(a) Pre-provision profit is total net revenue less noninterest expense. The Firm believes that this financial measure is useful in assessing the ability of a lending institution to generate income in excess of its provision for credit losses.

(b) On March 18, 2011, the Board of Directors increased the Firm's quarterly common stock dividend from \$0.05 to \$0.25 per share.

(c) Share prices shown for JPMorgan Chase's common stock are from the New York Stock Exchange. JPMorgan Chase's common stock is also listed and traded on the London Stock Exchange and the Tokyo Stock Exchange.

Tier 1 common capital ratio ("Tier 1 common ratio") is Tier 1 common divided by risk-weighted assets. The Firm (d)uses Tier 1 common capital ("Tier 1 common") along with the other capital measures to assess and monitor its capital position. For further discussion, see Regulatory capital on pages 57–60 of this Form 10-Q.

Effective January 1, 2011, the long-term portion of advances from Federal Home Loan Banks ("FHLBs") was (e)reclassified from other borrowed funds to long-term debt. Prior periods have been revised to conform with the current presentation.

(f) Excludes the impact of home lending purchased credit-impaired ("PCI") loans. For further discussion, see Allowance for credit losses on pages 86–88 of this Form 10-Q.

(g) Net charge-offs and net charge-off rates for the fourth quarter of 2010 include the effect of \$632 million of charge-offs related to the estimated net realizable value of the collateral underlying delinquent residential home loans. Because these losses were previously recognized in the provision and allowance for loan losses, this adjustment had no impact on the Firm's net income.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

This section of the Form 10-Q provides management's discussion and analysis ("MD&A") of the financial condition and results of operations of JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm"). See the Glossary of terms on pages 186–189 for definitions of terms used throughout this Form 10-Q. The MD&A included in this Form 10-Q contains statements that are forward-looking within the meaning of the Private Securities Litigation Reform Act of 1995. Such statements are based on the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. These risks and uncertainties could cause the Firm's actual results to differ materially from those set forth in such forward-looking statements. For a discussion of such risks and uncertainties, see Forward-looking Statements on page 97 and Part II, Item 1A, Risk Factors on pages 192–193 of this Form 10-Q, and Part I, Item 1A, Risk Factors on pages 5–12 of JPMorgan Chase's Annual Report on Form 10-K for the year ended December 31, 2010, filed with the U.S. Securities and Exchange Commission ("2010 Annual Report" or "2010 Form 10-K"), to which reference is hereby made.

INTRODUCTION

JPMorgan Chase & Co., a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States of America ("U.S."), with \$2.2 trillion in assets, \$182.9 billion in stockholders' equity and operations in more than 60 countries as of June 30, 2011. The Firm is a leader in investment banking, financial services for consumers and small business, commercial banking, financial transaction processing, asset management and private equity. Under the J.P. Morgan and Chase brands, the Firm serves millions of customers in the U.S. and many of the world's most prominent corporate, institutional and government clients.

JPMorgan Chase's principal bank subsidiaries are JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank, N.A."), a national bank with branches in 23 states in the U.S.; and Chase Bank USA, National Association ("Chase Bank USA, N.A."), a national bank that is the Firm's credit card issuing bank. JPMorgan Chase's principal nonbank subsidiary is J.P. Morgan Securities LLC ("JPMorgan Securities"), the Firm's U.S. investment banking firm. JPMorgan Chase's activities are organized, for management reporting purposes, into six business segments, as well as Corporate/Private Equity. The Firm's wholesale businesses comprise the Investment Bank, Commercial Banking, Treasury & Securities Services and Asset Management segments. The Firm's consumer businesses comprise the Retail Financial Services and Card Services segments. A description of the Firm's business segments, and the products and services they provide to their respective client bases, follows.

Investment Bank

J.P. Morgan is one of the world's leading investment banks, with deep client relationships and broad product capabilities. The clients of the Investment Bank ("IB") are corporations, financial institutions, governments and institutional investors. The Firm offers a full range of investment banking products and services in all major capital markets, including advising on corporate strategy and structure, capital-raising in equity and debt markets, sophisticated risk management, market-making in cash securities and derivative instruments, prime brokerage, and research.

Retail Financial Services

Retail Financial Services ("RFS") serves consumers and businesses through personal service at bank branches and through ATMs, online banking and telephone banking, as well as through auto dealerships and school financial-aid offices. Customers can use more than 5,300 bank branches (third-largest nationally) and more than 16,400 ATMs (second-largest nationally), as well as online and mobile banking around the clock. More than 30,900 branch salespeople assist customers with checking and savings accounts, mortgages, home equity and business loans, and investments across the 23-state footprint from New York and Florida to California. Consumers also can obtain loans through more than 16,500 auto dealerships and can get student loans certified by more than 1,900 schools and universities nationwide.

Card Services

Card Services ("CS") is one of the nation's largest credit card issuers, with over \$125 billion in loans and over 65 million open accounts. In the six months ended June 30, 2011, customers used Chase cards to meet \$163 billion of their

spending needs. Through its merchant acquiring business, Chase Paymentech Solutions, CS is a global leader in payment processing and merchant acquiring.

Commercial Banking

Commercial Banking (“CB”) delivers extensive industry knowledge, local expertise and dedicated service to nearly 25,000 clients nationally, including corporations, municipalities, financial institutions and not-for-profit entities with annual revenue generally ranging from \$10 million to \$2 billion, and nearly 35,000 real estate investors/owners. CB partners with the Firm’s other businesses to provide comprehensive solutions, including lending, treasury services, investment banking and asset management, to meet its clients’ domestic and international financial needs.

Treasury & Securities Services

Treasury & Securities Services (“TSS”) is a global leader in transaction, investment and information services. TSS is one of the world’s largest cash management providers and a leading global custodian. Treasury Services (“TS”) provides cash management, trade, wholesale card and liquidity products and services to small- and mid-sized companies, multinational corporations, financial institutions and government entities. TS partners with IB, CB, RFS and Asset Management businesses to serve clients firmwide. Certain TS revenue is included in other segments’ results.

Worldwide Securities Services holds, values, clears and services securities, cash and alternative investments for investors and broker-dealers, and manages depositary receipt programs globally.

Asset Management

Asset Management (“AM”), with assets under supervision of \$1.9 trillion, is a global leader in investment and wealth management. AM clients include institutions, retail investors and high-net-worth individuals in every major market throughout the world. AM offers global investment management in equities, fixed income, real estate, hedge funds, private equity and liquidity products, including money-market instruments and bank deposits. AM also provides trust and estate, banking and brokerage services to high-net-worth clients, and retirement services for corporations and individuals. The majority of AM’s client assets are in actively managed portfolios.

EXECUTIVE OVERVIEW

This executive overview of MD&A highlights selected information and may not contain all of the information that is important to readers of this Form 10-Q. For a complete description of events, trends and uncertainties, as well as the capital, liquidity, credit and market risks, and the critical accounting estimates affecting the Firm and its various lines of business, this Form 10-Q should be read in its entirety.

Economic environment

The U.S. economic recovery continued in the second quarter of 2011, though the pace seemed to have slowed, due, in part, to the major disruptions in the global supply chain for the auto industry as a result of the earthquake and tsunami in Japan and the sharp rise in oil prices during the first half of the year. Labor market indicators were weaker than anticipated in the second quarter and the struggling housing and construction sectors remained depressed. However, household spending and business investment in equipment and software continued to expand.

To promote a faster pace of economic recovery, the Federal Reserve maintained its existing policy of reinvesting principal payments from its securities holdings and completed the purchase of \$600 billion of longer-term Treasury securities in the second quarter. The Federal Reserve also held the target range for the federal funds rate at zero to one-quarter percent and continued to indicate that economic conditions were likely to warrant a low federal funds rate for an extended period.

Business overview

JPMorgan Chase reported second-quarter 2011 net income of \$5.4 billion, or \$1.27 per share, on net revenue of \$26.8 billion. Net income was up 13% compared with net income of \$4.8 billion, or \$1.09 per share, in the second quarter of 2010. ROE for the quarter was 12%, unchanged from the prior year. Current-quarter results included a \$1.0 billion pretax (\$0.15 per share after-tax) benefit from a reduction in the allowance for loan losses in Card Services; an \$837 million pretax (\$0.12 per share after-tax) benefit from securities gains in Corporate; a \$1.0 billion pretax (\$0.15 per share after-tax) expense for estimated costs of foreclosure-related matters in Retail Financial Services; and \$1.3 billion pretax (\$0.19 per share after-tax) of additional litigation reserves, predominantly for mortgage-related matters, in Corporate.

The increase in net income for the second quarter of 2011 was driven by higher net revenue and a significantly lower provision for credit losses, largely offset by higher noninterest expense. Net revenue growth resulted from higher levels of principal transactions revenue, investment banking fees and asset management, administration and commissions revenue, partially offset by lower net interest income and lower securities gains. The decrease in the provision for credit losses reflected improvement in the credit environment. The increase in noninterest expense was driven by higher noncompensation expense due to additional litigation reserves, predominantly for mortgage-related matters, and expense for the estimated costs of foreclosure-related matters.

The Firm's second-quarter results reflected strong earnings and solid client flows in the Investment Bank, record revenue and continued loan growth in Commercial Banking, and solid performance across most other businesses. Retail Banking within Retail Financial Services continued to demonstrate good underlying performance, but RFS overall continued to be negatively affected by high expenses for mortgage-related issues, including a \$1.0 billion expense for estimated litigation and other costs of foreclosure-related matters. Results for the second quarter also reflected continued improvement in credit trends across the consumer and wholesale portfolios. With respect to the credit card portfolio, delinquencies and net charge-offs improved, and the Firm reduced loan loss reserves by \$1.0 billion as estimated losses declined. With respect to the mortgage portfolio, delinquency and net charge-off trends improved modestly compared with the prior quarter; however, net charge-offs remained high, and credit losses are expected to remain elevated.

JPMorgan Chase's balance sheet remained strong, ending the second quarter with a Basel I Tier 1 Common ratio of 10.1%. This strong and growing capital base enabled the Firm to repurchase \$3.5 billion of common stock during the quarter. Total firmwide credit reserves at quarter-end were \$29.1 billion, resulting in a firmwide loan loss coverage ratio of 3.83%, excluding purchased credit-impaired loans. Total stockholders' equity at June 30, 2011, was \$182.9 billion.

Net income for the first six months of 2011 was \$11.0 billion, or \$2.55 per share, compared with \$8.1 billion, or \$1.83 per share, in the first half of 2010. The increase was driven by a significantly lower provision for credit losses, partially offset by higher noninterest expense and lower net revenue. The lower provision for credit losses reflected an improved credit environment. The modest decline in net revenue for the first six months of the year was driven by lower net interest income, mortgage fees and related income and securities gains, largely offset by higher levels of principal transactions revenue, investment banking fees and asset management, administration and commissions revenue. The increase in noninterest expense compared with the first six months of 2010 was driven by expenses taken for the estimated costs of foreclosure-related matters in RFS and higher compensation expense.

During the first six months of 2011, JPMorgan Chase provided credit to and raised capital of over \$990 billion for its clients. The Firm originated mortgages to more than 360,000 people; provided credit cards to approximately 4.6 million people; lent or increased credit to more than 16,800 small businesses; lent to more than 800 not-for-profit and government entities, including states, municipalities, hospitals and universities; extended or increased loan limits to approximately 3,000 middle-market companies; and lent to or raised capital for more than 5,000 other corporations. JPMorgan Chase is the #1 Small Business Administration lender in the U.S. with more loans made than any other lender. In 2009 and 2010, the Firm lent more than \$7 billion and \$10 billion, respectively, to small businesses, and has committed to lend at least \$12 billion in 2011. The Firm remains committed to helping homeowners and preventing foreclosures; since the beginning of 2009, JPMorgan Chase has offered 1,177,000 trial modifications to struggling homeowners.

The discussion that follows highlights the performance of each business segment compared with the prior-year quarter and presents results on a managed basis. For more information about managed basis, as well as other non-GAAP financial measures used by management to evaluate the performance of each line of business, see pages 14–16 of this Form 10-Q.

