except per share data):

	Three Months Ended September 30, 2009 2008		Nine Mon Septem 2009	
Numerators:	2009	2000	2009	2000
Net income (loss)	\$ (1,312)	\$ 15,191	\$ (3,170)	\$ 16,736
Denominator:				
Weighted average shares used to compute basic net income (loss) per share	42,201	41,535	42,143	42,318
Effect of dilutive securities:				
Dilution from employee stock plans		1,486		1,246
Potential dilutive common shares		1,486		1,246
Weighted average shares used to compute diluted net income (loss) per share	42,201	43,021	42,143	43,564
Net income (loss) per share:				
Basic	\$ (0.03)	\$ 0.37	\$ (0.08)	\$ 0.40
Diluted	\$ (0.03)	\$ 0.35	\$ (0.08)	\$ 0.38

All options to purchase common shares were excluded from the denominator in the calculation of diluted loss per share for the three and nine months ended September 30, 2009. Options to purchase 5.6 million common shares and 5.0 million common shares were excluded from the denominator in the calculation of diluted net income per share for the three and nine months ended September 30, 2008, as the option exercise price was greater than the average market price per share and the effect would be anti-dilutive.

#### Income Taxes

We make estimates and judgments in determining the need for a provision for income taxes, including the estimation of our taxable income or loss for each full fiscal year. We have accumulated significant deferred tax assets. Deferred income taxes reflect the tax effects of net operating loss and tax credit carryovers and temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. Realization of deferred tax assets is dependent upon future earnings, if any. We are uncertain of the timing and amount of any future earnings. Accordingly, except for \$1.1 million of net deferred tax assets recognized on our balance sheet included in other assets as of September 30, 2009, we offset the net deferred tax assets with a valuation allowance. We may in the future determine that more of our deferred tax assets will likely be realized, in which case we will

reduce our valuation allowance in the quarter in which such determination is made. If the valuation allowance is reduced, we may recognize a benefit from income taxes in our statement of operations in that period. We classify interest recognized as interest expense, when appropriate.

#### Note 3. Cash, Cash Equivalents and Marketable Securities

The following tables summarize our cash, cash equivalents and available-for-sale securities as of September 30, 2009 and December 31, 2008 (in thousands):

	Cash, C	ash I	Equivaleı	ıts aı	nd Marke	table Securitie Estimated	s Av	vailable	for Sale
	Amortized Cost	_	realized Gains	_	realized Josses	Fair Value		crued terest	Total Value
September 30, 2009

Reported as:									
Cash, cash equivalents and money market securities	\$ 153,060	\$		\$		\$ 153,060	\$	98	\$ 153,158
Short term investments	35,988		331		(6)	36,313		624	36,937
	\$ 189,048	\$	331	\$	(6)	\$ 189,373	\$	722	\$ 190,095
Maturities:									
Matures in one year or less Matures one to three years	\$ 189,048	\$	331	\$	(6)	\$ 189,373	\$	722	\$ 190,095
Matares one to thee years	\$ 189,048	\$	331	\$	(6)	\$ 189,373	\$	722	\$ 190,095

Our realized gains or losses during the three and nine months ending September 30, 2009 and 2008 were immaterial. To date we have not recorded any impairment charges on marketable securities related to other-than-temporary declines in market value. We would recognize an impairment charge when the decline in the estimated fair value of a marketable security below the

10

amortized cost is determined to be other-than-temporary. We consider various factors in determining whether to recognize an impairment charge, including the duration of time and the severity to which the fair value has been less than our amortized cost, any adverse changes in the investees financial condition and our intent to sell or whether it is more likely than not that we would be required to sell the marketable security before its anticipated recovery.

The following table presents our assets measured at fair value on a recurring basis at September 30, 2009 (in thousands):

	Level 1	Level 2	Total
Cash, cash equivalents and money market securities	\$	\$ 71,700	71,700
U.S. government obligations		4,099	4,099
Corporate securities		71,605	71,605
Certificates of deposit		30,071	30,071
	\$	\$ 177,475	\$ 177,475

#### **Note 4. Comprehensive Income (Loss)**

Comprehensive income (loss) is the sum of net income (loss) and other comprehensive loss, as follows (in thousands):

		nths Ended iber 30,	Nine Months Ender September 30,	
	2009	2008	2009	2008
Net income (loss)	\$ (1,312)	\$ 15,191	\$ (3,170)	\$ 16,736
Other comprehensive loss	(130)	(648)	(356)	(767)
Comprehensive income (loss)	\$ (1,442)	\$ 14,543	\$ (3,526)	\$ 15,969

Other comprehensive income (loss) consists of net unrealized holding gains and losses on available-for-sale securities.

#### Note 5. Stock-Based Compensation

Our non-cash stock-based compensation expense is as follows (in thousands):

		ree Months Ended Nine Months E September 30, September 3		
	2009	2008	2009	2008
Research and development	\$ 985	\$ 2,855	\$ 2,976	\$ 4,858
General and administrative	687	2,311	1,890	3,543
	\$ 1,672	\$ 5,166	\$ 4,866	\$ 8,401

#### Note 6. Income Taxes

We did not provide for income taxes for the three and nine months ended September 30, 2009 because we have projected a tax loss for the full year 2009. Interest expense and penalties related to unrecognized tax benefits were immaterial for the three and nine months ended September 30, 2009 and 2008.

11

#### **Table of Contents**

We expect to elect to carryback our projected tax loss for 2009 against our taxable income for 2008. We have recorded a benefit from income taxes of \$0.7 million for the nine months ended September 30, 2009 because we expect the carryback of our projected tax loss for 2009 to result in a tax refund in 2010. All of the benefit from income taxes is federal.

#### Note 7. Commitments

We currently lease approximately 41,200 square feet of general office space pursuant to non-cancelable operating leases that will expire in 2010 and 2012. Future minimum lease payments are as follows as of December 31, 2008 (in thousands):

	2009	2010	2011	2012	Total
Future minimum lease payments	\$ 743	\$713	\$ 570	\$ 339	\$ 2,365

#### Note 8. Recently Issued Accounting Pronouncements

In December 2007, the Emerging Issue Task Force issued *Accounting for Collaborative Arrangements*, which applies to collaborative arrangements where no separate legal entity exists and in which the parties are active participants and are exposed to significant risks and rewards that depend on the success of the activity. This pronouncement, among other things, requires certain income statement presentation of transactions with third parties and of payments between parties to the collaborative arrangement, along with disclosure about the nature and purpose of the arrangement. We adopted this pronouncement effective January 1, 2009. Adopting this pronouncement did not have a material affect on our financial statements.

In 2009, the Financial Accounting Standard Board issued the following accounting pronouncements:

Interim Disclosures about Fair Value of Financial Instruments, which require disclosure in the body or in the accompanying notes of the Company summarized financial information for interim reporting periods and in its financial statements for annual reporting periods of the fair value of all financial instruments for which it is practicable to estimate that value, whether recognized or not in the statement of financial position.

Recognition and Presentation of Other-Than-Temporary Impairments, which clarify the interaction of the factors that should be considered when determining whether a debt security is other than temporarily impaired.

Determining Fair Value When the Volume and Level of Activity for the Asset or Liability Have Significantly Decreased and Identifying Transactions That Are Not Orderly, which clarifies the interaction of the factors that should be considered when evaluating whether there has been a significant decrease in the volume and level of activity for an asset or liability when compared with normal market activity for the asset or liability (or similar assets or liabilities). If there has been a significant decrease in the volume and level of activity for the asset or liability, further analysis of the transactions or quoted prices is required, and a significant adjustment to the transactions or quoted prices may be necessary to estimate fair value.

12

Subsequent Events, which establishes the general standards of accounting for and disclosure of subsequent events. In addition, this statement requires disclosure of the date through which an entity has evaluated subsequent events and the basis for that date. We adopted these recently issued accounting pronouncements in the second quarter of 2009. The adoption of these pronouncements did not have a material impact on our financial position, results of operations or cash flows.

13

#### Item 2. Management s Discussion and Analysis of Financial Condition and Results of Operations

This discussion and analysis should be read in conjunction with our financial statements and accompanying notes included elsewhere in this report. Operating results are not necessarily indicative of results that may occur in future periods.

This document contains forward-looking statements that are based upon current expectations, within the meaning of the Private Securities Reform Act of 1995. We intend that such statements be protected by the safe harbor created thereby. Forward-looking statements involve risks and uncertainties and our actual results and the timing of events may differ significantly from the results discussed in the forward-looking statements. Examples of such forward-looking statements include, but are not limited to statements concerning:

timing of resubmission by King Pharmaceuticals, Inc., or King, of the New Drug Application, or NDA, for Remoxy®; potential submission of additional non-clinical data with respect to the Remoxy NDA and that no new clinical efficacy trials will be required by the FDA in connection with the Remoxy NDA; collaboration, milestone and royalty revenue that may be received from King and other payments we may receive from our strategic alliances; the duration of the development period for all four expected drug candidates under our collaboration with King; potential sources of clinical and commercial supply of Remoxy and its components; expansion of our product line, including the formulation of additional dosage forms of Remoxy; expectations regarding timing of completion of preclinical studies with respect to our hemophilia drug candidate; expected amounts of, or fluctuations in, collaboration revenue and payments; future operating losses and anticipated operating and capital expenditures; uses of proceeds from our securities offerings; the potential benefits of our drug candidates; the sufficiency of materials required for the clinical development of our drug candidates; the utility of protection of our intellectual property;

expected future sources of revenue and capital;
potential competitors or competitive products;
future market acceptance of our drug candidates;
fluctuations in our expenses and operating results;
future expectations regarding trade secrets, technological innovations, licensing agreements and outsourcing of certain business functions;
anticipated hiring and development of our internal systems and infrastructure;
potential non-realization of deferred tax assets;
the amount and timing of receipt of tax refunds; and
the sufficiency of our current resources to fund our operations over the next twelve months.

