NEWS RELEASE

Release Time IMMEDIATE
Date 20 January 2010
Number 02/10

BHP BILLITON PRODUCTION REPORT FOR THE HALF YEAR ENDED 31 DECEMBER 2009

Another half year production record for petroleum and iron ore, due to successful growth project delivery. Half year production records were also set for nickel and zinc.

Half year production records achieved at Western Australia Iron Ore, North West Shelf, Hunter Valley Energy Coal, Poitrel and Nickel West (all Australia), Samarco and Alumar refinery (both Brazil) and Zamzama (Pakistan).

Quarterly production records achieved for alumina and nickel, and at North West Shelf, Nickel West, Alumar refinery and Zamzama.

During the half year first production was achieved at Western Australia Iron Ore Rapid Growth Project 4 (RGP4), Alumar refinery expansion and Klipspruit expansion (South Africa), reflecting our continued investment through the cycle. With the completion of RGP4, Western Australia Iron Ore operations would have more than doubled its installed capacity since the accelerated growth program commenced in 2002.

During the December quarter we saw strong price recovery across the commodity suite driven by demand in China and restocking in the developed world.

Government stimulus measures appear to have supported a gradual return to normalised global trade, albeit from a low base, and most key indicators across the developed economies showed improvement.

Going forward the speed of recovery in the developed economies remains uncertain, particularly considering the eventual withdrawal of government stimulus. In China the impact of measures to control loan growth will add another future variable.

Consequently we expect some degree of volatility in the short term outlook for our commodities.

Petroleum

	DEC 2009 HALF	DEC 2009 QTR	DEC H09 vs DEC H08	DEC Q09 vs DEC Q08	DEC Q09 vs SEPT Q09
Crude Oil, Condensate and Natural Gas Liquids (000 bbl)	47,561	22,893	28%	26%	-7%
Natural Gas (bcf)	192.05	92.81	4%	3%	-6%
Total Petroleum Products (million boe)	79.57	38.36	17%	16%	-7%

Total Petroleum Production Petroleum has delivered another half year production record. Production was higher than the December 2008 half year due to ramp up of Shenzi (USA), strong reservoir performance from Atlantis and no weather related interruptions. The December 2009 quarter production decreased against the previous quarter due lower seasonal demand in eastern Australia and planned downtime at Gulf of Mexico non-operated assets Mad Dog and Atlantis (all USA).

Crude Oil, Condensate, and Natural Gas Liquids Crude and condensate production was significantly higher than the December 2008 half year due to Shenzi start-up, with the facility operating above design capacity. Strong reservoir performance from Atlantis and the lack of hurricane downtime also contributed to the significant increase in production.

Edgar Filing: BHP BILLITON LTD - Form 6-K

Production was down against the September 2009 quarter due to natural field decline, lower seasonal associated gas demand in eastern Australia and planned maintenance in Gulf of Mexico assets.

Natural Gas Production was higher than the December 2008 half year mainly due to the contribution from recently commissioned growth projects in North West Shelf (Australia) and strong natural gas production in Pakistan. Production was down against the September 2009 quarter mainly due to lower seasonal demand in eastern Australia.

Aluminium

	DEC 2009 HALF	DEC 2009 QTR	DEC H09 vs DEC H08	DEC Q09 vs DEC Q08	DEC Q09 vs SEPT Q09
Alumina (000 tonnes) (a)	1,780	939	1%	5%	12%
Aluminium (000 tonnes)	626	313	1%	1%	0%

Alumina Production was higher than all comparative periods due to the continued ramp up of the Alumar refinery expansion. Alumar is currently operating at 80 per cent of the new nameplate capacity and is expected to reach full capacity by the end of June 2010. However, production during the September 2009 quarter was impacted by an unplanned calciner outage at Worsley Alumina (Australia). The Worsley stockpiled hydrate is expected to be recovered by the end of the June 2010 financial year.

Aluminium Production across all operations was in line with comparative periods.

Base Metals

	DEC 2009 HALF	DEC 2009 QTR	DEC H09 vs DEC H08	DEC Q09 vs DEC Q08	DEC Q09 vs SEPT Q09
Copper (000 tonnes)	555.0	271.1	-10%	-12%	-5%
Lead (tonnes)	124,433	63,073	0%	-4%	3%
Zinc (tonnes)	106,260	59,835	33%	58%	29%
Silver (000 ounces)	22,458	11,689	3%	2%	9%
Uranium Oxide Concentrate (Uranium) (tonnes)	1,478	348	-25%	-60%	-69%

Copper Production was lower than comparative periods mainly due to the Clark Shaft outage at Olympic Dam (Australia), reducing production by approximately 20 thousand tonnes, and industrial action at Spence (Chile), which led to decreased production of approximately 28 thousand tonnes. This was partially offset by stronger production at Escondida (Chile) due to higher grade and the return of the Laguna Seca SAG mill to full operation, following the successful repairs completed in the September 2009 quarter.

The cessation of Pinto Valley (USA) sulphide mining in February 2009 also impacted production when compared to the December 2008 half year and quarter.

Olympic Dam ore hoisting continued to operate at approximately 25 per cent of capacity. Mining of higher grade ore zones has been prioritised following the Clark Shaft incident. Repairs to the Clark Shaft haulage system are progressing well. Currently, Clark Shaft production is expected to resume in the March 2010 quarter, however, we will regularly review the repairs development.

At 31 December 2009 the Group had 260,240 tonnes of outstanding copper sales that were revalued at a weighted average price of US\$7,297 per tonne. The final price of these sales will be determined in 2010. In addition, 234,871 tonnes of copper sales from the 2009 financial year were subject to a finalisation adjustment in the current period. The finalisation adjustment and provisional pricing impact as at 31 December 2009 will increase earnings(b) by US\$467 million for the period.