Investment Bank net income increased from the prior year, reflecting higher net revenue and lower noninterest expense, partially offset by a lower benefit from the provision for credit losses. The increase in net revenue was largely driven by higher investment banking fees and solid client revenue in Fixed Income and Equity Markets. Credit Portfolio revenue was a loss, primarily reflecting the negative net impact of credit-related valuation adjustments, largely offset by net interest income and fees on retained loans. The provision for credit losses was a smaller benefit in the second quarter of 2011 compared with the second quarter of 2010 and reflected a reduction in the allowance for loan losses, largely due to net repayments. Noninterest expense decreased, driven by lower compensation expense. The prior-year results included the impact of the U.K. Bank Payroll Tax.

Retail Financial Services net income decreased compared with the prior year as higher noninterest expense was largely offset by a lower provision for credit losses and higher net revenue. The increase in net revenue was driven by higher mortgage fees and related income, deposit balances, debit card income, deposit-related fees and investment sales revenue, partially offset by lower loan balances due to portfolio runoff. The provision for credit losses decreased, as delinquency trends and net charge-offs modestly improved compared with the prior year. However, the current-quarter provision continued to reflect elevated losses in the mortgage and home equity portfolios. Noninterest expense increased, driven by elevated foreclosure and default-related costs, including \$1.0 billion for estimated litigation and other costs of foreclosure-related matters.

Card Services net income increased compared with the second quarter of 2010 driven by a lower provision for credit losses, partially offset by lower net revenue. The decrease in net revenue was driven by a decline in net interest income, reflecting lower average loan balances (including the impact of the Kohl's portfolio sale), the impact of legislative changes and a decreased level of fees. These decreases were largely offset by lower revenue reversals associated with lower net charge-offs. The provision for credit losses decreased from the prior year, reflecting lower net charge-offs and a \$1.0 billion reduction in the allowance for loan losses due to lower estimated losses. Noninterest

expense increased, due to higher marketing expense and the inclusion of the Commercial Card business. Sales volume, excluding the Washington Mutual and Commercial Card portfolios, was \$83.1 billion, an increase of 10% from the prior year.

Commercial Banking net income decreased, driven by an increase in the provision for credit losses, partially offset by record net revenue. Record net revenue was driven by growth in liability balances, wider loan spreads, higher investment banking revenue and growth in loan balances, partially offset by spread compression on liability products. The provision for credit losses was an expense compared with a benefit in the prior-year. Noninterest expense increased, primarily reflecting higher headcount-related expense. End-of-period loans of \$102.7 billion, up 7% compared with the second quarter 2010, have increased for four consecutive quarters. Average liability balances of \$162.8 billion have increased 19% from the second quarter 2010.

Treasury & Securities Services net income increased from the prior year, driven by higher net revenue and the credit allocation benefit related to the Global Corporate Bank ("GCB"), partially offset by higher noninterest expense.

Worldwide Securities Services net revenue increased, driven by higher market levels, higher net interest income and net inflows of assets under custody. Assets

under custody were a record \$16.9 trillion, an increase of 14% from the prior year. Treasury Services net revenue was relatively flat as higher trade loan volumes and higher deposit balances were largely offset by the effect of the transfer of the Commercial Card business to CS and lower spreads on deposits. Higher noninterest expense was driven by continued investment in new product platforms, primarily related to international expansion, partially offset by the transfer of the Commercial Card business to CS.

Asset Management net income increased from the prior year, reflecting higher net revenue, predominantly offset by higher noninterest expense. The growth in net revenue was driven by the effect of higher market levels, net inflows to products with higher margins, higher valuations of seed capital investments, higher deposit and loan balances, and higher performance fees. The increase in revenue was partially offset by narrower deposit spreads. Assets under supervision of \$1.9 trillion increased 17% from the prior year due to the effect of higher market levels and net inflows to long-term products, partially offset by net outflows from liquidity products. Noninterest expense increased, largely resulting from an increase in headcount and higher performance-based compensation.

Corporate/Private Equity net income decreased compared with the second quarter of 2010. Private equity revenue increased, primarily driven by gains on sales and net increases in investment valuations. Net interest income and securities gains decreased from the prior year. Noninterest expense was higher and included \$1.3 billion of additional litigation reserves, predominantly for mortgage-related matters. Noninterest expense in the prior year included \$694 million of additional litigation reserves.

2011 Business outlook

The following forward-looking statements are based on the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. These risks and uncertainties could cause the Firm's actual results to differ materially from those set forth in such forward-looking statements. See Forward-Looking Statements on page 97 and Risk Factors on pages 192–193 of this Form 10-Q.

JPMorgan Chase's outlook for the second half of 2011 should be viewed against the backdrop of the global and U.S. economies, financial markets activity, the geopolitical environment, the competitive environment, client activity levels, and regulatory and legislative developments in the U.S. and other countries where the Firm does business. Each of these linked factors will affect the performance of the Firm and its lines of business.

In the Mortgage Banking, Auto & Other Consumer Lending business within RFS, if mortgage interest rates remain at current levels or rise in the future, management anticipates that loan production and margins will be negatively affected, resulting in lower revenue for this business for full-year 2011 when compared with 2010. In addition, revenue in 2011 will continue to be negatively affected by continued elevated levels of repurchases of mortgages previously sold, predominantly to U.S. government-sponsored entities ("GSEs"). Management estimates that realized repurchase losses could be approximately \$1.2 billion on an annualized basis for the remainder of 2011.

The Firm expects noninterest expense in Mortgage Banking, Auto & Other Consumer Lending to remain, for the remainder of the year, at elevated levels similar to those incurred in the first half of 2011 (excluding the \$1.7 billion expense incurred during the first half of 2011 for various estimated costs related to foreclosure delays and potential settlements with federal and state officials). These higher levels of noninterest expense are expected in light of increased servicing costs to enhance the Firm's mortgage servicing processes, particularly loan modification and foreclosure procedures, and comply with the Consent Orders entered into with the banking regulators. (See Enhancements to Mortgage Servicing on pages 84–85 and Note 23 on pages 172–179 of this Form 10-Q for further information about the Consent Orders.) It is also possible that the Firm will incur additional fees and assessments related to foreclosure delays as well as other costs in connection with the potential settlement of the governmental investigations related to the Firm's mortgage servicing procedures.

In the Real Estate Portfolios business within RFS, management believes that, based on the current outlook for delinquencies and loss severity, total quarterly net charge-offs could be approximately \$1.2 billion. Given current origination and production levels, combined with management's current estimate of portfolio runoff levels, the residential real estate portfolio is expected to decline by approximately 10% to 15% annually for the foreseeable future. The annual reduction in the residential real estate portfolio is expected to reduce net interest income in each period, including a reduction of approximately \$700 million for full-year 2011 from the 2010 level, assuming no changes in interest rates during the year. However, over time, the reduction in net interest income is expected to be

more than offset by an improvement in credit costs and lower expenses. As the portfolio continues to run off, management anticipates that approximately \$1.0 billion of capital may become available for redeployment each year, subject to the capital requirements associated with the remaining portfolio.

In CS, given current high repayment rates, management expects end-of-period outstandings for the Chase portfolio (excluding the Washington Mutual and Commercial Card portfolios) could be between \$115 billion and \$120 billion by the end of 2011. Management estimates that the Washington Mutual portfolio could decline to \$10 billion by the end of 2011.

Net charge-off rates for both the Chase and Washington Mutual credit card portfolios are anticipated to continue to improve. If current delinquency trends continue, management anticipates the net charge-off rate for the Chase portfolio (excluding the Washington Mutual and Commercial Card portfolios) could be approximately 4.5% for the third quarter of 2011. Recent reserve

releases from the credit card allowance for loan losses reflect the continued improvement in the credit cycle. Management anticipates that as credit card net charge-offs begin to stabilize towards a normal through-the-cycle level, releases from the allowance will decline and eventually abate.

Economic data for the first half of 2011 seemed to imply that U.S. economic growth has slowed, and high unemployment rates and the difficult housing market have been persistent. Ongoing weak economic conditions, combined with elevated delinquencies and ongoing discussions regarding mortgage foreclosure-related matters with federal and state officials, continue to result in a high level of uncertainty in the residential real estate portfolio. Further declines in U.S. housing prices and increases in the unemployment rate remain possible; were this to occur, currently anticipated results for both RFS and CS could be adversely affected.

In IB, TSS and AM, revenue will be affected by market levels, volumes and volatility, which will influence client flows and assets under management, supervision and custody. In addition, the wholesale credit environment will influence levels of charge-offs, repayments and provision for credit losses for IB, CB and TSS.

In Private Equity, within the Corporate/Private Equity segment, earnings will likely continue to be volatile and be influenced by capital markets activity, market levels, the performance of the broader economy and investment-specific issues. Corporate's net interest income levels will generally trend with the size and duration of the investment securities portfolio. Corporate net income, excluding Private Equity, and excluding significant litigation expense and significant nonrecurring items, is anticipated to trend toward approximately \$300 million per quarter. Furthermore, continued repositioning of the investment securities portfolio in Corporate, changes in the mix of loans within the consumer loan portfolio and other factors, including continued low interest rates, could result in further downward pressure on the Firm's net interest margin in the third quarter of 2011.

The Firm faces litigation in its various roles as issuer and/or underwriter in mortgage-backed securities ("MBS") offerings, primarily related to offerings involving third parties other than the GSEs. It is possible that these matters will take a number of years to resolve; their ultimate resolution is inherently uncertain and reserves for such litigation matters may need to be increased in the future.

Management and the Firm's Board of Directors continually evaluate ways to deploy the Firm's strong capital base in order to enhance shareholder value. Such alternatives could include the repurchase of common stock and warrants, increasing the common stock dividend and pursuing alternative investment opportunities. The Firm expects to utilize the authorized \$15.0 billion, multi-year common equity repurchase program, of which up to \$8.0 billion is approved by the Federal Reserve for 2011, to, at a minimum, repurchase the same amount of shares that it issues for employee stock-based incentive awards. Beyond this, the Firm intends to repurchase its common equity only when the Firm is generating capital in excess of that which is needed to fund its organic growth and when, in management's judgment, such repurchases provide excellent value to the Firm's existing shareholders. Management and the Board will continue to assess and make decisions regarding alternatives for deploying capital, as appropriate, over the course of the year. Any planned future dividend increases over the current level, or planned use of the repurchase program over the repurchases approved for 2011, will be reviewed by the Firm with its banking regulators before taking action.

Regulatory developments

JPMorgan Chase is subject to regulation under state and federal laws in the U.S., as well as the applicable laws of each of the various other jurisdictions outside the U.S. in which the Firm does business. The Firm is currently experiencing a period of unprecedented change in regulation and such changes could have a significant impact on how the Firm conducts business. The Firm continues to work diligently in assessing and understanding the implications of the regulatory changes it is facing, and is devoting substantial resources to implementing all the new rules and regulations while meeting the needs and expectations of its clients. While the Firm has made a preliminary assessment of the likely impact of certain of the anticipated changes, as more fully described below, the Firm cannot, given the current status of the regulatory developments, quantify the possible effects on its business and operations of all of the significant changes that are underway. See Risk Factors on pages 192–193 of this Form 10-Q for additional information.

In February 2011, pursuant to the Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd-Frank Act”), the FDIC issued a final rule changing its methodology for calculating the deposit insurance assessment rate for large banks. The new rule changes the assessment base from insured deposits to average consolidated total assets less average tangible equity, and changes the assessment rate calculation. These changes became effective on April 1, 2011, and, based on the Firm’s understanding of the final rule, are expected to result in an aggregate annualized increase of approximately \$500 million in the assessments that the Firm’s bank subsidiaries pay to the FDIC. In June 2011, the Board of Governors of the Federal Reserve System (the “Federal Reserve”) adopted rules implementing the Durbin Amendment provisions of the Dodd-Frank Act, which limits the amount the Firm may charge for each debit card transaction it processes. Based on the Firm’s current understanding of the final rules, which become effective on October 1, 2011, it is anticipated that such rules will result, absent mitigation, in a decline in aggregate annualized gross revenue for Retail Banking of approximately \$1.0 billion, beginning in the fourth quarter of 2011. The Firm is considering various actions it may take to mitigate some of the anticipated decline in revenue over time, though any mitigating actions are not expected to wholly offset the loss of revenue. Accordingly, the final effect of this regulation cannot be determined at this time.