14

Such forward-looking statements involve risks and uncertainties, including, but not limited to, those risks and uncertainties relating to:

difficulties or delays in regulatory approval, production, commercialization, development, testing and clinical trials (including patient enrollment) of our drug candidates;

the successful development of drug candidates pursuant to our collaboration agreements, including our collaboration agreement with King, and the continuation of such agreements;

unexpected adverse side effects or inadequate therapeutic efficacy of our drug candidates that could slow or prevent product approval (including the risk that results of clinical trials may not indicate that our drug candidates are safe and effective) or market acceptance of such products, if approved;

the uncertainty of patent protection for our intellectual property or trade secrets;

potential infringement of the intellectual property rights or trade secrets of third parties;

pursuing in-license and acquisition opportunities;

potential delays in receipt of tax refunds;

hiring and retaining personnel; and

our financial position and our ability to obtain additional financing if necessary.

In addition, such statements are subject to the risks and uncertainties discussed in the Risk Factors section and elsewhere in this document.

#### Overview

Pain Therapeutics, Inc. is a biopharmaceutical company that develops novel drugs. Our lead drug candidate is called Remoxy. Remoxy is a strong painkiller with a unique formulation designed to reduce potential risks of unintended use. We are developing Remoxy and other abuse-resistant painkillers with King. Pursuant to the terms of our strategic alliance, King is obligated to fund development expenses incurred by us for Remoxy and other abuse-resistant painkillers. We will receive a \$15.0 million cash milestone payment from King upon regulatory approval of Remoxy in the U.S. We will also receive a royalty equal to 20% of net sales of drugs developed under this strategic alliance, except as to the first \$1.0 billion in cumulative net sales, for which the royalty is set at 15%.

We and King jointly managed a Phase III clinical program and NDA submission for Remoxy. In mid-2008, the FDA accepted our NDA for Remoxy with Priority Review. In December 2008, we received from the FDA a Complete Response Letter for the NDA for Remoxy. In this Complete Response Letter, the FDA indicated additional non-clinical data is required to support the approval of Remoxy. The FDA has not requested or recommended additional clinical efficacy studies prior to approval. In March 2009, King assumed sole responsibility for the regulatory approval of Remoxy. This shift of responsibility did not change any economic term of our strategic alliance with King. In July 2009, King met with the FDA to discuss Remoxy. As a result of this meeting, King anticipates a resubmission of the Remoxy NDA could occur in 2010.

We are also developing a pipeline of novel drug candidates in the area of hematology and oncology. We own all commercial rights to our pipeline of drug candidates in hematology and oncology.

In hematology, we are developing a drug candidate to treat hemophilia, a genetic disorder in which patients are unable to stop bleeding. The basis for this drug is a novel gene transfer program, developed at Stanford University, aimed at correcting the underlying genetic defect in patients with hemophilia. We expect to complete a preclinical study with this technology in 2009

In oncology, we are developing a novel drug candidate called PTI-188. PTI-188 is a novel radio-labeled monoclonal antibody to treat metastatic melanoma, a deadly form of skin cancer. In 2008, we announced data from a Phase I clinical study using PTI-188. In May 2009, we announced the initiation of another Phase I clinical study with PTI-188 in Israel. The primary objective of this dose-escalation Phase I study is to assess the safety, pharmacokinetics and anti-tumor activity of PTI-188 in patients with metastatic melanoma. We are continuing to enroll patients in this Phase I clinical study.

All of our collaboration, contract and milestone revenues are recognized pursuant to our strategic alliance with King. In 2005, King made an upfront cash payment of \$150.0 million to us. King has made milestone payments to us of \$25.0 million related to clinical and regulatory milestones under the strategic alliance. We could also receive from King up to \$125.0 million in additional milestone payments in the course of clinical development of the opioid painkillers under the strategic alliance. Subject to certain limitations, King is also obligated to fund development expenses incurred by us pursuant to the collaboration agreement. King is obligated to fund the commercialization expenses of, and has the exclusive right to market and sell, drugs developed in connection with the strategic alliance. King is obligated to pay us a 20% royalty on net sales of drugs developed in connection with the strategic alliance, except as to the first \$1.0 billion in cumulative net sales of such drugs, for which the royalty is set at 15%.

Although we were profitable in 2008 based on payments received from King and interest income, we have yet to generate any revenues from product sales. Through September 30, 2009, we have recorded an accumulated deficit of approximately \$117.3 million. These losses have resulted principally from costs incurred in connection with research and development activities, salaries and other personnel-related costs and general corporate expenses. Research and development activities include costs of preclinical and clinical trials as well as clinical supplies associated with our drug candidates. Salaries and other personnel-related costs include non-cash stock-based compensation associated with options and other equity awards granted to employees and non-employees. Our operating results may fluctuate substantially from period to period as a result of the timing and enrollment rates of clinical trials for our drug candidates and our need for clinical supplies.

We expect to continue to use significant cash resources in our operations for the next several years and expect that our cash requirements for operating activities and capital expenditures may increase substantially in the future as we:

continue to conduct preclinical and clinical trials for our drug candidates;
seek regulatory approvals for our drug candidates;
develop, formulate, manufacture and commercialize our drug candidates;
implement additional internal systems and develop new infrastructure;
acquire or in-license additional products or technologies, or expand the use of our technology;
maintain, defend and expand the scope of our intellectual property; and
hire additional personnel.

Product revenue will depend on the ability to receive regulatory approvals for, and successfully market, our drug candidates. If development efforts result in regulatory approval and successful commercialization of drug candidates, we will generate revenue from direct sales of our drugs and, for those of our drugs that are licensed to collaborators, from the receipt of license fees and royalties from sales of licensed products. We conduct our research and development programs through a combination of internal and collaborative programs. We rely on arrangements with universities, our collaborators, contract research organizations and clinical research sites for a significant portion of our product development efforts.

The following table summarizes expenses by category for all of our research and development efforts (in thousands):

		Three Months Ended September 30,		Nine Months Ended September 30,	
	2009	2008	2009	2008	
Compensation	\$ 2,308	\$ 5,832	\$ 7,809	\$ 12,086	
Contractor fees <sup>(1)</sup>	1,433	5,373	6,334	18,491	
Supplies <sup>(2)</sup>	302	757	1,087	2,773	
Other common costs <sup>(3)</sup>	478	966	2,017	3,277	
	\$ 4,521	\$ 12,928	\$ 17,247	\$ 36,627	

- (1) Contractor fees generally include expenses for preclinical studies and clinical trials.
- (2) Supplies generally include costs for formulation and manufacturing activities.
- (3) Other common costs generally include the allocation of common costs such as facilities.

Our technology has been applied across certain of our portfolio of drug candidates. Data, know-how, personnel, clinical results, research results and other matters related to the research and development of any one of our drug candidates may also relate to, and further the development of, our other drug candidates. For example, we expect that results of non-clinical studies, such as pharmacokinetics, toxicology and other studies, regarding certain components of our drug candidate Remoxy to be applicable to the other drug candidates that may arise out of our collaboration with King since all such drug candidates are expected to utilize such components. As a result, costs allocated to a specific drug candidate may not necessarily reflect the actual costs surrounding research and development of that drug candidate due to cross application of the foregoing. We are also developing a novel antibody drug candidate to treat metastatic melanoma. Research and development expenses related to this technology include approximately \$0.9 million and \$0.6 million in the three months ended September 30, 2009 and 2008, respectively, primarily in contractor fees and compensation. Research and development expenses related to hemophilia and other product candidates include approximately \$0.6 million and \$1.2 million in the three months ended September 30, 2009 and 2008, respectively, and \$3.1 million and \$3.4 million in the nine months ended September 30, 2009 and 2008, respectively, primarily in contractor fees and compensation.

Estimating the dates of completion of clinical development, and the costs to complete development, of our drug candidates would be highly speculative, subjective and potentially misleading. Pharmaceutical products take a significant amount of time to research, develop and

commercialize. The clinical trial portion of the development of a new drug alone usually spans several years. We expect to reassess our future research and development plans based on our review of data we receive from our current research and development activities. The cost and pace of our future research and development activities are linked and subject to change.

#### **Critical Accounting Policies**

The preparation of our financial statements in accordance with U.S. generally accepted accounting principles requires us to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues, expenses and interest income in our financial statements and accompanying notes. We evaluate our estimates on an ongoing basis, including those estimates related to agreements, research collaborations and investments. We base our estimates on historical experience and various other assumptions that we believe to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates under different assumptions or conditions. The following items in our financial statements require significant estimates and judgments:

Expenses for clinical trials. We incur expenses for clinical trials from the planning phase through patient enrollment to reporting of the underlying data. We estimate expenses incurred for clinical trials that are in process based on patient enrollment and based on clinical data collection and management. Costs that are associated with patient enrollment are recognized as each patient in the clinical trial completes enrollment. Estimated clinical trial costs related to enrollment can vary based on numerous factors, including expected number of patients in trials, the number of patients that do not complete participation in a trial, and when a patient drops out of a trial. Information about patient enrollment can become available significantly after we report our expenses for clinical trials, in which case we would change our estimate of the remaining cost of a trial. Costs that are based on clinical data collection and management are recognized based on estimates of unbilled goods and services received. In the event of early termination of a clinical trial, we would accrue an amount based on estimates of the remaining non-cancelable obligations associated with winding down the clinical trial.