Lead Production was in line with all comparative periods.

Zinc Production was higher than all comparative periods due to increased zinc grade at Antamina and Cannington (Australia).

Silver Production was higher than all comparative periods due to increased production at Antamina and Escondida, and higher ore milled at Cannington.

Uranium Production during the December 2009 quarter was impacted by the Olympic Dam incident noted above.

Diamonds & Specialty Products

Edgar Filing: BHP BILLITON LTD - Form 6-K

	DEC 2009 HALF	DEC 2009 QTR	DEC H09 vs DEC H08	DEC Q09 vs DEC Q08	DEC Q09 vs SEPT Q09
Diamonds (000 carats)	1,540	760	13%	28%	-3%

Diamonds Production was higher than the December 2008 half year and quarter due to an increase in ore processed and the full ramp up of the Koala Underground (Canada) mine which contains a larger proportion of higher value carats. Production continues to be influenced by variability of ore sources due to the mix of open pit and underground mining.

Stainless Steel Materials

	DEC 2009 HALF	DEC 2009 QTR	DEC H09 vs DEC H08	DEC Q09 vs DEC Q08	DEC Q09 vs SEPT Q09
Nickel (000 tonnes) (c)	84.4	49.0	45%	20%	38%

Nickel Production was higher than all comparative periods due to record performance at Nickel West (Australia). The September 2009 quarter was impacted by planned maintenance at Cerro Matoso (Colombia) and a restriction in hydrogen supply at the Kwinana Nickel Refinery (Australia). The December 2008 half year also included the major furnace rebuild at the Kalgoorlie Nickel Smelter (Australia). In the December 2009 quarter, the Kalgoorlie Nickel Smelter achieved record quarterly production.

Iron Ore

	DEC 2009 HALF	DEC 2009 QTR	DEC H09 vs DEC H08	DEC Q09 vs DEC Q08	DEC Q09 vs SEPT Q09
Iron Ore (000 tonnes)	62,555	32,449	6%	11%	8%

Iron Ore Record production and shipments were achieved for the half year and quarter ended December 2009 through the utilisation of rail and port infrastructure improvements as part of RGP4. Ramp up of RGP4 is continuing with full capacity expected to be achieved by the end of calendar year 2011. Including RGP4, the full installed capacity across the Western Australia Iron Ore operations is 155 million tonnes per annum (100 per cent basis).

For the half year ended December 2009, 54 per cent of Western Australia Iron Ore shipments on a wet metric tonne basis were based on annually agreed pricing, with the remainder sold on shorter term reference pricing.

Manganese

	DEC 2009 HALF	DEC 2009 QTR	DEC H09 vs DEC H08	DEC Q09 vs DEC Q08	DEC Q09 vs SEPT Q09
Manganese Ore (000 tonnes)	2,693	1,537	-17%	9%	33%
Manganese Alloy (000 tonnes)	194	131	-49%	-28%	108%

Manganese Ore As expected, production for the December 2009 quarter was higher in line with improved demand. Production is expected to return to normal levels in the March 2010 quarter.

Manganese Alloy As highlighted in the previous report, December 2009 quarter production was approximately 65 per cent of capacity. Furnaces restarted since the September 2009 quarter are progressively ramping up as the demand environment improves. Production is expected to be at full capacity towards the end of the March 2010 quarter.

Metallurgical Coal

	DEC 2009 HALF	DEC 2009 QTR	DEC H09 vs DEC H08	DEC Q09 vs DEC Q08	DEC Q09 vs SEPT Q09
Metallurgical Coal (000 tonnes)	18,297	8,893	-5%	-12%	-5%

Metallurgical Coal The December 2009 quarterly production was impacted by planned maintenance at Queensland Coal and planned longwall moves at Illawarra Coal (both Australia). The Illawarra Coal longwall moves will continue to impact production in the March 2010 quarter. Despite lower production, record quantities of coking coal were shipped during the half year in response to stronger demand conditions.

Energy Coal

	DEC 2009 HALF	DEC 2009 QTR	DEC H09 vs DEC H08	DEC Q09 vs DEC Q08	DEC Q09 vs SEPT Q09
Energy Coal (000 tonnes)	35,519	15,460	-1%	-3%	-14%

Energy Coal Production in the December 2009 quarter was impacted by planned and unplanned interruptions

across various operations. Production at Cerrejon (Colombia) was constrained by lower demand. New Mexico (USA) was impacted by planned outages and South African mines were impacted by unplanned maintenance and weather interruptions.

(a) Excluding Suriname which was sold effective 31 July 2009.

(b) Earnings before interest and tax.

(c) Excluding Yabulu which was sold effective 31 July 2009.

Throughout this report, unless otherwise stated, production volumes refer to BHP Billiton share and exclude suspended and sold operations.

- (a) LPG and Ethane are reported as Natural Gas Liquid (NGL). Product-specific conversions are made and NGL is reported in barrels of oil equivalent (boe).
- (b) Suriname was sold effective 31 July 2009.
- (c) Metal production is reported on the basis of payable metal.
- (d) The Pinto Valley operations were placed on care and maintenance in February 2009.
- (e) Yabulu was sold effective 31 July 2009.
- (f) Iron ore production is reported on a wet tonnes basis.
- (g) Newman includes Mt Newman Joint Venture and Jimblebar.

Edgar Filing: BHP BILLITON LTD - Form 6-K

- (h) Shown on 100% basis. BHP Billiton interest in saleable production is 60%.
- (i) Production includes Medium Carbon Ferro Manganese.
- (j) Metallurgical coal production is reported on the basis of saleable product. Production figures include some thermal coal.
- (k) Shown on 100% basis. BHP Billiton interest in saleable production is 80%.