The Firm will also be affected by the requirements of Section 619 of the Dodd-Frank Act, and specifically the provisions prohibiting proprietary trading and restricting the activities involving private equity and hedge funds (the “Volcker Rule”). However, the revenue and net earnings generated by the Firm’s proprietary trading activities represent a de minimis portion of the revenue and net earnings of the IB line of business and of the Firm overall. The Firm ceased some proprietary trading activities during 2010, and is planning to cease its remaining proprietary trading activities within the timeframe mandated by the Volcker Rule. In addition, the application of the Volcker Rule to the Firm’s private equity and hedge fund activities in its AM and IB lines of business, as well as in the Corporate/Private Equity sector, is not expected to have a significant effect on the revenue or net earnings of the Firm or those lines of business. The Firm expects that certain private equity and hedge fund activities or investments expected to be within the scope of the Volcker Rule will be redeemed or liquidated within the timeframe mandated by the Volcker Rule and the Firm is currently assessing alternative means by which either to exit any remaining activities and investments or conform them to the requirements of the Volcker Rule within the timeframe mandated.

While regulators have not yet proposed many of the rules to implement the Volcker Rule, in order to begin planning for its implementation, the Firm has attempted to identify the activities it expects to be affected by the Volcker Rule. In this regard, the Firm defines “proprietary trading” as the trading of securities, derivatives, or futures (or options on any of the foregoing) that is predominantly used to realize gains from short-term movements in prices for the Firm’s own account. The Firm’s proprietary trading activities are typically conducted separately from other business activities and segregated organizationally and physically from client market-making and other client-driven businesses as well as from risk management activities. The Firm’s definition of proprietary trading does not include client market-making, long term investment activities or risk management activities. However, until the remainder of the implementing rules are adopted, the Firm will not know the extent to which the Volcker Rule will affect its ability to engage in these activities.

In June 2011, the Basel Committee and the Financial Stability Board (“FSB”) announced that certain global systemically important banks (“GSIBs”) would be required to maintain additional capital, above the Basel III Tier 1 common equity

minimum, in amounts ranging from 1% to 2.5%, depending upon the bank's systemic importance. Furthermore, in order to provide a disincentive for banks facing the highest required level of Tier 1 common equity to "increase materially their global systemic importance in the future," an additional 1% charge could be applied. JPMorgan Chase estimates that its Basel III Tier 1 common ratio was approximately 7.6% at the end of the second quarter of 2011. This level is well in excess of that which is required today under existing rules and is greater than the level the Firm expects will be required under the proposed rules for up to five years, including the additional buffer for GSIBs. The Firm expects that its strong capital position and significant earnings power will allow it to actively grow its business and rapidly meet any proposed Basel III requirements as they are phased in. The Firm intends to keep its capital ratios approximately at current levels, subject to regulatory approval, as management does not see a need to manage to higher ratios ahead of time.

CONSOLIDATED RESULTS OF OPERATIONS

The following section provides a comparative discussion of JPMorgan Chase's Consolidated Results of Operations on a reported basis for the three and six months ended June 30, 2011 and 2010. Factors that relate primarily to a single business segment are discussed in more detail within that business segment. For a discussion of the Critical Accounting Estimates Used by the Firm that affect the Consolidated Results of Operations, see pages 92–95 of this Form 10-Q and pages 149–154 of JPMorgan Chase's 2010 Annual Report.

Revenue (in millions)	Three months ended June 30,			Six months ended June 30,		
	2011	2010	Change	2011	2010	Change
Investment banking fees	\$1,933	\$1,421	36 %	\$3,726	\$2,882	29 %
Principal transactions	3,140	2,090	50	7,885	6,638	19
Lending- and deposit-related fees	1,649	1,586	4	3,195	3,232	(1)
Asset management, administration and commissions	3,703	3,349	11	7,309	6,614	11
Securities gains	837	1,000	(16)	939	1,610	(42)
Mortgage fees and related income	1,103	888	24	616	1,546	(60)
Credit card income	1,696	1,495	13	3,133	2,856	10
Other income	882	585	51	1,456	997	46
Noninterest revenue	14,943	12,414	20	28,259	26,375	7
Net interest income	11,836	12,687	(7)	23,741	26,397	(10)
Total net revenue	\$26,779	\$25,101	7 %	\$52,000	\$52,772	(1)%

Total net revenue for the second quarter of 2011 was \$26.8 billion, an increase of \$1.7 billion, or 7%, from the second quarter of 2010. Revenue growth was driven by higher levels of principal transactions revenue, investment banking fees, and asset management, administration and commissions revenue, largely offset by lower net interest income. For the first six months of 2011, total net revenue was \$52.0 billion, a modest decline compared with the first six months of 2010, as lower net interest income, mortgage fees and related income, and securities gains more than offset revenue growth from higher levels of principal transactions revenue, investment banking fees, and asset management, administration and commissions revenue.

Investment banking fees increased compared with both the second quarter and first six months of 2010 and were a record for the first six months of 2011. Debt underwriting fees were also a record for the first six months of 2011. Advisory fees, debt underwriting fees and equity underwriting fees were higher in both periods of comparison, as industry-wide M&A and capital-raising volumes increased from their 2010 levels. For additional information on investment banking fees, which are primarily recorded in IB, see IB segment results on pages 19–22 of this Form 10-Q. Principal transactions revenue increased compared with the second quarter and first six months of 2010, primarily driven by gains on sales and net increases in investment valuations in Corporate/Private Equity, as a result of continued improvement in market conditions related to certain portfolio investments. Trading revenue increased in the second quarter of 2011 compared with the second quarter of 2010 but decreased in the first half of 2011 compared with the first half of 2010. Client revenue in IB remained solid in both periods of comparison, reflecting the strength and depth of the client franchise. For additional information on principal transactions revenue, see IB and Corporate/Private Equity segment results on pages 19–22 and 46–47, respectively, and Note 6 on pages 124–125 of this Form 10-Q.

Lending- and deposit-related fees increased in the second quarter of 2011 compared with the prior year. The increase was primarily driven by the introduction of a new checking account product offering in RFS, and the conversion of some existing checking accounts into the new product offering; partially offset by the impact of nonsufficient fund/overdraft (“NSF/OD”) regulatory and policy changes. For the first six months of 2011, lending- and deposit-related fees declined slightly compared with the prior year, reflecting lower deposit-related fees in RFS associated, in part, with the impact of the aforementioned regulatory and policy changes. These declines were partially offset by higher

lending-related fees in IB. For additional information on lending- and deposit-related fees, which are mostly recorded in RFS, CB, TSS and IB, see RFS on pages 23–32, CB on pages 36–38, TSS on pages 39–41 and IB segment results on pages 19–22 of this Form 10-Q.

Asset management, administration and commissions revenue increased from the second quarter and first six months of 2010. The increases reflected higher asset management fees in AM, driven by the effect of higher market levels and net inflows to longer-term products with higher margins. To a lesser extent, higher administration fees in TSS, reflecting the effect of higher market levels and net inflows of assets under custody, also contributed to the increases in revenue. For additional information on these fees and commissions, see the segment discussions for AM on pages 42–45 and TSS on pages 39–41 of this Form 10-Q.

Securities gains decreased from the second quarter and first six months of 2010, resulting primarily from the repositioning of the portfolio in response to changes in the interest rate environment and rebalancing exposures. For additional information on securities gains, which are mostly recorded in the Firm's Corporate segment, see the Corporate/Private Equity segment discussion on pages 46–47 of this Form 10-Q.

Mortgage fees and related income increased compared with the second quarter of 2010, driven by an increase in production revenue, reflecting wider margins and lower levels of repurchase losses; this increase was largely offset by a decrease in net mortgage servicing revenue due to lower MSR risk management revenue. Mortgage fees and related income decreased compared with the first six months of 2010; the decrease was driven by a \$1.1 billion decline in the fair value of the MSR asset that was recognized in the first quarter of 2011 related to a revised cost to service assumption incorporated into the valuation to reflect the estimated impact of higher servicing costs to enhance servicing processes – particularly loan modification and foreclosure procedures, and higher estimated costs to comply with Consent Orders entered into with banking regulators. The decline in the fair value of the MSR asset also resulted from a decrease in interest rates. Partially offsetting the decrease was an increase in production revenue, driven by the impact of higher mortgage origination volumes and wider margins, as well as lower levels of repurchase losses. For additional information on mortgage fees and related income, which is recorded primarily in RFS, see RFS's Mortgage Banking, Auto & Other Consumer Lending discussion on pages 27-29 of this Form 10-Q. For additional information on repurchase losses, see the Mortgage repurchase liability discussion on pages 53-56 and Note 21 on pages 167-171 of this Form 10-Q.

Credit card income increased in both the second quarter and first half of 2011. The increase in the quarter largely reflected higher net interchange income associated with higher customer charge volume on debit and credit cards, as well as lower partner revenue-sharing (a contra-revenue item) due to the impact of the Kohl's portfolio sale. The increase in the first six months of 2011 was driven by higher net interchange income, partially offset by lower revenue from fee-based products. For additional information on credit card income, see the CS and RFS segment results on pages 33–35, and pages 23–32, respectively, of this Form 10-Q.

Other income increased compared with the second quarter and first six months of 2010, driven by valuation adjustments on certain assets and incremental income from recent acquisitions in IB, as well as higher valuations of seed capital investments in AM. Higher auto operating lease income in RFS, resulting from growth in lease volume, also contributed to the increase.

Net interest income decreased in the second quarter and first six months of 2011 compared with the prior year. The declines in both periods were driven by lower yields on securities; lower average loan balances and yields, primarily in CS and RFS, reflecting the expected runoff of credit card balances and residential real estate loans; lower fees on credit card receivables, reflecting the impact of legislative changes; and lower yields on deposits. The decrease was offset partially by lower revenue reversals associated with lower credit card charge-offs, and higher average deposit balances. The Firm's average interest-earning assets were \$1.8 trillion in the second quarter of 2011, and the net yield on those assets, on a fully taxable-equivalent (“FTE”) basis, was 2.72%, a decrease of 34 basis points from the second quarter of 2010. For the first six months of 2011, average interest-earning assets were \$1.7 trillion, and the net yield on those assets, on an FTE basis, was 2.80%, a decrease of 39 basis points from the first six months of 2010. For further information on the impact of the legislative changes on the Consolidated Statements of Income, see CS discussion on credit card legislation on page 79 of JPMorgan Chase's 2010 Annual Report.

Provision for credit losses (in millions)	Three months ended June 30,			Six months ended June 30,		
	2011	2010	Change	2011	2010	Change
Wholesale	\$(117)	\$(572)	80 %	\$(503)	\$(808)	38 %
Consumer, excluding credit card	1,117	1,714	(35)	2,446	5,448	(55)
Credit card	810	2,221	(64)	1,036	5,733	(82)
Total consumer	1,927	3,935	(51)	3,482	11,181	(69)
Total provision for credit losses	\$1,810	\$3,363	(46)%	\$2,979	\$10,373	(71)%

The provision for credit losses decreased significantly compared with the second quarter and first six months of 2010. The credit card provision was down from both prior-year periods, driven primarily by improved delinquency trends and a reduction in the allowance for loan losses as a result of lower estimated losses. The consumer, excluding credit card, provision was also down from both prior-year periods, reflecting improving delinquency and charge-off trends in 2011 across most portfolios and the absence of additions to the allowance for loan losses. The wholesale provision

reflected a lower benefit for both the second quarter and first six months of 2011 compared with the prior-year periods. For a more detailed discussion of the loan portfolio and the allowance for credit losses, see the segment discussions for RFS on pages 23–32, CS on pages 33–35, IB on pages 19–22 and CB on pages 36–38, and the Allowance for credit losses section on pages 86–88 of this Form 10-Q.