Stock-based compensation. We recognize expense in the statement of operations for the fair value of all share-based payments to employees and directors, including grants of employee stock options and other share based awards. For stock options, we use the Black-Scholes option valuation model and the single-option award approach and straight-line attribution method. Using this approach, the compensation cost is amortized on a straight-line basis over the vesting period of each respective stock option, generally four years. We estimate forfeitures and adjust this estimate periodically based on the extent to which future actual forfeitures differ, or are expected to differ, from such estimates.

We have granted share-based awards that vest upon achievement of certain performance criteria, or Performance Awards. The value of these awards is the product of the number of shares of our common stock to be issued under the award multiplied by the fair market value of a share of our common stock on the date of grant. These awards include future performance conditions. We estimate an implicit service period for achieving these performance conditions. Performance Awards vest and common stock is issued on

18

achieving performance conditions. We recognize stock-based compensation expense for Performance Awards when we conclude that achieving a performance condition is probable. We periodically review and update as appropriate our estimates of the implicit service periods and the likelihood of achieving the performance conditions.

Revenue recognition and deferred program fee revenue. We recognize program fee revenue, collaboration revenue and milestone revenue in connection with our strategic alliance with King. Program fee revenue is derived from the \$150.0 million upfront payment from King received in December 2005 and is recognized ratably over our estimate of the development period of four drug candidates expected to be developed under the strategic alliance with King. We currently estimate the development period for all four expected drug candidates to extend through September 2014. We review the estimated development period on a quarterly basis and change it if appropriate based upon our latest expectations. Collaboration revenues from reimbursement of development expenses are generally recognized when King has completed its review of the expenses invoiced to them. King is obligated to pay us milestone payments contingent upon the achievement of certain substantive events in the development of Remoxy and the other opioid painkillers under the strategic alliance. We recognize milestone payments from King as revenue when we achieve the underlying developmental milestone as the milestone payments are not dependent upon any other future activities or achievement of any other future milestones and the achievement of each of the developmental milestones were substantively at risk and contingent at the effective date of the collaboration. Substantial effort is involved in achieving each of the developmental milestones. These milestones represent the culmination of discrete earnings processes and the amount of each milestone payment is reasonable in relation with the level of effort associated with the achievement of the milestone. Each milestone payment is non-refundable and non-creditable when made. The ongoing research and development services being provided to King under the collaboration are priced at fair value based upon the reimbursement of expenses incurred pursuant to the collaboration with King.

Taxes. We make estimates and judgments in determining the need for a provision for income taxes, including the estimation of our taxable income or loss for each full fiscal year. We have accumulated significant deferred tax assets. Deferred tax assets reflect the tax effects of net operating loss and tax credit carryovers as well as temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts included in our income tax returns. Realization of deferred tax assets is dependent upon future earnings, if any. We are uncertain of the timing and amount of any future earnings. Accordingly, except for \$1.1 million of net deferred tax assets recognized on our balance sheet included in other assets as of September 30, 2009, we offset the net deferred tax assets with a valuation allowance. We may in the future determine that more of our deferred tax assets will likely be realized, in which case we will reduce our valuation allowance in the quarter in which such determination is made. If the valuation allowance is reduced, we may recognize a benefit from income taxes in our statement of operations in that period.

19

#### **Results of Operations**

Three and nine months ended September 30, 2009 and 2008

Revenue Program fee revenue

In 2005, King paid us a \$150.0 million upfront fee in connection with the closing of our strategic alliance with them. Program fee revenues recognized from this upfront fee were \$3.6 million for each of the three months ended September 30, 2009 and 2008 and \$10.8 million for each of the nine months ended September 30, 2009 and 2008. We expect to recognize the remainder of the program fee ratably over our estimate of the development period under the strategic alliance with King. We currently estimate the development period for all four expected drug candidates to extend through September 2014.

Revenue Collaboration revenue

Collaboration revenues decreased to \$0.2 million from \$6.7 million in the three months ended September 30, 2009 and 2008, respectively, and to \$6.1 million from \$24.7 million in the nine months ended September 30, 2009 and 2008, respectively. These revenues are related to reimbursement of our development expenses incurred pursuant to the King strategic alliance. Collaboration revenues were lower in the three and nine month periods of 2009 as compared to the same periods of 2008 primarily because the reimbursable expenses we incurred pursuant to the strategic alliance with King were lower.

We expect the amount and timing of collaboration revenue to fluctuate in relation to the amount and timing of the underlying research and development expenses, as well as the timing of the completion of King s review of submitted expenses.

Research and Development Expense

Research and development expense consists primarily of costs of drug development work associated with our drug candidates, including:

preclinical testing,

clinical trials,

clinical supplies and related formulation and design costs, and

salaries and other personnel-related expenses.

Research and development expenses decreased to \$4.5 million in the three months ended September 30, 2009 from \$12.9 million in the same period in 2008 and to \$17.2 million in the nine months ended September 30, 2009 from \$36.6 million in the same period in 2008. The decrease was primarily due to decreases in clinical and other development activities for Remoxy as well as the recent assumption by King of primary regulatory responsibility for Remoxy, partially offset by increased activities in metastatic melanoma, hemophilia and other projects. Research and development expenses included non-cash stock-based compensation expense of \$1.0 million and \$2.9 million in the three months ended September 30, 2009 and 2008, respectively and \$3.0 million and \$4.9 million in the nine months ended September 30, 2009 and 2008, respectively.

Table of Contents 27

20

#### **Table of Contents**

We expect research and development expenses to fluctuate over the next several years as we continue our development efforts. In particular, with King assuming most development activities for Remoxy, we expect our related reimbursable expenses for Remoxy will be lower in the future. We expect our development efforts to result in our drug candidates progressing through various stages of clinical trials, including current and potential clinical trials for our other drug candidates designed to reduce potential risks of unintended use, as well as further clinical development of our product candidates in metastatic melanoma and hemophilia. King is obligated to reimburse development expenses for our drug candidates designed to reduce potential risks of unintended use pursuant to our strategic alliance. Our research and development expenses may fluctuate from period to period due to the timing and scope of our development activities and the results of clinical trials and preclinical studies.

#### General and Administrative Expense

General and administrative expenses consist primarily of compensation and other general corporate expenses. General and administrative expenses decreased to \$1.5 million in the three months ended September 30, 2009 from \$3.6 million in the same period in 2008 and to \$4.7 million in the nine months ended September 30, 2009 from \$7.3 million in the same period in 2008. The decrease was primarily due to decreases in compensation and operating expenses. General and administrative expenses included non-cash stock-based compensation expense of \$0.7 million and \$2.3 million for the three months ended September 30, 2009 and 2008, respectively, and \$1.9 million and \$3.5 million for the nine months ended September 30, 2009 and 2008, respectively. We expect general and administrative expenses to increase over the next several years in connection with support of pre-commercialization and commercialization activities for our drug candidates. The increase may fluctuate from period to period due to the timing and scope of these activities and the results of clinical trials and preclinical studies.

#### Interest Income

Interest income decreased to \$0.6 million for the three months ended September 30, 2009 from \$1.4 million in the same period in 2008 and decreased to \$1.2 million for the nine months ended September 30, 2009 from \$5.2 million in the same period in 2008. The decreases in interest income are primarily due to decreases in prevailing interest rates on investments in marketable securities and, to a lesser extent, decreased average balances of marketable securities. We expect our interest income to decrease in the future as we use cash to fund our operations.

#### Benefit from income taxes

We have projected a tax loss for the full year 2009. We expect to elect to carryback our projected tax loss for 2009 against our taxable income for 2008. We expect this election will result in a tax refund in 2010 related to this carryback. As a result, we have recorded a benefit from income taxes of \$0.7 million for the nine months ended September 30, 2009.

21

#### **Liquidity and Capital Resources**

Since inception, we have financed our operations primarily through public and private stock offerings, payments received under our strategic alliance with King and interest earned on our investments. We intend to continue to use our capital resources to fund research and development activities, capital expenditures, working capital requirements and other general corporate purposes. As of September 30, 2009, cash, cash equivalents and marketable securities were \$177.5 million.

Net cash used in operating activities was \$12.7 million for the nine months ended September 30, 2009 compared to net cash provided by operating activities of \$15.6 million for the nine months ended September 30, 2008. The change was primarily due to milestone payments received in 2008 as well as activity related to reimbursable expenses for our products candidates pursuant to our strategic alliance with King and increased activities in our other product candidates.

Net cash used in investing activities was \$111.8 million in the nine months ended September 30, 2009 and net cash provided by investing activities was \$67.6 million for the nine months ended September 30, 2008. Cash used in investing activities for the nine months ended September 30, 2009 consisted primarily of purchases of marketable securities. Cash provided by investing activities for the nine months ended September 30, 2008 consisted of sales and maturities of marketable securities. We did not use any cash for purchases of property, equipment and leasehold improvements during the nine months ended September 30, 2009 or 2008. We expect to continue to invest in our infrastructure to support our operations.

Net cash provided by financing activities was \$0.4 million in the nine months ended September 30, 2009 and net cash used by financing activities was \$25.8 million in the nine months ended September 30, 2008. In the nine months ended September 30, 2008, we repurchased stock under a stock buyback plan that was completed in 2008. Other cash from financing activities in both 2009 and 2008 consisted of proceeds received from the issuance of our common stock pursuant to stock option exercises.

We had \$43.5 million of total deferred tax assets at December 31, 2008. Realization of these deferred tax assets is dependent on future earnings, if any. We are uncertain of the timing and amount of any future earnings. Accordingly, except for \$1.1 million of deferred tax assets included in other assets as of September 30, 2009, we offset the deferred tax asset with a valuation allowance. There is a high degree of uncertainty regarding the timing of future cash outflows associated with our tax liabilities. Our net tax liabilities at September 30, 2009 do not result in a material contractual obligation. We expect to receive a tax refund of \$2.1 million in the three months ended December 31, 2009 from taxes paid for the year ended December 31, 2006.

We currently lease approximately 41,200 square feet of general office space pursuant to non-cancelable operating leases that will expire in 2010 and 2012. Future minimum lease payments are as follows as of December 31, 2008 (in thousands):

	2009	2010	2011	2012	Total
Future minimum lease payments	\$ 743	\$ 713	\$ 570	\$ 339	\$ 2,365

22

#### **Table of Contents**

We have license agreements that require us to make milestone payments upon the successful achievement of milestones, including clinical milestones. Our license agreements also require us to pay certain royalties to our licensors if we succeed in fully commercializing products under these license agreements. All of these potential future payments are cancelable as of September 30, 2009. Our formulation agreement with Durect Corporation obligates us to make certain milestone payments upon achieving clinical milestones and regulatory milestones. King is obligated to reimburse us for any of our milestone payments and royalty payments to Durect Corporation.

We have an accumulated deficit of \$117.3 million at September 30, 2009. We expect our cash requirements to be significant in the future. The amount and timing of our future cash requirements will depend on regulatory and market acceptance of our drug candidates and the resources we devote to researching and developing, formulating, manufacturing, commercializing and supporting our products. We believe that our current resources should be sufficient to fund our operations for at least the next 12 months. We may seek additional future funding through public or private financing within this timeframe, if such funding is available and on terms acceptable to us.

#### **Off-balance Sheet Arrangements**

As of September 30, 2009, we did not have any relationships with unconsolidated entities or financial partnerships, such as entities often referred to as structured finance or special purpose entities, which would have been established for the purpose of facilitating off-balance sheet arrangements or other contractually narrow or limited purposes. In addition, we do not engage in trading activities involving non-exchange traded contracts. Therefore, we are not materially exposed to financing, liquidity, market or credit risk that could arise if we had engaged in these relationships. We do not have relationships or transactions with persons or entities that derive benefits from their non-independent relationship with us or our related parties.

#### Item 3. Quantitative and Qualitative Disclosures About Market Risk

The primary objective of our cash investment activities is to preserve principal while at the same time maximizing the income we receive from our investments without significantly increasing risk. Some of the securities that we invest in may be subject to market risk. This means that a change in prevailing interest rates may cause the principal amount of the investment to fluctuate. For example, if we hold a security that was issued with a fixed interest rate at the then-prevailing rate and the interest rate later rises, the principal amount of our investment will probably decline. A hypothetical 50 basis point increase in interest rates reduces the fair value of our available-for-sale securities at September 30, 2009 by approximately \$0.6 million. To minimize this risk, we intend to maintain our portfolio of cash equivalents and marketable securities in a variety of securities, including commercial paper, government and non-government debt securities and/or money market funds that invest in such securities. We have no holdings of derivative financial or commodity instruments.

23

#### **Table of Contents**

As of September 30, 2009, our investments consisted of investments in corporate and government notes and obligations, certificates of deposits or in money market accounts and checking funds with variable market rates of interest. We believe our credit risk is immaterial. We measure our cash equivalents and marketable securities at fair value on a recurring basis and have significant observable inputs where there are identical or comparable assets in the market to use in establishing our fair value measurements. We use significant observable inputs that include but are not limited to benchmark yields, reported trades, broker/dealer quotes, and issuer spreads. Generally, the types of instruments we invest in are not traded on a market such as the NASDAQ Global Market. We consider these inputs to be Level 2 inputs. Generally, the types of instruments we invest in are not traded on a market such as the NASDAQ Global Market, which we would consider to be Level 1 inputs. We do not have any investments that would require inputs considered to be Level 3. We use the bid price to establish fair value.

#### Item 4. Controls and Procedures

Evaluation of disclosure controls and procedures. Our management evaluated, with the participation of our Chief Executive Officer and our Chief Financial Officer, the effectiveness of our disclosure controls and procedures as of the end of the period covered by this Quarterly Report on Form 10-Q. Based on this evaluation, our Chief Executive Officer and our Chief Financial Officer have concluded that our disclosure controls and procedures are effective to ensure that information we are required to disclose in reports that we file or submit under the Securities Exchange Act of 1934 is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission, or SEC, rules and forms and that such information is accumulated and communicated to management as appropriate to allow timely decisions regarding required disclosures.

Changes in internal control over financial reporting. There was no change in our internal control over financial reporting that occurred during the period covered by this Quarterly Report on Form 10-Q that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

24

#### PART II OTHER INFORMATION

Item 1. Legal Proceedings

None.

#### Item 1A. Risk Factors

Our future operating results may vary substantially from anticipated results due to a number of factors, many of which are beyond our control. The following discussion highlights some of these factors and the possible impact of these factors on future results of operations. You should carefully consider these factors before making an investment decision. If any of the following factors actually occur, our business, financial condition or results of operations could be harmed. In that case, the price of our common stock could decline, and you could experience losses on your investment in our common stock.

#### Clinical and Regulatory Risks

If we or our collaborators fail to obtain the necessary regulatory approvals, or if such approvals are limited, we and our collaborators will not be allowed to commercialize our drug candidates, and we will not generate product revenues.

Satisfaction of all regulatory requirements typically takes many years, is dependent upon the type, complexity and novelty of the drug candidate, and requires the expenditure of substantial resources for research and development. In December 2008, we received from the FDA a Complete Response Letter for the NDA for Remoxy. In this Complete Response Letter, the FDA indicated additional non-clinical data is required to support the approval of Remoxy. The FDA has not requested or recommended additional clinical efficacy studies prior to approval. In March 2009, King assumed sole responsibility for the regulatory approval of Remoxy. In July 2009, King met with the FDA to discuss Remoxy. As a result of this meeting, King anticipates a resubmission of the Remoxy NDA could occur in 2010. While King has announced that it believes that the outcome of this meeting provided it with a path for resubmission of the Remoxy NDA, and that the FDA is not requiring additional clinical trials to support approval, there can be no assurance that the FDA will approve the NDA for Remoxy, even with the additional data proposed to be provided by King, or that the FDA will not require additional clinical or non-clinical data to be submitted. If the FDA were to require additional clinical or non-clinical data, providing such data may significantly delay the potential approval of Remoxy.

Our research and clinical approaches may not lead to drugs that the FDA considers safe for humans and effective for indicated uses we are studying. The FDA may require additional non-clinical studies, in which case we or our collaborators would have to expend additional time and resources and would likely delay the date of potentially receiving regulatory approval. The approval process may also be delayed by changes in government regulation, future legislation or administrative action or changes in FDA policy that occur prior to or during our regulatory review. Delays in obtaining regulatory approvals would:

delay commercialization of, and product revenues from, our drug candidates; and

diminish the competitive advantages that we may have otherwise enjoyed, which would have an adverse effect on our operating results and financial condition.

25

Even if we or our collaborators comply with all FDA regulatory requirements, our drug candidates may never obtain regulatory approval. If we or our collaborators fail to obtain regulatory approval for any of our drug candidates we will have fewer commercial products, if any, and corresponding lower product revenues, if any. Even if our drug candidates receive regulatory approval, such approval may involve limitations on the indications and conditions of use or marketing claims may be made for our products. Further, later discovery of previously unknown problems or adverse events could result in additional regulatory restrictions, including withdrawal of products. The FDA may also require us or our collaborators to commit to perform lengthy Phase IV post-approval clinical trials. Our expending additional resources on such trials would have an adverse effect on our operating results and financial condition.

In jurisdictions outside the United States, we or our collaborators must receive marketing authorizations from the appropriate regulatory authorities before commercializing our drugs. Regulatory approval processes outside the United States generally include all of the aforementioned requirements and risks associated with FDA approval.

If we or our collaborators are unable to design, conduct and complete clinical trials successfully, our drug candidates will not be able to receive regulatory approval.

In order to obtain FDA approval for any of our drug candidates, we or our collaborators must submit to the FDA an NDA that demonstrates with substantive evidence that the drug candidate is both safe and effective in humans for its intended use. This demonstration requires significant research and animal tests, which are referred to as preclinical studies, as well as human tests, which are referred to as clinical trials.

Results from Phase I clinical programs may not support moving a drug candidate to Phase III or Phase III clinical trials. Phase III clinical trials may not demonstrate the safety or efficacy of our drug candidates. Success in preclinical studies and early clinical trials does not ensure that later clinical trials will be successful. Results of later clinical trials may not replicate the results of prior clinical trials and preclinical studies. Even if the results of Phase III clinical trials are positive, we or our collaborators may have to commit substantial time and additional resources to conducting further preclinical studies and clinical trials before obtaining FDA approval for any of our drug candidates.

Clinical trials are very expensive and difficult to design and implement, in part because they are subject to rigorous requirements. The clinical trial process also consumes a significant amount of time. Furthermore, if participating patients in clinical trials suffer drug-related adverse reactions during the course of such clinical trials, or if we, our collaborators or the FDA believe that participating patients are being exposed to unacceptable health risks, such clinical trials will have to be suspended or terminated. Failure can occur at any stage of the clinical trials, and we or our collaborators could encounter problems that cause abandonment or repetition of clinical trials.

Our clinical trials with Remoxy and our potential future clinical trials for other drug candidates for treatment of pain measure clinical symptoms, such as pain and physical dependence that are not biologically measurable. The success in clinical trials of Remoxy and our

26

#### **Table of Contents**

other drug candidates designed to reduce potential risks of unintended use depends on reaching statistically significant changes in patients symptoms based on clinician-rated scales. Due in part to a lack of consensus on standardized processes for assessing clinical outcomes, these scores may or may not be reliable, useful or acceptable to regulatory agencies.

We have no history of developing drug candidates for oncology or hemophilia. We do not know whether any of our planned clinical trials in metastatic melanoma or hemophilia will result in marketable drugs.