Noninterest expense (in millions)	Three months ended June 30,			Six months ended June 30,			
	2011	2010	Change	2011	2010	Change	
Compensation expense ^(a)	\$7,569	\$7,616	(1)%	\$15,832	\$14,892	6	%
Noncompensation expense:							
Occupancy	935	883	6	1,913	1,752	9	
Technology, communications and equipment	1,217	1,165	4	2,417	2,302	5	
Professional and outside services	1,866	1,685	11	3,601	3,260	10	
Marketing	744	628	18	1,403	1,211	16	
Other ^{(b)(c)}	4,299	2,419	78	7,242	6,860	6	
Amortization of intangibles	212	235	(10)	429	478	(10)	
Total noncompensation expense	9,273	7,015	32	17,005	15,863	7	
Total noninterest expense	\$16,842	\$14,631	15 %	\$32,837	\$30,755	7	%

The three and six months ended June 30, 2010, included a payroll tax expense related to the United Kingdom (a) (“U.K.”) Bank Payroll Tax on certain compensation awarded from December 9, 2009, to April 5, 2010, to relevant banking employees.

Included litigation expense of \$1.9 billion and \$3.0 billion for the three and six months ended June 30, 2011, (b) respectively, compared with \$792 million and \$3.7 billion for the three and six months ended June 30, 2010, respectively.

Included foreclosed property expense of \$174 million and \$384 million for the three and six months ended June 30, (c) 2011, respectively, compared with \$244 million and \$547 million for the three and six months ended June 30, 2010, respectively.

Total noninterest expense for the second quarter of 2011 was \$16.8 billion, an increase of \$2.2 billion, or 15%, compared with the second quarter of 2010. Total noninterest expense for the first six months of 2011 was \$32.8 billion, up by \$2.1 billion, or 7%, compared with the first six months of 2010. The increases in both periods of comparison were due to higher noncompensation expense, which included elevated levels of litigation expense related to mortgage-related matters and an increase in other expense for foreclosure-related matters. Higher compensation expense also contributed to the increase in noninterest expense for the first half of 2011.

Compensation expense decreased slightly from the second quarter of 2010, as the prior-year results included the impact of the U.K. Bank Payroll Tax in IB. Compensation expense increased from the first six months of 2010, due to higher salary and benefits expense in IB, as well as additions to the sales force and employees engaged in default-related matters associated with the serviced portfolio in RFS, and front office staff in AM; these increases were partially offset by the aforementioned payroll tax in IB in 2010.

The increase in noncompensation expense in the second quarter of 2011 was due to higher litigation expense, which included an addition of \$1.3 billion to litigation reserves in Corporate predominantly for mortgage-related matters; and a \$1.0 billion expense for estimated litigation and other costs of foreclosure-related matters in RFS.

Noncompensation expense for the first six months of 2011 was also affected by these items, together with an additional \$650 million expense for estimated litigation and other costs of foreclosure-related matters in RFS in the first quarter of 2011. Litigation expense in the first half of 2011 decreased from the prior year, as the aforementioned charges for mortgage-related matters were lower than those incurred in 2010. For a further discussion of litigation expense, see the Litigation reserve discussion in Note 23 on pages 172–179 of this Form 10-Q.

In addition to the items mentioned above, the following items in noncompensation expense were higher in the second quarter and first six months of 2011: professional services expense, due to Consent Orders and foreclosure-related matters in RFS and continued investments in new product platforms in the businesses; marketing expense in CS; and all other expense, reflecting higher FDIC assessments in 2011 and additional operating expense related to business activities in IB. For a discussion of amortization of intangibles, refer to the Balance Sheet Analysis on pages 49–51, and Note 16 on pages 159–163 of this Form 10-Q.

Edgar Filing: J P MORGAN CHASE & CO - Form 10-Q

Income tax expense (in millions, except rate)	Three months ended June 30,		Six months ended June 30,		
	2011	2010	2011	2010	
Income before income tax expense	\$8,127	\$7,107	\$16,184	\$11,644	
Income tax expense	2,696	2,312	5,198	3,523	
Effective tax rate	33.2	% 32.5	% 32.1	% 30.3	%

The increase in the effective tax rate during the three and six months ended June 30, 2011, compared with the prior-year periods was primarily the result of higher reported pretax income and changes in the mix of income subject to U.S. federal, state and local taxes, as well as lower tax benefits recognized upon the resolution of tax audits. These factors were partially offset by deferred tax benefits associated with state and local income taxes. For additional information on income taxes, see Critical Accounting Estimates Used by the Firm on pages 92–95 of this Form 10-Q.

EXPLANATION AND RECONCILIATION OF THE FIRM'S USE OF NON-GAAP FINANCIAL MEASURES

The Firm prepares its consolidated financial statements using accounting principles generally accepted in the U.S. ("U.S. GAAP"); these financial statements appear on pages 98–101 of this Form 10-Q. That presentation, which is referred to as "reported" basis, provides the reader with an understanding of the Firm's results that can be tracked consistently from year to year and enables a comparison of the Firm's performance with other companies' U.S. GAAP financial statements.

In addition to analyzing the Firm's results on a reported basis, management reviews the Firm's results and the results of the lines of business on a "managed" basis, which is a non-GAAP financial measure. The Firm's definition of managed basis starts with the reported U.S. GAAP results and includes certain reclassifications to present total net revenue for the Firm (and each of the business segments) on a FTE basis. Accordingly, revenue from tax-exempt securities and investments that receive tax credits is presented in the managed results on a basis comparable to taxable securities and investments. This non-GAAP financial measure allows management to assess the comparability of revenue arising from both taxable and tax-exempt sources. The corresponding income tax impact related to tax-exempt items is recorded within income tax expense. These adjustments have no impact on net income as reported by the Firm as a whole or by the lines of business.

Tangible common equity ("TCE"), a non-GAAP financial measure, represents common stockholders' equity (i.e., total stockholders' equity less preferred stock) less goodwill and identifiable intangible assets (other than MSRs), net of related deferred tax liabilities. ROTCE, a non-GAAP financial ratio, measures the Firm's earnings as a percentage of TCE. In management's view, these measures are meaningful to the Firm, as well as analysts and investors, in assessing the Firm's use of equity and in facilitating comparisons with competitors.

Management also uses certain non-GAAP financial measures at the business-segment level, because it believes these other non-GAAP financial measures provide information to investors about the underlying operational performance and trends of the particular business segment and, therefore, facilitate a comparison of the business segment with the performance of its competitors. Non-GAAP financial measures used by the Firm may not be comparable to similarly named non-GAAP financial measures used by other companies.

The following summary table provides a reconciliation from the Firm's reported U.S. GAAP results to managed basis.

^(a) Represents deferred tax liabilities related to tax-deductible goodwill and to identifiable intangibles created in nontaxable transactions, which are netted against goodwill and other intangibles when calculating TCE.

Other financial measures

The Firm also discloses the allowance for loan losses to total retained loans, excluding home lending PCI loans. For a further discussion of this credit metric, see Allowance for credit losses on pages 86–88 of this Form 10-Q.

BUSINESS SEGMENT RESULTS

The Firm is managed on a line of business basis. The business segment financial results presented reflect the current organization of JPMorgan Chase. There are six major reportable business segments: the Investment Bank, Retail Financial Services, Card Services, Commercial Banking, Treasury & Securities Services and Asset Management, as well as a Corporate/Private Equity segment. The business segments are determined based on the products and services provided, or the type of customer served, and reflect the manner in which financial information is currently evaluated by management. Results of these lines of business are presented on a managed basis.

Description of business segment reporting methodology

Results of the business segments are intended to reflect each segment as if it were essentially a stand-alone business. The management reporting process that derives business segment results allocates income and expense using market-based methodologies. For a further discussion of those methodologies, see Business Segment Results – Description of business segment reporting methodology on pages 67–68 of JPMorgan Chase’s 2010 Annual Report. The Firm continues to assess the assumptions, methodologies and reporting classifications used for segment reporting, and further refinements may be implemented in future periods.

Business segment capital allocation changes

Each business segment is allocated capital by taking into consideration stand-alone peer comparisons, economic risk measures and regulatory capital requirements. The amount of capital assigned to each business is referred to as equity. Effective January 1, 2011, capital allocated to CS was reduced and that of TSS was increased. For further information about these capital changes, see Line of business equity on pages 60–61 of this Form 10-Q.

Segment Results – Managed Basis^(a)

(a) Represents reported results on a tax-equivalent basis.

Corporate/Private Equity includes an adjustment to offset IB's inclusion of a credit allocation income/(expense) to

(b) TSS in total net revenue; TSS reports the credit allocation as a separate line on its income statement (not within total net revenue).

INVESTMENT BANK

For a discussion of the business profile of IB, see pages 69–71 of JPMorgan Chase’s 2010 Annual Report and Introduction on page 4 of this Form 10-Q.

IB manages traditional credit exposures related to Global Corporate Bank (“GCB”) on behalf of IB and TSS.

(a) Effective January 1, 2011, IB and TSS share the economics related to the Firm’s GCB clients. IB recognizes this sharing agreement within all other income. The prior-year period reflected the reimbursement from TSS for a portion of the total costs of managing the credit portfolio on behalf of TSS.

Total net revenue included tax-equivalent adjustments, predominantly due to income tax credits related to affordable housing and alternative energy investments as well as tax-exempt income from municipal bond investments of \$493 million and \$401 million for the three months ended June 30, 2011 and 2010, and \$931 million and \$804 million for the six months ended June 30, 2011 and 2010, respectively.

- The compensation expense as a percentage of total net revenue ratio for the second quarter of 2010 and year-to-date of 2010 excluding the payroll tax expense related to the U.K. Bank Payroll Tax on certain
- (c) compensation awarded from December 9, 2009, to April 5, 2010, to relevant banking employees, which is a non-GAAP financial measure, was 37% and 36%, respectively. IB excludes this tax from the ratio because it enables comparability between periods.
 - (d) Fixed income markets primarily include revenue related to market-making across global fixed income markets, including foreign exchange, interest rate, credit and commodities markets.
 - (e) Equities markets primarily include revenue related to market-making across global equity products, including cash instruments, derivatives, convertibles and Prime Services.
 - (f) Credit portfolio revenue includes net interest income, fees and loan sale activity, as well as gains or losses on securities received as part of a loan restructuring, for IB's credit portfolio. Credit portfolio revenue also includes the results of risk management related to the Firm's lending and derivative activities. See pages 67–88 of the Credit Risk Management section of this Form 10-Q for further discussion.

Quarterly results

Net income was \$2.1 billion, up 49% from the prior year, reflecting higher net revenue and lower noninterest expense, partially offset by a lower benefit from the provision for credit losses.

Net revenue was \$7.3 billion, compared with \$6.3 billion in the prior year. Investment banking fees were up 37% to \$1.9 billion, consisting of debt underwriting fees of \$866 million (up 24%), equity underwriting fees of \$455 million (up 29%), and advisory fees of \$601 million (up 69%). Fixed Income and Equity Markets revenue was \$5.5 billion, compared with \$4.6 billion in the prior year, reflecting solid client revenue. Credit Portfolio revenue was a loss of \$111 million, primarily reflecting the negative net impact of credit-related valuation adjustments, largely offset by net interest income and fees on retained loans.

The provision for credit losses was a benefit of \$183 million, compared with a benefit of \$325 million in the prior year. The current-quarter benefit primarily reflected a reduction in the allowance for loan losses, largely due to net repayments. The ratio of the allowance for loan losses to end-of-period loans retained was 2.10%, compared with 3.98% in the prior year, driven by the improved quality of the loan portfolio. Net charge-offs were \$7 million, compared with net charge-offs of \$28 million in the prior year.

Noninterest expense was \$4.3 billion, down 4% from the prior year. The decrease was driven by lower compensation expense. The prior-year results included the impact of the U.K. Bank Payroll Tax.

Return on equity was 21% on \$40.0 billion of average allocated capital.