In addition, completion of clinical trials can be delayed by numerous factors, including:

delays in identifying and agreeing on acceptable terms with prospective clinical trial sites;

slower than expected rates of patient recruitment and enrollment;

unanticipated patient drop out rates;

increases in time required to complete monitoring of patients during or after participation in a clinical trial; and

unexpected need for additional patient-related data.

Any of these delays could significantly impact the timing, approval and commercialization of our drug candidates and could significantly increase our overall costs of drug development.

Even if clinical trials are completed as planned, their results may not support expectations or intended marketing claims. The clinical trials process may fail to demonstrate that our drug candidates are safe and effective for indicated uses. Such failure would cause us to abandon a drug candidate and could delay development of other drug candidates.

Clinical trial designs that were discussed with authorities prior to their commencement may subsequently be considered insufficient for approval at the time of application for regulatory approval.

We discuss with and obtain guidance from regulatory authorities on certain of our clinical development activities. With the exception of our Special Protocol Assessment, or SPA, such as the one we completed with the FDA with respect to the Phase III clinical trial for Remoxy, these discussions are not binding obligations on the part of regulatory authorities.

Regulatory authorities may revise previous guidance or decide to ignore previous guidance at any time during the course of our clinical activities or after the completion of our clinical trials. Even with successful clinical safety and efficacy data, including such data from a clinical trial conducted pursuant to an SPA, we may be required to conduct additional, expensive clinical trials to obtain regulatory approval.

Developments by competitors may establish standards of care that affect our ability to conduct our clinical trials as planned.

We have conducted clinical trials of our drug candidates comparing our drug candidates to both placebo and other approved drugs. Changes in standards related to clinical trial design could affect our ability to design and conduct clinical trials as planned. For example, regulatory authorities may not allow us to compare our drug candidates to placebo in a particular clinical indication where approved products are available. In that case, both the cost and the amount of time required to conduct a clinical trial could increase.

Table of Contents 34

27

The DEA limits the availability of the active ingredients in certain of our current drug candidates and, as a result, our quotas may not be sufficient to complete clinical trials, or to meet commercial demand or may result in clinical delays.

The U.S. Drug Enforcement Administration, or DEA, regulates chemical compounds as Schedule I, II, III, IV or V substances, with Schedule I substances considered to present the highest risk of substance abuse and Schedule V substances the lowest risk. Certain active ingredients in our current drug candidates, such as oxycodone, are listed by the DEA as Schedule II under the Controlled Substances Act of 1970. Consequently, their manufacture, research, shipment, storage, sale and use are subject to a high degree of oversight and regulation. For example, all Schedule II drug prescriptions must be signed by a physician, physically presented to a pharmacist and may not be refilled without a new prescription. Furthermore, the amount of Schedule II substances we can obtain for clinical trials and commercial distribution is limited by the DEA and our quota may not be sufficient to complete clinical trials or meet commercial demand. There is a risk that DEA regulations may interfere with the supply of the drugs used in our clinical trials, and, in the future, our ability to produce and distribute our products in the volume needed to meet commercial demand.

Conducting clinical trials of our drug candidates or potential commercial sales of a drug candidate may expose us to expensive product liability claims and we may not be able to maintain product liability insurance on reasonable terms or at all.

The risk of product liability is inherent in the testing of pharmaceutical products. If we cannot successfully defend ourselves against product liability claims, we may incur substantial liabilities or be required to limit or terminate testing of one or more of our drug candidates. Our inability to obtain sufficient product liability insurance at an acceptable cost to protect against potential product liability claims could prevent or inhibit the commercialization of our drug candidates. We currently carry clinical trial insurance but do not carry product liability insurance. If we successfully commercialize one or more of our drug candidates, we may face product liability claims, regardless of FDA approval for commercial manufacturing and sale. We may not be able to obtain such insurance at a reasonable cost, if at all. Even if our agreements with any current or future corporate collaborators entitle us to indemnification against product liability losses, such indemnification may not be available or adequate should any claim arise.

If our drug candidates receive regulatory approval, we and our collaborators will also be subject to ongoing FDA obligations and continued regulatory review, such as continued safety reporting requirements, and we and our collaborators may also be subject to additional FDA post-marketing obligations or new regulations, all of which may result in significant expense and limit our and our collaborators ability to commercialize our potential drugs.

Any regulatory approvals that our drug candidates receive may also be subject to limitations on the indicated uses for which the drug may be marketed or contain requirements for potentially costly post-marketing follow-up studies. In addition, if the FDA approves any of our drug candidates, the labeling, packaging, adverse event reporting, storage, advertising, promotion and

28

record keeping for the drug will be subject to extensive regulatory requirements. The subsequent discovery of previously unknown problems with the drug, including but not limited to adverse events of unanticipated severity or frequency, or the discovery that adverse events previously observed in preclinical research or clinical trials that were believed to be minor actually constitute much more serious problems, may result in restrictions on the marketing of the drug, and could include withdrawal of the drug from the market.

The FDA s policies may change and additional government regulations may be enacted that could prevent or delay regulatory approval of our drug candidates. For example, in March 2009, the FDA met with the sponsors of opioid drug products in a private meeting in order to discuss Risk Evaluation and Mitigation Strategies for opioid drugs. These discussions may result in changes to or additional government regulations with respect to our opioid drug candidates. We cannot predict the likelihood, nature or extent of adverse government regulation that may arise from future legislation or administrative action, either in the United States or abroad. If we are not able to maintain regulatory compliance, we may be subject to fines, suspension or withdrawal of regulatory approvals, product recalls, seizure of products, operating restrictions and criminal prosecution. Any of these events could prevent us from marketing our drugs and our business could suffer.

#### Risks Relating to Commercialization

If physicians and patients do not accept and use our drugs, we will not achieve sufficient product revenues and our business will suffer.

Even if the FDA approves our drugs, physicians and patients may not accept and use them. Acceptance and use of our drugs will depend on a number of factors including:

perceptions by members of the healthcare community, including physicians, about the safety and effectiveness of our drugs, and, in particular, the effectiveness of Remoxy in reducing potential risks of unintended use;

perceptions by physicians regarding the cost benefit of Remoxy in reducing potential risks of unintended use;

published studies demonstrating the cost-effectiveness of our drugs relative to competing products;

availability of reimbursement for our products from government or healthcare payers;

our or our collaborators ability to implement a risk management plan prior to the distribution of any Schedule II drug; and

effectiveness of marketing and distribution efforts by King, us and other licensees and distributors.

Because we expect to rely on sales generated by our current lead drug candidates for substantially all of our revenues for the foreseeable future, the failure of any of these drugs to find market acceptance would harm our business and could require us to seek additional financing.

If King is not successful in developing and commercializing Remoxy and in commercializing other opioid drugs under our strategic alliance with King, our revenues and our business will suffer.

Our ability to earn royalties from sales of Remoxy depends on King s abilities to obtain regulatory approval for and commercialize Remoxy. Additionally, our ability to earn royalties from sales of Remoxy and other drugs subject to our strategic alliance with King will depend on King s abilities to maintain regulatory approval and achieve market acceptance of such drugs once commercialized. King may elect to independently develop drugs that could compete with ours or fail to commit sufficient resources to the development, marketing and distribution of Remoxy and other drugs developed under our strategic alliance. King may not proceed with the commercialization of Remoxy and other drugs developed under our strategic alliance with the same degree of urgency as we would because of other priorities they face. If King is not successful in developing or commercializing Remoxy for a variety of reasons, including but not limited to competition from other pharmaceutical companies, or if King fails to perform as we expect, our potential for revenue from drugs developed in connection with our strategic alliance with King, if any, could be dramatically reduced and our business would suffer.

If we are unable to develop our own sales, marketing and distribution capabilities, or if we are not successful in contracting with third parties for these services on favorable terms, or at all, our product revenues could be disappointing.

We currently have no sales, marketing or distribution capabilities. Except with regard to products developed under our strategic alliance with King, in order to commercialize our products, if any are approved by the FDA, we will either have to develop such capabilities internally or collaborate with third parties who can perform these services for us. If we decide to commercialize any of our drugs ourselves, we may not be able to hire the necessary experienced personnel and build sales, marketing and distribution operations which are capable of successfully launching new drugs and generating sufficient product revenues. In addition, establishing such operations will take time and involve significant expense.

If we decide to enter into new co-promotion or other licensing arrangements with third parties, we may be unable to locate acceptable collaborators because the number of potential collaborators is limited and because of competition from others for similar alliances with potential collaborators. Even if we are able to identify one or more acceptable new collaborators, we may not be able to enter into any collaborative arrangements on favorable terms, or at all.

In addition, due to the nature of the market for our drug candidates, it may be necessary for us to license all or substantially all of our drug candidates not covered by our strategic alliance with King to a single collaborator, thereby eliminating our opportunity to commercialize these other products independently. If we enter into any such new collaborative arrangements, our revenues are likely to be lower than if we marketed and sold our products ourselves.

In addition, any revenues we receive would depend upon our collaborators efforts which may not be adequate due to lack of attention or resource commitments, management turnover, change of strategic focus, business combinations or other factors outside of our control. Depending upon the terms of our collaboration, the remedies we have against an under-performing collaborator may be limited. If we were to terminate the relationship, it may be difficult or impossible to find a replacement collaborator on acceptable terms, or at all.

30

If we cannot compete successfully for market share against other drug companies, we may not achieve sufficient product revenues and our business will suffer.

The market for our drug candidates is characterized by intense competition and rapid technological advances. If our drug candidates receive FDA approval, they will compete with a number of existing and future drugs and therapies developed, manufactured and marketed by others. Existing or future competing products may provide greater therapeutic convenience or clinical or other benefits for a specific indication than our products, or may offer comparable performance at a lower cost. If our products are unable to capture and maintain market share, we may not achieve sufficient product revenues and our business will suffer.