Year-to-date results

Net income was \$4.4 billion, up 15% from the prior year, primarily reflecting higher net revenue, partially offset by a lower benefit from the provision for credit losses.

Net revenue was \$15.5 billion, compared with \$14.7 billion in the prior year. Investment banking fees were a record, up 30% to \$3.7 billion, consisting of record debt underwriting fees of \$1.8 billion (up 29%), advisory fees of \$1.0 billion (up 56%), and equity underwriting fees of \$834 million (up 9%). Fixed Income and Equity Markets revenue was \$12.1 billion, compared with \$11.5 billion in the prior year, reflecting solid client revenue. Credit Portfolio revenue was a loss of \$301 million, primarily reflecting the negative net impact of credit-related valuation adjustments, largely offset by net interest income and fees on retained loans.

The provision for credit losses was a benefit of \$612 million, compared with a benefit of \$787 million in the prior year. The current-year benefit primarily reflected a reduction in the allowance for loan losses, largely as a result of net repayments and loan sales. Net charge-offs were \$130 million, compared with net charge-offs of \$725 million in the prior year.

Noninterest expense was \$9.3 billion, approximately flat from the prior year. Compensation expense was flat to the prior year, as higher salaries & benefits and performance-based compensation expense was predominantly offset by the absence of the U.K. Bank Payroll Tax in the current period. Noncompensation expense was also approximately flat to the prior year.

Return on equity was 22% on \$40.0 billion of average allocated capital.

(a) Loans retained included credit portfolio loans, leveraged leases and other accrual loans, and excluded loans held-for-sale and loans at fair value.

Adjusted assets, a non-GAAP financial measure, equals total assets minus: (1) securities purchased under resale agreements and securities borrowed less securities sold, not yet purchased; (2) assets of consolidated variable interest entities (“VIEs”); (3) cash and securities segregated and on deposit for regulatory and other purposes; (4) goodwill and intangibles; and (5) securities received as collateral. The amount of adjusted assets is presented to assist the reader in comparing IB’s asset and capital levels to other investment banks in the securities industry.

(b) Asset-to-equity leverage ratios are commonly used as one measure to assess a company's capital adequacy. IB believes an adjusted asset amount that excludes the assets discussed above, which were considered to have a low risk profile, provides a more meaningful measure of balance sheet leverage in the securities industry.

(c) Allowance for loan losses of \$377 million and \$617 million were held against these nonaccrual loans at June 30, 2011 and 2010, respectively.

(d) Loans held-for-sale and loans at fair value were excluded when calculating the allowance coverage ratio and net charge-off rate.

Average value-at-risk (“VaR”) was less than the sum of the VaR of the components described above, which is due to (e) portfolio diversification. The diversification effect reflects the fact that the risks were not perfectly correlated. The risk of a portfolio of positions is therefore usually less than the sum of the risks of the positions themselves.

Trading VaR includes substantially all trading activities in IB, including the credit spread sensitivities of certain mortgage products and syndicated lending facilities that the Firm intends to distribute; however, particular risk parameters of certain products are not fully captured, for example, correlation risk. Trading VaR does not include (f) the debit valuation adjustments (“DVA”) taken on derivative and structured liabilities to reflect the credit quality of the Firm. See VaR discussion on pages 88-91 and the DVA sensitivity table on page 91 of this Form 10-Q for further details.

Credit portfolio VaR includes the derivative credit valuation adjustments (“CVA”), hedges of the CVA and (g) mark-to-market (“MTM”) hedges of the retained loan portfolio, which are all reported in principal transactions revenue. This VaR does not include the retained loan portfolio, which is not MTM.

According to Dealogic, for the first six months of 2011, the Firm was ranked #1 in Global Investment Banking fees generated based on revenue, and #1 in Global Syndicated Loans; #1 in Global Debt, Equity and Equity-related; and #2 in Global Announced M&A; #2 in Global Long-Term Debt; and #3 in Global Equity and Equity-related, based on volume.

(a) Source: Dealogic. Global Investment Banking fees reflects ranking of fees and market share. Remainder of rankings reflects transaction volume rank and market share.

(b) Global Investment Banking fees exclude money market, short-term debt and shelf deals.

Long-term debt tables include investment-grade, high-yield, supranationals, sovereigns, agencies, covered bonds, (c) asset-backed securities (“ABS”) and mortgage-backed securities; and exclude money market, short-term debt, and U.S. municipal securities.

(d) Equity and equity-related rankings include rights offerings and Chinese A-Shares.

Global announced M&A is based on transaction value at announcement; all other rankings are based on transaction proceeds, with full credit to each book manager/equal if joint. Because of joint assignments, market share of all (e) participants will add up to more than 100%. M&A for year-to-date 2011 and full-year 2010 reflects the removal of any withdrawn transactions. U.S. announced M&A represents any U.S. involvement ranking.

Financial ratios							
Return on common equity	8	% 15	%	3	% 7	%	
Overhead ratio	71	55		76	55		
Overhead ratio excluding core deposit intangibles ^(b)	70	54		76	54		

Total net revenue included tax-equivalent adjustments associated with tax-exempt loans to municipalities and other (a)qualified entities of \$2 million and \$5 million for the three months ended June 30, 2011 and 2010, respectively, and \$5 million and \$10 million for the six months ended June 30, 2011 and 2010, respectively.

RFS uses the overhead ratio (excluding the amortization of core deposit intangibles (“CDI”)), a non-GAAP financial measure, to evaluate the underlying expense trends of the business. Including CDI amortization expense in the overhead ratio calculation would result in a higher overhead ratio in the earlier years and a lower overhead ratio in (b)later years; this method would therefore result in an improving overhead ratio over time, all things remaining equal. The non-GAAP ratio excluded Retail Banking’s CDI amortization expense related to prior business combination transactions of \$60 million and \$69 million for the three months ended June 30, 2011 and 2010, respectively, and \$120 million and \$139 million for the six months ended June 30, 2011 and 2010, respectively.

Quarterly results

Retail Financial Services reported net income of \$582 million, compared with \$1.0 billion in the prior year. Net revenue was \$8.0 billion, an increase of \$167 million, or 2%, compared with the prior year. Net interest income was \$4.6 billion, down by \$246 million, or 5%, reflecting the impact of lower loan balances due to portfolio runoff, largely offset by an increase in deposit balances. Noninterest revenue was \$3.4 billion, up by \$413 million, or 14%, driven by higher mortgage fees and related income, debit card income, deposit-related fees and investment sales revenue.

The provision for credit losses was \$1.1 billion, a decrease of \$587 million from the prior year. While delinquency trends and net charge-offs have improved compared with the prior year, the current-quarter provision continued to reflect elevated losses in the mortgage and home equity portfolios. See Consumer credit portfolio on page 78 of this Form 10-Q for the net charge-off amounts and rates. To date, no charge-offs have been recorded on PCI loans. Noninterest expense was \$5.6 billion, an increase of \$1.4 billion, or 32%, from the prior year driven by elevated foreclosure and default-related costs including \$1.0 billion for estimated litigation and other costs of foreclosure-related matters.

Year-to-date results

Retail Financial Services reported net income of \$374 million, compared with \$911 million in the prior year. Net revenue was \$14.3 billion, a decrease of \$1.3 billion, or 9%, compared with the prior year. Net interest income was \$9.2 billion, down by \$640 million, or 7%, reflecting the impact of lower loan balances due to portfolio runoff and narrower loan spreads. Noninterest revenue was \$5.1 billion, down by \$694 million, or 12%, driven by lower mortgage fees and related income, partially offset by higher debit card income and investment sales revenue.

The provision for credit losses was \$2.5 billion, a decrease of \$3.0 billion from the prior year. While delinquency trends and net charge-offs improved compared with the prior year, the current-year provision continued to reflect elevated losses in the mortgage and home equity portfolios. Additionally, the prior year provision included an addition to the allowance for loan losses of \$1.2 billion for the purchased credit-impaired portfolio. See Consumer credit portfolio on page 78 of this Form 10-Q for the net charge-off amounts and rates. To date, no charge-offs have been recorded on PCI loans.

Noninterest expense was \$10.9 billion, an increase of \$2.4 billion, or 28%, from the prior year driven by elevated foreclosure and default-related costs including \$1.7 billion for estimated litigation and other costs of foreclosure-related matters.

Loans at fair value consist of prime mortgages originated with the intent to sell that are accounted for at fair value and classified as trading assets on the Consolidated Balance Sheets. These loans totaled \$13.3 billion and \$12.2 billion at June 30, 2011 and 2010, respectively. Average balances of these loans totaled \$14.5 billion and \$12.5 billion for the three months ended June 30, 2011 and 2010, respectively, and \$16.0 billion and \$13.3 billion for the six months ended June 30, 2011 and 2010, respectively.

Excludes PCI loans that were acquired as part of the Washington Mutual transaction, which are accounted for on a pool basis. Since each pool is accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows, the past-due status of the pools, or that of the individual loans within the pools, is not meaningful. Because the Firm is recognizing interest income on each pool of loans, they are all considered to be performing.

(c) Certain of these loans are classified as trading assets on the Consolidated Balance Sheets.

At June 30, 2011 and 2010, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of \$9.1 billion and \$8.9 billion, respectively, that are 90 or more days past due; (2) real estate owned insured by U.S. government agencies of \$2.4 billion and \$1.4 billion, respectively; and (3) student loans insured by U.S. government agencies under the Federal Family Education Loan Program ("FFELP"), of \$558 million and \$447 million, respectively, that are 90 or more days past due. These amounts were excluded as reimbursement of insured amounts is proceeding normally. For further

discussion, see Note 13 on pages 134–148 of this Form 10-Q which summarizes loan delinquency information.

(e) Loans held-for-sale and loans accounted for at fair value were excluded when calculating the allowance coverage ratio and the net charge-off rate.

Excludes the impact of PCI loans that were acquired as part of the Washington Mutual transaction. These loans were accounted for at fair value on the acquisition date, which incorporated management's estimate, as of that date, (f) of credit losses over the remaining life of the portfolio. An allowance for loan losses of \$4.9 billion and \$2.8 billion was recorded for these loans at June 30, 2011 and 2010, respectively, which was also excluded from the applicable ratios. To date, no charge-offs have been recorded for these loans.

RETAIL BANKING

Overhead ratio	59 %	60 %		61 %	60 %	
Overhead ratio excluding core deposit intangibles ^(a)	58	58		60	58	

Retail Banking uses the overhead ratio (excluding the amortization of CDI), a non-GAAP financial measure, to evaluate the underlying expense trends of the business. Including CDI amortization expense in the overhead ratio calculation would result in a higher overhead ratio in the earlier years and a lower overhead ratio in later years; this (a) method would therefore result in an improving overhead ratio over time, all things remaining equal. The non-GAAP ratio excluded Retail Banking's CDI amortization expense related to prior business combination transactions of \$60 million and \$69 million for the three months ended June 30, 2011 and 2010, respectively, and \$120 million and \$139 million for the six months ended June 30, 2011 and 2010, respectively.

Quarterly results

Retail Banking reported net income of \$1.1 billion, an increase of \$188 million, or 21%, compared with the prior year. Net revenue was \$4.6 billion, up 5% from the prior year. Net interest income was \$2.7 billion, flat to the prior year, as the impact from higher deposit balances was offset predominantly by the effect of lower deposit spreads. Noninterest revenue was \$1.9 billion, an increase of 12%, driven by higher debit card revenue, deposit-related fees and investment sales revenue. The provision for credit losses was \$42 million, compared with \$168 million in the prior year. Net charge-offs were \$117 million, compared with \$168 million in the prior year. Noninterest expense was \$2.7 billion, up 3% from the prior year, due to sales force increases and new branch builds.

Year-to-date results

Retail Banking reported net income of \$2.0 billion, an increase of \$181 million, or 10%, compared with the prior year. Net revenue was \$9.0 billion, up 3% from the prior year. Net interest income was \$5.4 billion, flat to the prior year, as the impact from higher deposit balances was offset predominantly by the effect of lower deposit spreads. Noninterest revenue was \$3.6 billion, an increase of 8%, driven by higher debit card and investment sales revenue. The provision for credit losses was \$161 million, compared with \$359 million in the prior year. Net charge-offs were \$236 million, compared with \$359 million in the prior year. Noninterest expense was \$5.5 billion, up 6% from the prior year, resulting from sales force increases and new branch builds.

Quarterly results

Mortgage Banking, Auto & Other Consumer Lending reported a net loss of \$454 million, compared with net income of \$364 million in the prior year.

Net revenue was \$2.2 billion, an increase of \$117 million, or 6%, from the prior year. Mortgage Banking net revenue was \$1.3 billion, compared with net revenue of \$1.2 billion in the prior year. Auto & Other Consumer Lending net revenue was \$835 million, down by \$15 million.

Mortgage Banking net revenue in the second quarter of 2011 included \$1.1 billion for mortgage fees and related income, \$124 million of net interest income and \$106 million of other noninterest revenue. Mortgage fees and related income comprised \$544 million of net production revenue, \$533 million of servicing operating revenue and \$23 million of MSR risk management revenue. Production revenue, excluding repurchase losses, was \$767 million, an increase of \$91 million, reflecting wider margins. Total production revenue was reduced by \$223 million of repurchase losses, compared with repurchase losses of \$667 million in the prior year. Servicing operating revenue declined 6% from the prior year, due to run-off of the servicing portfolio. MSR risk management revenue declined by \$288 million from the prior year.

The provision for credit losses, predominantly related to the student and auto loan portfolios, was \$132 million, compared with \$175 million in the prior year. Auto loan net charge-offs were \$19 million, compared with \$58 million in the prior year. Student loan and other net charge-offs were \$135 million, compared with \$150 million in the prior year.

Noninterest expense was \$2.6 billion, up by \$1.3 billion from the prior year. The increase was driven by \$1.0 billion for estimated litigation and other costs of foreclosure-related matters, as well as an increase in default-related expense for the serviced portfolio.

Year-to-date results

Mortgage Banking, Auto & Other Consumer Lending reported a net loss of \$1.4 billion, compared with net income of \$621 million in the prior year.

Net revenue was \$2.9 billion, a decrease of \$1.1 billion, or 28%, from the prior year. Mortgage Banking net revenue was \$1.3 billion, compared with net revenue of \$2.2 billion in the prior year. Auto & Other Consumer Lending net revenue was \$1.6 billion, down by \$154 million, predominantly as a result of the discontinuation of tax refund anticipation lending.

Mortgage Banking net revenue in the first half of 2011 included \$611 million of mortgage fees and related income, \$395 million of net interest income and \$210 million of other noninterest revenue. Mortgage fees and related income comprised \$803 million of net production revenue, \$1.0 billion of servicing operating revenue and a \$1.2 billion MSR risk management loss. Production revenue, excluding repurchase losses, was \$1.4 billion, an increase of \$337 million, reflecting higher mortgage origination volumes and wider margins. Total production revenue was reduced by \$643 million of repurchase losses, compared with repurchase losses of \$1.1 billion in the prior year. Servicing operating

revenue declined 4% from the prior year. MSR risk management revenue declined by \$1.7 billion from the prior year, reflecting a \$1.1 billion decline in the fair value of the MSR asset that was recognized in the first quarter of 2011 related to a revised cost to service assumption incorporated into the valuation to reflect the estimated impact of higher servicing costs to enhance servicing processes – particularly loan modification and foreclosure procedures, and higher estimated costs to comply with Consent Orders entered into with banking regulators. The decline in the fair value of the MSR asset also resulted from a decrease in interest rates.

The provision for credit losses, predominantly related to the student and auto loan portfolios, was \$263 million, compared with \$392 million in the prior year. Auto loan net charge-offs were \$66 million, compared with \$160 million in the prior year. Student loan and other net charge-offs were \$215 million, compared with \$214 million in the prior year.

Noninterest expense was \$4.7 billion, up by \$2.2 billion, or 87%, from the prior year, driven by \$1.7 billion recorded for estimated litigation and other costs of foreclosure-related matters, as well as an increase in default-related expense for the serviced portfolio.

Predominantly represents prime loans repurchased from Government National Mortgage Association (“Ginnie Mae”) (a) pools, which are insured by U.S. government agencies. See further discussion of loans repurchased from Ginnie Mae pools in Mortgage repurchase liability on pages 53–56 of this Form 10-Q.

Total average loans owned included loans held-for-sale of \$76 million and \$1.9 billion for the three months ended (b) June 30, 2011 and 2010, respectively, and \$104 million and \$2.4 billion for the six months ended June 30, 2011 and 2010, respectively. These amounts were excluded when calculating the net charge-off rate.

At June 30, 2011 and 2010, total end-of-period loans owned included loans held-for-sale of \$221 million and \$434 (c) million, respectively. These amounts were excluded when calculating the 30+ day delinquency rate.

At June 30, 2011 and 2010, excluded mortgage loans insured by U.S. government agencies of \$10.1 billion and (d) \$9.8 billion, respectively. These amounts were excluded as reimbursement of insured amounts is proceeding normally.

At June 30, 2011 and 2010, excluded loans that are 30 days or more past due and still accruing, which are insured (e) by U.S. government agencies under the FFELP, of \$968 million and \$988 million, respectively. These amounts were excluded as reimbursement of insured amounts is proceeding normally.

At June 30, 2011 and 2010, nonperforming assets excluded: (1) mortgage loans insured by U.S. government (f) agencies of \$9.1 billion and \$8.9 billion, respectively, that are 90 or more days past due; (2) real estate owned insured by U.S. government agencies of \$2.4 billion and \$1.4 billion, respectively; and (3) student loans insured by U.S. government agencies under the FFELP, of \$558 million and \$447 million, respectively, that are 90 days or more past due. These amounts were excluded as reimbursement of insured amounts is proceeding normally.

(g) Includes rural housing loans sourced through brokers and correspondents, which are underwritten under Rural Housing Authority guidelines.

Loans at fair value consist of prime mortgages originated with the intent to sell that are accounted for at fair value (h) and classified as trading assets on the Consolidated Balance Sheets. Average balances of these loans totaled \$14.5 billion and \$12.5 billion for the three months ended June 30, 2011 and 2010, respectively, and \$16.0 billion and \$13.3 billion for the six months ended June 30, 2011 and 2010, respectively.

(i) Represents the ratio of MSR net carrying value (ending) to third-party mortgage loans serviced (ending) divided by the ratio of annualized loan servicing revenue to third-party mortgage loans serviced (average).

(j)

Of the total decrease recognized in the six months ended June 30, 2011, \$1.1 billion related to a revised cost to service assumption incorporated into the valuation in the first quarter of 2011 to reflect the estimated impact of higher servicing costs to enhance servicing processes, particularly related to loan modification and foreclosure procedures, and higher estimated costs to comply with Consent Orders entered into with banking regulators. The \$1.7 billion change due to changes in inputs and assumptions also included a decrease in the fair value of the MSR asset resulting from a decrease in interest rates. Declining interest rates have the effect of decreasing the fair value of the MSR asset and increasing the fair value of the derivatives used for risk management purposes. For additional information on MSRs, see Note 3 and Note 16 on pages 102–114 and 159–163, respectively, of this Form 10-Q.

REAL ESTATE PORTFOLIOS

Selected income statement data (in millions, except ratios)	Three months ended June 30,			Six months ended June 30,		
	2011	2010	Change	2011	2010	Change

Overhead ratio	30 %	30 %		30 %	28 %	

Quarterly results

Real Estate Portfolios reported a net loss of \$66 million, compared with a net loss of \$236 million in the prior year. The improvement was driven by a lower provision for credit losses, partially offset by lower net revenue.

Net revenue was \$1.2 billion, down by \$148 million, or 11%, from the prior year. The decrease was driven by a decline in net interest income as a result of lower loan balances due to portfolio runoff, partially offset by wider loan spreads.

The provision for credit losses was \$954 million, compared with \$1.4 billion in the prior year. The current-quarter provision reflected a \$418 million reduction in net charge-offs, driven by a modest improvement in delinquency trends.

Noninterest expense was \$371 million, down by \$34 million, or 8%, from the prior year, reflecting a decrease in foreclosed asset expense.

Year-to-date results

Real Estate Portfolios reported a net loss of \$228 million, compared with a net loss of \$1.5 billion in the prior year. The improvement was driven by a lower provision for credit losses, partially offset by lower net revenue.

Net revenue was \$2.4 billion, down by \$512 million, or 18%, from the prior year. The decrease was driven by a decline in net interest income as a result of lower loan balances due to portfolio runoff and narrower loan spreads.

The provision for credit losses was \$2.0 billion, compared with \$4.7 billion in the prior year. The current-year provision reflected a \$1.4 billion reduction in net charge-offs driven by improved delinquency trends. Also, the prior-year provision included an addition to the allowance for loan losses of \$1.2 billion for the Washington Mutual PCI portfolios.

Noninterest expense was \$726 million, down by \$98 million, or 12%, from the prior year, reflecting a decrease in foreclosed asset expense.

PCI loans represent loans acquired in the Washington Mutual transaction for which a deterioration in credit quality occurred between the origination date and JPMorgan Chase's acquisition date. These loans were initially recorded at fair value and accrete interest income over the estimated lives of the loans as long as cash flows are reasonably estimable, even if the underlying loans are contractually past due.

Included within Real Estate Portfolios are PCI loans that the Firm acquired in the Washington Mutual transaction. For PCI loans, the excess of the undiscounted gross cash flows expected to be collected over the carrying value of the

loans (the “accretable yield”) is accreted into interest income at a level rate of return over the expected life of the loans. The net spread between the PCI loans and the related liabilities are expected to be relatively constant over time, except for any basis risk or other residual interest rate risk that remains and for certain changes in the accretable yield percentage (e.g., from extended loan liquidation periods and from prepayments). As of June 30, 2011, the remaining weighted-average life of the PCI loan portfolio is expected to be 6.9 years. For further information, see Note 13, PCI loans, on pages 145–146 of this Form 10-Q. The loan balances are expected to decline more rapidly in the earlier years as the most troubled loans are liquidated, and more slowly thereafter as the remaining troubled borrowers have limited refinancing opportunities. Similarly, default and servicing expense are expected to be higher in the earlier years and decline over time as liquidations slow down.

To date the impact of the PCI loans on Real Estate Portfolios’ net income has been modestly negative. This is due to the current net spread of the portfolio, the provision for loan losses recognized subsequent to its acquisition, and the higher level of default and servicing expense associated with the portfolio. Over time, the Firm expects that this portfolio will contribute positively to net income.

Allowance for loan losses to ending loans retained excluding PCI loans ^(a)	6.90	7.01		6.90	7.01	

Excludes the impact of PCI loans that were acquired as part of the Washington Mutual transaction. These loans were accounted for at fair value on the acquisition date, which incorporated management's estimate, as of that date, (a) of credit losses over the remaining life of the portfolio. An allowance for loan losses of \$4.9 billion and \$2.8 billion was recorded for these loans at June 30, 2011 and 2010, respectively, which was also excluded from the applicable ratios. To date, no charge-offs have been recorded for these loans.

(b) At June 30, 2011 and 2010, the delinquency rate for PCI loans was 26.20% and 27.91%, respectively.

Excludes PCI loans that were acquired as part of the Washington Mutual transaction, which are accounted for on a pool basis. Since each pool is accounted for as a single asset with a single composite interest rate and an aggregate (c) expectation of cash flows, the past-due status of the pools, or that of the individual loans within the pools, is not meaningful. Because the Firm is recognizing interest income on each pool of loans, they are all considered to be performing.

CARD SERVICES

For a discussion of the business profile of CS, see pages 79–81 of JPMorgan Chase's 2010 Annual Report and Introduction on page 4 of this Form 10-Q.

Effective January 1, 2011, the commercial card business that was previously in TSS was transferred to CS. There is (a) no material impact on the financial data; prior-year periods were not revised. The commercial card portfolio is excluded from business metrics and supplemental information where noted.