We and our collaborators will compete for market share against fully integrated pharmaceutical companies or other companies that are collaborating with larger pharmaceutical companies, academic institutions, government agencies and other public and private research organizations. Many of these competitors have drugs already approved or drug candidates in development that will or may compete against our approved drug candidates. In addition, many of these competitors, either alone or together with their collaborative partners, operate larger research and development programs and have substantially greater financial resources than we do, as well as significantly greater experience in:

developing drugs;	
conducting preclinical testing and human clinical trials;	
obtaining FDA and other regulatory approvals of drugs;	
formulating and manufacturing drugs; and	
launching, marketing, distributing and selling drugs.  Our ability to generate product revenues will be diminished if we fail to obt for our products from healthcare payers.	ain acceptable prices or an adequate level of reimbursement
Our ability to commercialize our drugs, alone or with collaborators, will depend	in part on the extent to which reimbursement will be available

government and health administration authorities;

private health maintenance organizations and health insurers; and

other healthcare payers.

from:

Significant uncertainty exists as to the reimbursement status of newly approved healthcare products. Healthcare payers, including Medicare, health maintenance organizations and managed care organizations, are challenging the prices charged for medical products and services and/or are seeking pharmacoeconomic data to justify formulary acceptance and reimbursement practices. We currently have not generated pharmacoeconomic data on any of our drug candidates. Government and other healthcare payers increasingly are attempting to contain healthcare costs by limiting both coverage and the level of reimbursement for drugs, and by refusing, in some cases, to provide coverage for uses of approved products for disease indications for which the FDA has or has not granted labeling approval. Adequate third-party insurance coverage may not be available to patients for any products we discover and develop, alone or with collaborators. If government and other healthcare payers do not provide adequate coverage and reimbursement levels for our products, market acceptance of our drug candidates could be limited.

Government agencies may establish and promulgate usage guidelines that could limit the use of our drug candidates.

Government agencies, professional and medical societies, and other groups may establish usage guidelines that apply to our drug candidates. These guidelines could address such matters as usage and dose, among other factors. Application of such guidelines could limit the clinical use or commercial appeal of our drug candidates.

#### Risks Relating to our Collaboration Agreements

If King or other outside collaborators fail to devote sufficient time and resources to our drug development programs, or if their performance is substandard, our regulatory submissions and our product introductions may be delayed.

Pursuant to our strategic alliance with King, we jointly manage and prepare Phase III clinical trials and NDA submissions in the United States for Remoxy and other drug candidates with King. We rely on King to devote time and resources to the development, manufacturing and commercialization of Remoxy and other drug candidates under our strategic alliance. King may develop or acquire drugs or drug candidates that compete for resources with our drug candidates that are subject to this strategic alliance. For instance, King has acquired a drug candidate for the acute pain market and has acquired another company that has technologies to reduce potential risks of unintended use and a NDA in place with the FDA for an opioid to reduce potential risks of unintended use. There can be no assurance that King s other drug candidates will not become competitive with our drug candidates being developed under the collaboration with King. If King limits its time and resources devoted to the strategic alliance or fails to fund the continued development of Remoxy or other opioid drug candidates as required by our agreement with King, or otherwise fails to perform as we expect, we may not achieve clinical and regulatory milestones and regulatory submissions and related product introductions may be delayed or prevented, and revenues that we would receive from these activities will be less than expected. In addition, if King fails to perform as required under our collaboration agreement, their failure may jeopardize our rights under our license with Durect.

We depend on independent investigators and collaborators, such as universities and medical institutions, to conduct our clinical trials under agreements with us. These investigators and collaborators are not our employees and we cannot control the amount or timing of resources that they devote to our programs. They may not assign as great a priority to our programs or pursue them as diligently as we would if we were undertaking such activities ourselves. If these investigators or collaborators fail to devote sufficient time and resources to our drug development programs, or if their performance is substandard, the approval of our regulatory submissions and our introductions of new drugs will be delayed or prevented.

Our collaborators may also have relationships with other commercial entities, some of which may compete with us. If outside collaborators assist our competitors to our detriment, the approval of our regulatory submissions will be delayed and the sales from our products, if any are commercialized, will be less than expected.

32

If we fail to maintain our collaboration agreements and licenses for Remoxy and other drugs designed to reduce potential risks of unintended use, we may have to reduce or delay our drug candidate development.

Our plan for developing, manufacturing and commercializing Remoxy and other drugs designed to reduce potential risks of unintended use currently requires us to successfully maintain our strategic alliance with King to advance our programs and provide funding to support our expenditures on Remoxy and other drug candidates and to maintain our license from Durect. If we are not able to maintain our existing strategic alliance with King or if King doesn t provide the required funding under the strategic alliance, we may have to limit the size or scope of, or delay or abandon the development of other drug candidates or undertake and fund development of these drug candidates ourselves and if we are unable to maintain our license with Durect for one or more potential products we may lose the rights to utilize Durect s technology for such potential products. If we elect to fund drug development efforts with respect to Remoxy and other drug candidates on our own, we may need to obtain additional capital, which may not be available on acceptable terms, or at all.

We may not succeed at in-licensing drug candidates or technologies to expand our product pipeline.

We may not successfully in-license drug candidates or technologies to expand our product pipeline. The number of such candidates or technologies is limited. Competition among large pharmaceutical companies and biopharmaceutical companies for promising drug candidates or technologies is intense because such companies generally desire to expand their product pipelines through in-licensing. If we fail to carry out such in-licensing and expand our product pipeline, our potential future revenues may suffer.

Our collaborative agreements may not succeed or may give rise to disputes over intellectual property, disputes concerning the scope of collaboration activities or other issues.

Our strategy to focus on drug development requires us to enter into collaborative agreements with third parties, such as our strategic alliance with King and our license agreement with Durect. Such agreements are generally complex and contain provisions that could give rise to legal disputes, including potential disputes concerning ownership of intellectual property under collaborations or disputes concerning the scope of collaboration activities. Such disputes can delay or prevent the development of potential new drug products, or can lead to lengthy, expensive litigation or arbitration. Other factors relating to collaborative agreements may adversely affect the success of our drug candidates, including:

the development of parallel products by our collaborators or by a competitor;

arrangements with collaborative partners that limit or preclude us from developing certain products or technologies;

premature termination of a collaborative or license agreement; or

failure by a collaborative partner to provide required funding or to devote sufficient resources to the development of or legal defense of our potential products.

33

### Risks Relating to our Intellectual Property

Our ability to commercialize our drug candidates will depend on our ability to sell such products without infringing the patent or proprietary rights of third parties. If we are sued for infringing the intellectual property rights of third parties, such litigation will be costly and time consuming and an unfavorable outcome would have a significant adverse effect on our business.

Our ability to commercialize our drug candidates will depend on our ability to sell such products without infringing the patents or other proprietary rights of third parties. Intellectual property rights in the areas of controlled-release oxycodone, antibodies, gene integration and more generally, in oncology, neurology, radiopharmaceutical technologies and gene therapy are complicated and are continuously evolving. Holders of patent rights in these areas may allege that the commercialization of Remoxy or our other drug candidates infringes such patent rights. While we believe that we would have valid defenses to any claim of infringement, there can be no assurance that these or other third party patents will not limit our ability to commercialize Remoxy or our other drug candidates.

In addition, because patent applications are published 18 months after their filing, and because applications can take several years to issue, there may be currently pending third-party patent applications that are unknown to us, which may later result in issued patents. If a third-party claims that we infringe on its patents or other proprietary rights, we could face a number of issues that could seriously harm our competitive position, including:

infringement claims that, with or without merit, can be costly and time consuming to litigate, can delay the regulatory approval process and can divert management s attention from our core business strategy;

substantial damages for past infringement which we may have to pay if a court determines that our products or technologies infringe upon a competitor s patent or other proprietary rights;

a court order prohibiting us from commercializing our products or technologies unless the holder licenses the patent or other proprietary rights to us, which such holder is not required to do;

if a license is available from a holder, we may have to pay substantial royalties or grant cross licenses to our patents or other proprietary rights; and

redesigning our process so that it does not infringe the third-party intellectual property rights, which may not be possible, or which may require substantial time and expense including delays in bringing our own products to market. Such actions could harm our competitive position and our ability to generate revenue and could result in increased costs.

If we are unable to protect our intellectual property our competitors could develop and market products with similar features that may reduce demand for our drug candidates.

Our success, competitive position and potential future revenues will depend in part on our ability to protect our intellectual property. If we or our collaborators fail to file, prosecute, obtain or maintain certain patents, our competitors could market products that contain features and clinical benefits similar to those of our products, and demand for our products could decline as a result.

#### **Table of Contents**

We and our collaborators have filed patent applications with the U.S. Patent and Trademark Office to further protect our technologies. If these patent applications do not result in issued patents, the duration or scope of our patent rights may be limited and our future revenues could be lower as a result.

We may be involved in challenges to our intellectual property. An adverse outcome of a challenge to our intellectual property could result in loss of claims of patents or other intellectual property rights that pertain to certain drugs we currently have under development and could have a material adverse impact on our future revenues.

We intend to file additional patent applications relating to our technology, products and processes. We may direct our collaborators to file additional patent applications relating to the licensed technology or we may do so ourselves. However, our competitors may challenge, invalidate or circumvent any of our current or future patents. These patents may also fail to provide us with meaningful competitive advantages.

We may become involved in expensive litigation or other legal proceedings related to our existing intellectual property rights, including patents.

We expect that we will rely upon patents, trade secrets, know-how, continuing technological innovations and licensing opportunities to develop and maintain our competitive position. Others may independently develop substantially equivalent proprietary information or be issued patents that may prevent the sale of our products or know-how or require us to license such information and pay significant fees or royalties in order to produce our products.