(b) Includes the impact of revenue sharing agreements with other JPMorgan Chase business segments.

(c) Includes Commercial Card noninterest revenue of \$75 million and \$147 million for the three and six months ended June 30, 2011, respectively.

(d) Includes Commercial Card noninterest expense of \$69 million and \$144 million for the three and six months ended June 30, 2011, respectively.

Quarterly results

Net income was \$911 million, compared with \$343 million in the prior year. The improved results were driven by a lower provision for credit losses, partially offset by lower net revenue.

End-of-period loans were \$125.5 billion, a decrease of \$17.5 billion, or 12%, from the prior year. Average loans were \$125.0 billion, a decrease of \$21.3 billion, or 15%, from the prior year. The declines in both end-of-period and average loans were consistent with expectations. The end-of-period and average loan totals also reflected the impact of the Firm's sale of the \$3.7 billion Kohl's portfolio on April 1, 2011.

Net revenue was \$3.9 billion, a decrease of \$290 million, or 7%, from the prior year. Net interest income was \$2.9 billion, down by \$445 million, or 13%. The decrease in net interest income was driven by lower average loan balances (including the impact of the Kohl's portfolio sale), the impact of legislative changes and a decreased level of fees. These decreases were largely offset by lower revenue reversals associated with lower charge-offs. Noninterest revenue was \$1.0 billion, an increase of \$155 million, or 18%, from the prior year. The increase was driven by lower partner revenue-sharing due to the impact of the Kohl's portfolio sale, higher net interchange income and the transfer of the Commercial Card business to CS from TSS in the first quarter of 2011. Excluding the impact of the Commercial Card business, noninterest revenue increased 9%.

The provision for credit losses was \$810 million, compared with \$2.2 billion in the prior year. The current-quarter provision reflected lower net charge-offs and a reduction of \$1.0 billion to the allowance for loan losses due to lower estimated losses. The prior-year provision included a reduction of \$1.5 billion to the allowance for loan losses. The net charge-off rate was 5.82% (5.81% including loans held-for-sale), down from 10.20% in the prior year. The 30+ day delinquency rate was 2.98%, down from 4.96% in the prior year. Excluding the Washington Mutual and Commercial Card portfolios, the net charge-off rate¹ was 5.28%, down from 9.02% in the prior year; and the 30+ day delinquency rate was 2.73%, down from 4.48% in the prior year.

Noninterest expense was \$1.6 billion, an increase of \$186 million, or 13%, from the prior year, due to higher marketing expense and the inclusion of the Commercial Card business. Excluding the impact of the Commercial Card business, noninterest expense increased 8%.

Year-to-date results

Net income was \$2.3 billion, compared with \$40 million in the prior year. The improved results were driven by a lower provision for credit losses, partially offset by lower net revenue.

Average loans were \$128.8 billion, a decrease of \$22.3 billion, or 15%, from the prior year. The decline in average loans was consistent with expectations and also reflected the impact of the Firm's sale of the \$3.7 billion Kohl's portfolio on April 1, 2011.

Net revenue was \$7.9 billion, a decrease of \$755 million, or 9%, from the prior year. Net interest income was \$6.1 billion, down by \$934 million, or 13%. The decrease in net interest income was driven by lower average loan balances (including the impact of the Kohl's portfolio sale), the impact of legislative changes and a decreased level of fees. These decreases were largely offset by lower revenue reversals associated with lower charge-offs. Noninterest revenue was \$1.8 billion, an increase of \$179 million, or 11%, from the prior year. The increase was driven by the transfer of the Commercial Card business to CS from TSS in the first quarter of 2011 and higher net interchange income, partially offset by lower revenue from fee-based products. Excluding the impact of the Commercial Card business, noninterest revenue increased 2%.

The provision for credit losses was \$1.0 billion, compared with \$5.7 billion in the prior year. The current-year provision reflected lower net charge-offs and a reduction of \$3.0 billion to the allowance for loan losses due to lower estimated losses. The prior-year provision included a reduction of \$2.5 billion to the allowance for loan losses. The net charge-off rate was 6.40% (6.32% including loans held-for-sale), down from 10.99% in the prior year. Excluding the Washington Mutual and Commercial Card portfolios, the net charge-off rate¹ was 5.75%, down from 9.80% in the prior year.

Noninterest expense was \$3.2 billion, an increase of \$339 million, or 12%, from the prior year, due to the inclusion of the Commercial Card business and higher marketing expense. Excluding the impact of the Commercial Card business, noninterest expense increased 7%.

For further information on the credit card legislative changes, see CS discussion on page 79 of JPMorgan Chase's 2010 Annual Report.

¹ Includes loans held-for-sale, which are non-GAAP financial measures, to provide more meaningful measures that enable comparability with prior periods.

Effective January 1, 2011, the commercial card business that was previously in TSS was transferred to CS. There is (a)no material impact on the financial data; prior-year periods were not revised. The commercial card portfolio is excluded from business metrics and supplemental information where noted.

(b)Represents total net revenue less provision for credit losses.

(c)Reflects the impact of portfolio sales in the second quarter of 2011.

Total average loans include loans held-for-sale of \$276 million and \$1.6 billion for the three and six months ended June 30, 2011, respectively. There were no loans held-for-sale for the three and six months ended June 30, 2010.

(d)These amounts are excluded when calculating the net charge-off rate. The net charge-off rate including loans held-for-sale, which is a non-GAAP financial measure, was 5.81% and 6.32% for the three and six months ended June 30, 2011, respectively.

(e)Headcount includes 1,274 employees related to the transfer of the commercial card business from TSS to CS in the first quarter of 2011.

(f)Supplemental information is provided for Chase, excluding Washington Mutual and Commercial Card portfolios and including loans held-for-sale, which are non-GAAP financial measures, to provide more meaningful measures

that enable comparability with prior periods.

(g) For additional information on loan balances, delinquency rates, and net charge-off rates for the Washington Mutual portfolio, see Consumer credit portfolio on pages 77–86, and Note 13 on pages 134–148 of this Form 10-Q.

(h) As a percentage of average loans.

Total average loans include loans held-for-sale of \$276 million and \$1.6 billion for the three and six months ended

(i) June 30, 2011, respectively, and are included when calculating the net charge-off rate. There were no loans held-for-sale for the three and six months ended June 30, 2010.

(j) At June 30, 2011 and 2010, the 30+ day delinquent loans for Chase, excluding Washington Mutual and Commercial Card portfolios were \$3,070 million and \$5,703 million, respectively.

(k) At June 30, 2011 and 2010, the 90+ day delinquent loans for Chase, excluding Washington Mutual and Commercial Card portfolios were \$1,600 million and \$3,144 million, respectively.

COMMERCIAL BANKING

(a) CB client revenue from investment banking products and commercial card transactions is included in all other income.

(b) Total net revenue included tax-equivalent adjustments from income tax credits related to equity investments in designated community development entities that provide loans to qualified businesses in low-income communities as well as tax-exempt income from municipal bond activity of \$67 million and \$49 million for the three months ended June 30, 2011 and 2010, respectively, and \$132 million and \$94 million for the six months ended June 30,

2011 and 2010, respectively.

Effective January 1, 2011, product revenue from commercial card and standby letters of credit transactions is

(c) included in lending. For the three and six months ended June 30, 2011, the impact of the change was \$114 million and \$221 million, respectively. In prior-year periods, it was reported in treasury services.

(d) Represents the total revenue related to investment banking products sold to CB clients.

(e) Corporate Client Banking was known as Mid-Corporate Banking prior to January 1, 2011.

Quarterly results

Net income was \$607 million, a decrease of \$86 million, or 12%, from the prior year. The decrease was driven by an increase in the provision for credit losses, partially offset by higher net revenue.

Net revenue was a record \$1.6 billion, up by \$141 million, or 9%, from the prior year. Net interest income was \$1.0 billion, up by \$89 million, or 9%, driven by growth in liability balances, wider loan spreads and higher loan balances, partially offset by spread compression on liability products. Noninterest revenue was \$598 million, up \$52 million, or 10%, compared with the prior year, driven by higher investment banking revenue.

Revenue from Middle Market Banking was \$789 million, an increase of \$22 million, or 3%, from the prior year.

Revenue from Commercial Term Lending was \$286 million, an increase of \$49 million, or 21%. Revenue from Corporate Client Banking was \$339 million, an increase of \$54 million, or 19%. Revenue from Real Estate Banking was \$109 million, a decrease of \$16 million, or 13%.

The provision for credit losses was \$54 million, compared with a benefit of \$235 million in the prior year. Net charge-offs were \$40 million (0.16% net charge-off rate) and were largely related to commercial real estate; this compared with net charge-offs of \$176 million (0.74% net charge-off rate) in the prior year. The allowance for loan losses to end-of-period loans retained was 2.56%, down from 2.82% in the prior year. Nonaccrual loans were \$1.6 billion, down by \$1.4 billion, or 47%, from the prior year, primarily reflecting commercial real estate repayments and loan sales.

Noninterest expense was \$563 million, an increase of \$21 million, or 4%, from the prior year, primarily reflecting higher headcount-related expense.

Year-to-date results

Net income was \$1.2 billion, an increase of \$70 million, or 6%, from the prior year. The increase was driven by higher revenue, largely offset by an increase in the provision for credit losses.

Net revenue was \$3.1 billion, up by \$241 million, or 8%, compared with the prior year. Net interest income was \$2.0 billion, up by \$187 million, or 10%, driven by growth in liability balances, wider loan spreads and higher loan balances, partially offset by spread compression on liability products. Noninterest revenue was \$1.1 billion, an increase of \$54 million, or 5%, from the prior year largely driven by higher investment banking revenue.

Revenue from Middle Market Banking was \$1.5 billion, an increase of \$31 million, or 2%, from the prior year.

Revenue from Commercial Term Lending was \$572 million, an increase of \$106 million, or 23%. Revenue from Corporate Client Banking was \$629 million, an increase of \$81 million, or 15%. Revenue from Real Estate Banking was \$197 million, a decrease of \$28 million, or 12%.

The provision for credit losses was \$101 million, compared with a benefit of \$21 million in the prior year. Net charge-offs were \$71 million (0.14% net charge-off rate) and were largely related to commercial real estate, compared with \$405 million (0.85% net charge-off rate) in the prior year.

Noninterest expense was \$1.1 billion, an increase of \$45 million, or 4% from the prior year largely reflecting higher headcount-related expense.

IB manages traditional credit exposures related to the GCB on behalf of IB and TSS. Effective January 1, 2011, IB and TSS share the economics related to the Firm's GCB clients. Included within this allocation are net revenues, (a)provision for credit losses, as well as expenses. The prior-year period reflected a reimbursement to IB for a portion of the total costs of managing the credit portfolio. IB recognizes this credit allocation as a component of all other income.

(b)Revenue and trade finance loans are based on TSS management's view of the domicile of clients.

Loan balances include trade finance loans, wholesale overdrafts and commercial card. Effective January 1, 2011, (c)the commercial card loan business (of approximately \$1.2 billion) that was previously in TSS was transferred to CS. There is no material impact on the financial data; the prior-year period was not revised.

Quarterly results

Net income was \$333 million, an increase of \$41 million, or 14%, from the prior year.

Net revenue was \$1.9 billion, an increase of \$51 million, or 3%, from the prior year. Excluding the impact of the Commercial Card business, net revenue was up 6%. Worldwide Securities Services net revenue was \$1.0 billion, an increase of \$47 million, or 5%. The increase was driven by higher market levels, higher net interest income and net inflows of assets under custody. Treasury Services net revenue was \$930 million, relatively flat compared with the prior year, as higher trade loan volumes and higher deposit balances were largely offset by the transfer of Commercial Card business to Card Services in the first quarter of 2011 and lower spreads on deposits. Excluding the impact of the Commercial Card business, TS net revenue increased 7%.

TSS generated firmwide net revenue of \$2.6 billion, including \$1.6 billion by Treasury Services; of that amount, \$930 million was recorded in Treasury Services, \$556 million in Commercial Banking and \$65 million in other lines of business. The remaining \$1.0 billion of firmwide net revenue was recorded in Worldwide Securities Services.