Our technology could infringe upon claims of patents owned by others. If we were found to be infringing on a patent held by another, we might have to seek a license to use the patented technology. In that case, we might not be able to obtain such a license on terms acceptable to us, or at all. If a legal action were to be brought against us or our licensors, we could incur substantial defense costs, and any such action might not be resolved in our favor. If such a dispute were to be resolved against us, we could have to pay the other party large sums of money and our use of our technology and the testing, manufacture, marketing or sale of one or more of our proposed products could be restricted or prohibited.

### Risks Relating to our Business and Strategy

Competition for qualified personnel in the pharmaceutical industry is intense, and if we are not successful in attracting and retaining qualified personnel, we could experience delays in completing necessary clinical trials, in the regulatory approval process or in formulating, manufacturing, marketing and selling our potential products.

We will need to hire additional qualified personnel with expertise in clinical research, preclinical testing, government regulation, formulation and manufacturing and sales and marketing. We compete for qualified individuals with numerous biopharmaceutical companies, universities and other research institutions. Competition for such individuals, particularly in the San Francisco Bay area, is intense, and our search for such personnel may not be successful. Attracting and retaining qualified personnel is critical to our success.

35

If third-party manufacturers of our drug candidates fail to devote sufficient time and resources to our concerns, or if their performance is substandard, our clinical trials and product introductions may be delayed and our costs may be higher than expected.

We have no manufacturing facilities and have limited experience in drug product development and commercial manufacturing. We lack the resources and expertise to formulate, manufacture or test the technical performance of our drug candidates. We currently rely on a limited number of experienced personnel and a small number of contract manufacturers and other vendors to formulate, test, supply, store and distribute drug supplies for our clinical trials. Our reliance on a limited number of vendors exposes us to the following risks, any of which could delay our clinical trials, and, consequently, FDA approval of our drug candidates and commercialization of our products, result in higher costs, or deprive us of potential product revenues:

Contract commercial manufacturers, their sub-contractors or other third parties we rely on, may encounter difficulties in achieving the volume of production needed to satisfy clinical needs or commercial demand, may experience technical issues that impact quality or compliance with applicable and strictly enforced regulations governing the manufacture of pharmaceutical products, and may experience shortages of qualified personnel to adequately staff production operations.

Our contract manufacturers could default on their agreements with us to provide clinical supplies or meet our requirements for commercialization of our products.

For certain of our drug candidates, the use of alternate manufacturers may be difficult because the number of potential manufacturers that have the necessary governmental licenses to produce narcotic products is limited. Additionally, the FDA and the DEA must approve any alternative manufacturer of our products before we may use the alternative manufacturer to produce our supplies.

It may be difficult or impossible for us to find a replacement manufacturer on acceptable terms quickly, or at all. Our contract manufacturers and vendors may not perform as agreed or may not remain in the contract manufacturing business for the time required to successfully produce, store and distribute our products.

If any contract manufacturer makes improvements in the manufacturing process for our products, we may not own, or may have to share, the intellectual property rights to such innovation.

We expanded our research and development activities to include development of potential drug candidates for indications other than pain, and we may not be able to successfully develop or commercialize these potential new drug candidates.

We have expanded our research and development activities to include development of potential drug candidates for indications other than pain, such as metastatic melanoma and hemophilia. We are conducting a Phase I clinical trial of our drug candidate in metastatic melanoma. We have no history of developing metastatic melanoma or hemophilia drug candidates or manufacturing radiopharmaceuticals. We do not know whether any of our planned clinical trials in metastatic melanoma or hemophilia will result in marketable products. We do not anticipate that any drug candidates in these areas will reach the market for at least several years, if at all.

Our employees and consultants are generally subject to confidentiality or other agreements with their former employers and they may inadvertently or otherwise violate those agreements.

Many of our employees and consultants were previously employed at universities or biotechnology or pharmaceutical companies. While we require our employees and consultants to honor any agreements they may have entered into prior to working with us, we may be subject to claims that we inadvertently or otherwise used or disclosed trade secrets or other confidential information belonging to former employers. Failure to defend such claims could result in loss of valuable rights or personnel, which in turn could harm or prevent commercialization of our drug candidates. Successful defense against such claims can be expensive and might distract us from executing our strategies.

Law enforcement concerns over diversion of opioids and social issues around abuse of opioids may make the regulatory approval process and commercialization of our drug candidates very difficult.

Media stories regarding the diversion of opioids and other controlled substances are commonplace. Law enforcement agencies or regulatory agencies may apply policies that seek to limit the availability of opioids. Such efforts may adversely affect the regulatory approval and commercialization of our drug candidates.

Developments by competitors may render our products or technologies obsolete or non-competitive.

Alternative technologies and products are being developed to improve or replace the use of opioids for pain management, several of which are in clinical trials or are awaiting approval from the FDA. In addition, the active ingredients in nearly all opioid drugs are available in generic form. Drug companies that sell generic opioid drugs represent substantial competition. Many of these organizations competing with us have substantially greater capital resources, larger research and development staffs and facilities, greater experience in drug development and in obtaining regulatory approvals and greater manufacturing and marketing capabilities than we do. Our competitors may market less expensive or more effective drugs that would compete with our drug candidates or reach market with competing drugs before we are able to reach market with our drug candidates. These organizations also compete with us to attract qualified personnel and partners for acquisitions, joint ventures or other collaborations.

## Business interruptions could limit our ability to operate our business.

Our operations as well as those of our collaborators on which we depend are vulnerable to damage or interruption from computer viruses, human error, natural disasters, electrical and telecommunication failures, international acts of terror and similar events. We have not established a formal disaster recovery plan and our back-up operations and our business interruption insurance may not be adequate to compensate us for losses we may suffer. A significant business interruption could result in losses or damages incurred by us and require us to cease or curtail our operations.

37

### Risks Relating to Manufacturing

We rely on third-party commercial drug manufacturers for drug supply.

Approved third-party commercial drug manufacturers may subsequently be stopped from producing, storing, shipping or testing our drug products due to their non-compliance with federal, state or local regulations. Drug manufacturers are subject to ongoing periodic unannounced inspection by the FDA, the DEA, and corresponding state and foreign government agencies to ensure strict compliance with GMP and other government regulations and corresponding foreign standards. We do not have control over third-party manufacturers compliance with these regulations and standards.

In addition, even if we enter into long-term supply arrangements with third-party suppliers, we cannot control changes in strategy by third-party suppliers that affect their ability or willingness to continue to supply our drug products on acceptable terms.

If our drug supply for one of our drug candidates was interrupted, our operations could be negatively affected.

If we cannot formulate and scale-up a wide range of dosage forms of Remoxy and other drug candidates designed to reduce potential risks of unintended use, we and King might determine that the commercial opportunity for Remoxy and these other drug candidates in certain dosage forms is too limited to warrant further investment in clinical testing and development.

We plan to formulate and scale-up a wide range of dosage forms of Remoxy and other drug candidates designed to reduce potential risks of unintended use. We may not be able to successfully complete our formulation or scale-up activities or we may determine that the commercial opportunity for Remoxy and these other drug candidates in certain dosage forms is too limited to warrant further investment. If we are unsuccessful in our formulation or scale-up activities with Remoxy and these other drug candidates, our future revenue from milestones and royalties under our strategic alliance with King may be less than expected and our operations may suffer.

We and King rely solely on Durect to provide us with certain components of Remoxy and other drug candidates designed to reduce potential risks of unintended use and will continue to rely on Durect to produce commercial supplies of these components.

We and King rely on Durect as the sole source provider of certain components of Remoxy and other drug candidates designed to reduce potential risks of unintended use, and will rely solely on Durect to produce commercial supplies of these components. Durect s failure to achieve and maintain satisfactory manufacturing standards could result in product recalls or withdrawals, delays or failures in product testing or delivery, cost overruns or other problems that could materially harm our business. Durect may encounter manufacturing difficulties involving production yields, quality control and quality assurance. Durect is subject to ongoing periodic unannounced inspection by the FDA and corresponding state and foreign agencies to ensure strict compliance with government regulations and corresponding foreign standards. We cannot control Durect s compliance with these regulations and standards.

38

To date, Durect has not produced commercial-scale supply of these components. If we and King receive marketing approval for and commercially launch Remoxy or other candidates designed to reduce potential risks of unintended use, we anticipate that Durect will need to materially expand its manufacturing capacity. Durect may not be able to increase its manufacturing capacity for Remoxy and these other drug candidates in a timely or economic manner, or at all. Moreover, significant scale up of manufacturing will require additional validation studies, which are subject to FDA review and approval. If Durect is unable to successfully increase the manufacturing capacity for such components of Remoxy and these other drugs, at an acceptable cost or otherwise, and we are unable to establish alternative manufacturing capabilities, the commercial launch or continued commercialization after a commercial launch of Remoxy and these other drugs may be delayed, prevented or impaired or there may be a shortage in supply, which would harm our future revenues and cause our business to suffer.

### Risks Relating to our Financial Position and Need for Financing

Our operating history may make it difficult for you to evaluate our business to date and to assess its future viability.

Our operations from our inception to date have been limited to organizing and staffing our company, acquiring, developing and securing our technology, undertaking preclinical studies and clinical trials of our drug candidates and forming collaborations. We have not yet demonstrated our ability to obtain regulatory approval, formulate and manufacture our drug candidates on a commercial scale or conduct sales and marketing activities. Consequently, any predictions you make about our future success or viability may not be as accurate as they could be if we had a longer operating history.

We have a history of losses and expect to incur substantial losses and negative operating cash flows for the foreseeable future.

Although we were profitable in 2006, 2007 and 2008 based on payments from King and interest income, we have yet to generate any revenues from product sales. We had an accumulated deficit of \$117.3 million as of September 30, 2009. Even if we succeed in developing and commercializing one or more of our drug candidates, we expect to continue to use significant cash resources in our operations for the foreseeable future. We anticipate that our expenses will increase substantially in the foreseeable future as we:

continue to conduct preclinical studies and clinical trials for our drug candidates;
seek regulatory approvals for our drug candidates;
develop, formulate, manufacture and commercialize our drug candidates;
implement additional internal systems and develop new infrastructure;
acquire or in-license additional products or technologies, or expand the use of our technology;
maintain, defend and expand the scope of our intellectual property; and
hire additional personnel.

#### **Table of Contents**

We will need to generate significant revenues to achieve and maintain profitability. If we cannot successfully develop, obtain regulatory approval for and commercialize our drug candidates, we will not be able to generate such revenues or achieve profitability in the future. Our failure to achieve or maintain profitability would have a material adverse impact on the market price of our common stock.

If we cannot raise additional capital on acceptable terms, we may be unable to complete planned clinical trials of any or some of our drug candidates or to pursue attractive business opportunities.

We have funded all of our operations and capital expenditures with the proceeds from our public and private stock offerings, payments received under our strategic alliance with King, and interest earned on our investments. We expect that our current cash, cash equivalents and marketable securities will be sufficient to meet our working capital and capital expenditure needs for at least the next twelve months. However, we may elect to raise additional funds within such twelve-month period or need to raise additional funds thereafter and additional financing may not be available on favorable terms, if at all. Even if we succeed in selling additional securities to raise funds, our existing stockholders ownership percentage would be reduced and new investors may demand rights, preferences or privileges senior to those of existing stockholders. If we raise additional capital through debt financing, if available, such financings may involve covenants that restrict our business activities. If we raise additional capital through strategic alliance and license arrangements such as our strategic alliance with King, we may have to trade our rights to our technology, intellectual property or drug candidates to others in such arrangements on terms that may not be favorable to us.

If we determine that we need to raise additional funds and we are not successful in doing so, we may be unable to complete the clinical development of some or all of our drug candidates or to seek or obtain FDA approval of our drug candidates. We then could be forced to discontinue product development, enter into a relationship with an additional strategic partner earlier than currently intended, reduce sales and marketing efforts or forego attractive business opportunities.

Risks Relating to an Investment in our Common Stock

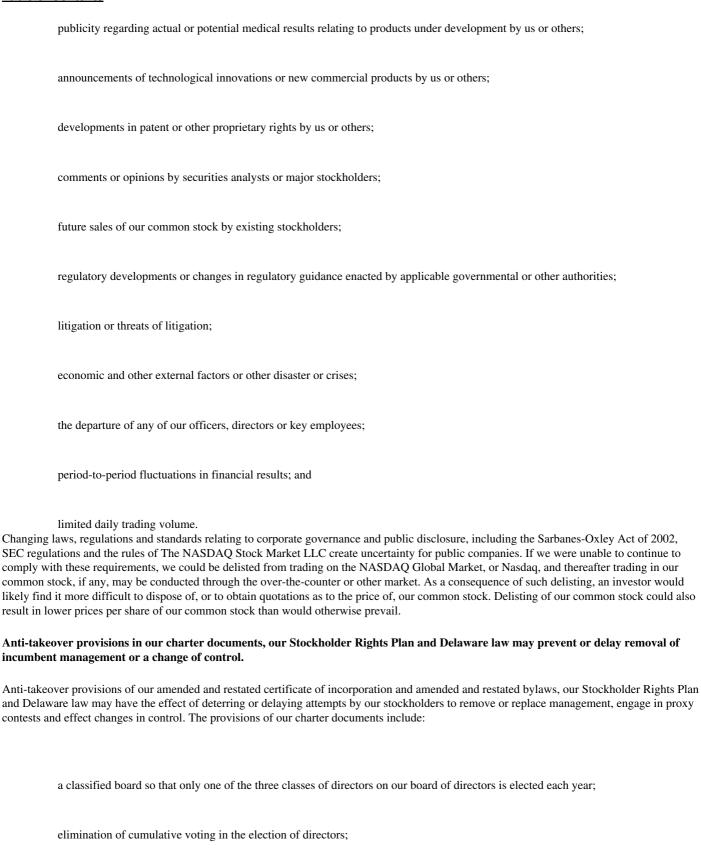

Our stock price has been volatile and could experience a sudden decline in value.

Our common stock has experienced significant price and volume fluctuations and may continue to experience volatility in the future. You may not be able to sell your shares quickly or at the latest market price if trading in our stock is not active or the volume is low. The following factors, in addition to other risk factors described in this section, may have a significant impact on the market price of our common stock:

results of or delays in efforts to seek regulatory approval for Remoxy, and in preclinical studies and clinical trials for our other drug candidates:

the success of our collaboration agreements;

40

procedures for advance notification of stockholder nominations and proposals;

the ability of our board of directors to amend our bylaws without stockholder approval; and

the ability of our board of directors to issue up to 10,000,000 shares of preferred stock without stockholder approval upon the terms and conditions and with the rights, privileges and preferences as our board of directors may determine.

The rights issued pursuant to our Stockholder Rights Plan will become exercisable, subject to certain exceptions, the tenth day after a person or group announces acquisition of 15% or more of our common stock or announces commencement of a tender or exchange offer the consummation of which would result in ownership by the person or group of 15% or more of our common stock.

41

#### **Table of Contents**

In addition, as a Delaware corporation, we are subject to Delaware law, including Section 203 of the Delaware General Corporation Law. In general, Section 203 prohibits a Delaware corporation from engaging in any business combination with any interested stockholder for a period of three years following the date that the stockholder became an interested stockholder unless certain specific requirements are met as set forth in Section 203.

These provisions, alone or together, could have the effect of deterring or delaying changes in incumbent management, proxy contests or changes in control.

### Volatility in the stock prices of other companies may contribute to volatility in our stock price.

The stock market in general, Nasdaq and the market for technology companies in particular, have experienced significant price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. Further, there has been particular volatility in the market prices of securities of early stage life sciences companies. These broad market and industry factors may seriously harm the market price of our common stock, regardless of our operating performance. In the past, following periods of volatility in the market price of a company securities, securities class action litigation has often been instituted. A securities class action suit against us could result in substantial costs, potential liabilities and the diversion of management s attention and resources.

Our share ownership is concentrated, and our officers, directors and principal stockholders can exert significant control over matters requiring stockholder approval.

Due to their combined stock holdings, our officers, directors and principal stockholders (stockholders holding greater than 5% of our common stock) acting collectively may have the ability to exercise significant influence over matters requiring stockholder approval including the election of directors and approval of significant corporate transactions. This concentration of ownership may delay or prevent a change in control of the Company and may make some transactions more difficult or impossible to complete without the support of these stockholders.

Publicly available information regarding stockholders ownership may not be comprehensive because the SEC does not require certain large stockholders to publicly disclose their stock ownership positions.

## Our operating results may fluctuate from quarter to quarter and this fluctuation may cause our stock price to decline.

Our quarterly operating results have fluctuated in the past and are likely to fluctuate in the future. Factors contributing to these fluctuations include, among other items, the timing and amounts of collaboration revenue recognized from King, the timing and enrollment rates of clinical trials for our drug candidates, our need for clinical supplies and the valuation of stock-based compensation. Thus, quarter-to-quarter comparisons of our operating results are not indicative of what we might expect in the future. As a result, in some future quarters our clinical, financial or operating results may not meet the expectations of securities analysts and investors that could result in a decline in the price of our stock.

42

## **Table of Contents**

There may not be an active, liquid trading market for our common stock.

There is no guarantee that an active trading market for our common stock will be maintained on Nasdaq. Investors may not be able to sell their shares quickly or at the latest market price if trading in our stock is not active.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

None.

Item 3. Defaults Upon Senior Securities

None.

Item 4. Submission of Matters to a Vote of Security Holders

None.

Item 5. Other Information

None.

43

### Item 6. Exhibits

The following exhibits have been filed with this report:

## Exhibit

Number	Description of Document
3.1 (1)	Amended and Restated Certificate of Incorporation.
3.2 (2)	Amended and Restated Bylaws.
4.1 (1)	Specimen Common Stock Certificate.
4.2 (3)	Preferred Stock Rights Agreement, dated as of April 28, 2005 between Registrant and Mellon Investor Services LLC, including the Certificate of Designation, the form of Rights Certificate and Summary of Rights attached thereto as Exhibits A, B and C, respectively.
4.3 (4)	Amendment to Preferred Stock Rights Agreement, dated as of September 27, 2006, between Registrant and Mellon Investor Services LLC.
31.1	Certification of Chief Executive Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.
31.2	Certification of Chief Financial Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.
32.1	Certifications of the Chief Executive Officer and the Chief Financial Officer pursuant to 18 U.S.C. Section 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.

- (1) Incorporated by reference from exhibits to our report on Form 10-Q for the period ended June 30, 2005.
- (2) Incorporated by reference from exhibits to our report on Form 10-Q for the period ended March 31, 2005.
- (3) Incorporated by reference from exhibits to our report on Form 8-K as filed with the Securities and Exchange Commission on May 3, 2005.
- (4) Incorporated by reference from exhibits to our report on Form 8-K as filed with the Securities and Exchange Commission on September 27, 2006.

44

## **SIGNATURES**

Pursuant to the requirements of the Securities Exchange Act of 1934, the Registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.

Pain Therapeutics, Inc. (Registrant)

/s/ REMI BARBIER
Remi Barbier,
Chairman of the Board of Directors,
President and Chief Executive Officer

/s/ PETER S. RODDY
Peter S. Roddy,
Vice President and Chief Financial Officer

Date: October 30, 2009