Noninterest expense was \$1.5 billion, an increase of \$54 million, or 4%, from the prior year. The increase was mainly driven by continued investment in new product platforms, primarily related to international expansion, partially offset by the transfer of the Commercial Card business to Card Services. Excluding the impact of the Commercial Card business, TSS noninterest expense increased 9%.

Results for the quarter included a \$32 million pretax benefit related to the allocation between IB and TSS associated with credit extended to Global Corporate Bank (GCB) clients. IB manages core credit exposures related to the GCB on behalf of IB and TSS. Effective January 1, 2011, IB and TSS share the economics related to the Firm's GCB clients. Included within this allocation are net revenues and provision for credit losses as well as expenses.

Year-to-date results

Net income was \$649 million, an increase of \$78 million, or 14%, from the prior year.

Net revenue was \$3.8 billion, an increase of \$135 million, or 4%, from the prior year. Excluding the impact of the Commercial Card business, net revenue was up 7%. Worldwide Securities Services net revenue was \$2.0 billion, an increase of \$122 million, or 7%. The increase was driven by higher market levels, net inflows of assets under custody, and higher net interest income. Treasury Services net revenue was \$1.8 billion, relatively flat compared with the prior year, as higher trade loan volumes and higher deposit balances were largely offset by the transfer of Commercial Card business to Card Services in the first quarter of 2011 and lower spreads on deposits. Excluding the impact of the Commercial Card business, TS net revenue increased 7%.

TSS generated firmwide net revenue of \$5.0 billion, including \$3.0 billion by Treasury Services; of that amount, \$1.8 billion was recorded in Treasury Services, \$1.1 billion in Commercial Banking and \$128 million in other lines of business. The remaining \$2.0 billion of firmwide net revenue was recorded in Worldwide Securities Services.

Noninterest expense was \$2.8 billion, an increase of \$106 million, or 4%, from the prior year. The increase was mainly driven by continued investment in new product platforms, primarily related to international expansion, partially offset by the transfer of the Commercial Card business to Card Services. Excluding the impact of the Commercial Card business, TSS noninterest expense increased 9%.

Results for the year-to-date included a \$59 million pretax benefit related to the allocation between IB and TSS associated with credit extended to GCB clients.

Effective January 1, 2011, certain CB revenues were excluded in the TS firmwide metrics; they are instead directly captured within CB's lending revenue by product. The impact of this change was \$114 million for the three months ended June 30, 2011, and \$221 million for the six months ended June 30, 2011. In previous periods, these revenues were included in CB's treasury services revenue by product.

(b) TSS firmwide revenue includes foreign exchange ("FX") revenue recorded in TSS and FX revenue associated with TSS customers who are FX customers of IB. However, some of the FX revenue associated with TSS customers

who are FX customers of IB is not included in TS and TSS firmwide revenue. The total FX revenue generated was \$165 million and \$175 million for the three months ended June 30, 2011 and 2010, respectively, and \$325 million and \$312 million for the six months ended June 30, 2011 and 2010, respectively.

(c) Firmwide liability balances include liability balances recorded in CB.

Overhead ratios have been calculated based on firmwide revenue and TSS and TS expense, respectively, including

(d) those allocated to certain other lines of business. FX revenue and expense recorded in IB for TSS-related FX activity are not included in this ratio.

(e) International electronic funds transfer includes non-U.S. dollar Automated Clearing House (“ACH”) and clearing volume.

Wholesale cards issued and outstanding include U.S. domestic commercial, stored value, prepaid and government

(f) electronic benefit card products. Effective January 1, 2011, the commercial card portfolio was transferred from TSS to CS.

ASSET MANAGEMENT

For a discussion of the business profile of AM, see pages 86–88 of JPMorgan Chase’s 2010 Annual Report and Introduction on page 5 of this Form 10-Q.

Quarterly results

Net income was \$439 million, an increase of \$48 million, or 12%, from the prior year. These results reflected higher net revenue, predominantly offset by higher noninterest expense.

Net revenue was \$2.5 billion, an increase of \$469 million, or 23%, from the prior year. Noninterest revenue was \$2.1 billion, up by \$440 million, or 26%, due to the effect of higher market levels, net inflows to products with higher margins, higher valuations of seed capital investments and higher performance fees. Net interest income was \$398 million, up by \$29 million, or 8%, due to higher deposit and loan balances, partially offset by narrower deposit spreads.

Revenue from Private Banking was \$1.3 billion, up 12% from the prior year. Revenue from Institutional was \$704 million, up 55%. Revenue from Retail was \$544 million, up 18%.

The provision for credit losses was \$12 million, compared with \$5 million in the prior year.

Noninterest expense was \$1.8 billion, an increase of \$389 million, or 28%, from the prior year, largely resulting from an increase in headcount and higher performance-based compensation.

Year-to-date results

Net income was \$905 million, an increase of \$122 million, or 16%, from the prior year. These results reflected higher net revenue and a lower provision for credit losses, predominantly offset by higher noninterest expense.

Net revenue was \$4.9 billion, an increase of \$744 million, or 18%, from the prior year. Noninterest revenue was \$4.2 billion, up by \$686 million, or 20%, due to the effect of higher market levels, net inflows to products with higher margins, higher loan originations and higher valuations of seed capital investments. Net interest income was \$784 million, up by \$58 million, or 8%, due to higher deposit and loan balances, partially offset by narrower deposit spreads.

Revenue from Private Banking was \$2.6 billion, up 13% from the prior year. Revenue from Institutional was \$1.3 billion, up 25%. Revenue from Retail was \$1.1 billion, up 21%.

The provision for credit losses was \$17 million, compared with \$40 million in the prior year.

Noninterest expense was \$3.5 billion, an increase of \$607 million, or 21%, from the prior year, largely resulting from an increase in headcount and higher performance-based compensation.

Assets under supervision

Assets under supervision were \$1.9 trillion, an increase of \$284 billion, or 17%, from the prior year. Assets under management were \$1.3 trillion, an increase of \$181 billion, or 16%. Both increases were due to the effect of higher market levels and net inflows to long-term products, partially offset by net outflows from liquidity products. Custody, brokerage, administration and deposit balances were \$582 billion, up by \$103 billion, or 22%, due to the effect of higher market levels and custody and brokerage inflows.

Corporate	58	642	(91))	397	815	(51))
Total net income	\$502	\$653	(23))	\$1,224	\$881	39
Headcount	21,444	19,482	10	21,444	19,482	10

(a) Net interest income in 2011 was lower compared with 2010, primarily driven by lower funding benefits on the securities portfolio.

Total net revenue included tax-equivalent adjustments, predominantly due to tax-exempt income from municipal (b) bond investments of \$69 million and \$57 million for the three months ended June 30, 2011 and 2010, respectively; and \$133 million and \$105 million for the six months ended June 30, 2011 and 2010, respectively.

Included litigation expense of \$1.3 billion and \$1.6 billion for the three and six months ended June 30, 2011, (c) respectively, compared with \$694 million and \$3.0 billion for the three and six months ended June 30, 2010, respectively.

Quarterly results

Net income was \$502 million, compared with net income of \$653 million in the prior year.

Private Equity net income was \$444 million, compared with \$11 million in the prior year. Net revenue was \$796 million, an increase of \$748 million, driven primarily by gains on sales and net increases in investment valuations. Noninterest expense was \$102 million, an increase of \$70 million from the prior year.

Corporate reported net income of \$58 million, compared with \$642 million in the prior year. Net revenue was \$1.3 billion, including \$837 million of securities gains. Noninterest expense included \$1.3 billion of additional litigation reserves, predominantly for mortgage-related matters. Noninterest expense in the prior year included \$694

million of additional litigation reserves.

Year-to-date results

Net income was \$1.2 billion, compared with net income of \$881 million in the prior year.

Private Equity net income was \$827 million, compared with \$66 million in the prior year. Net revenue was \$1.5 billion, an increase of \$1.3 billion, driven primarily by gains on sales and net increases in investment valuations.

Noninterest expense was \$215 million, an increase of \$153 million from the prior year.

Corporate reported net income of \$397 million, compared with \$815 million in the prior year. Net revenue was \$2.1 billion, including \$939 million of securities gains. Noninterest expense was \$1.8 billion, which included \$1.6 billion of additional litigation reserves, predominantly for mortgage related matters. Noninterest expense in the prior year was \$3.3 billion which included \$3.0 billion of additional litigation reserves.

(a) Unrealized gains/(losses) contain reversals of unrealized gains and losses that were recognized in prior periods and have now been realized.

(b) Included in principal transactions revenue in the Consolidated Statements of Income.

(c) For more information on the Firm's policies regarding the valuation of the private equity portfolio, see Note 3 on pages 170–187 of JPMorgan Chase's 2010 Annual Report.

(d) Unfunded commitments to third-party private equity funds were \$876 million and \$1.0 billion at June 30, 2011, and December 31, 2010, respectively.

The carrying value of the private equity portfolio at June 30, 2011, and December 31, 2010, was \$8.8 billion and \$8.7 billion, respectively. The increase in the portfolio during the six months ended June 30, 2011, is primarily due to net increases in investment valuations in the portfolio and incremental new investments, partially offset by sales. The

portfolio represented 6.6% and 6.9% of the Firm's stockholders' equity less goodwill at June 30, 2011, and December 31, 2010, respectively.

INTERNATIONAL OPERATIONS

During the three and six months ended June 30, 2011, the Firm reported approximately \$6.8 billion and \$13.6 billion, respectively, of revenue derived from clients, customers and counterparties domiciled outside of North America. Of those amounts, approximately 69% and 68%, respectively, was derived from Europe/Middle East/Africa ("EMEA"); approximately 21% and 23%, respectively, from Asia/Pacific; and approximately 10% and 9%, respectively, from Latin America/Caribbean. During the three and six months ended June 30, 2010, the Firm reported approximately \$4.9 billion and \$11.7 billion, respectively, of revenue derived from clients, customers and counterparties domiciled outside of North America. Of those amounts, approximately 63% and 67%, respectively, was derived from EMEA; approximately 28% and 25%, respectively, from Asia/Pacific; and approximately 9% and 8%, respectively, from Latin America/Caribbean.

The Firm is committed to further expanding its wholesale business activities outside of the United States, and it intends to add additional client-serving bankers, as well as product and sales support personnel, to address the needs of the Firm's clients located in these regions. With a comprehensive and coordinated international business strategy and growth plan, efforts and investments for growth outside of the United States will be accelerated and prioritized. Set forth below are certain key metrics related to the Firm's wholesale international operations including, for each of EMEA, Asia Pacific, and Latin America/Caribbean, the number of countries in each such region in which it operates, front-office headcount, number of clients, revenue and selected balance sheet data. For additional information regarding international operations, see International Operations on page 91, and Note 33 on page 290 of JPMorgan Chase's 2010 Annual Report.

Effective January 1, 2011, \$23.0 billion of long-term advances from FHLBs were reclassified from other borrowed (a) funds to long-term debt. The prior-year period has been revised to conform with the current presentation. For additional information, see Note 3 and Note 18 on pages 102–114 and 164, respectively, of this Form 10-Q.

Consolidated Balance Sheets overview

JPMorgan Chase's assets and liabilities increased from December 31, 2010, predominantly due to an overall growth in wholesale clients' cash management activities in the first six months of 2011, as well as an increase in deposit inflows toward the end of the second quarter of 2011. The inflows contributed to higher deposits with banks – in particular, balances due from Federal Reserve Banks. In addition to deposits with banks, other factors affecting the increase in total assets included higher accrued interest and accounts receivable offset partially by lower trading assets – debt and equity instruments. In addition to deposits, other factors affecting the increase in total liabilities were higher commercial paper, and accounts payable and other liabilities, offset by lower federal funds purchased and securities

loaned or sold under repurchase agreements, and lower beneficial interests issued by consolidated VIEs. The increase in stockholders' equity primarily reflected net income for the six months ended June 30, 2011, net of repurchases of common stock and the declaration of dividends.

The following is a discussion of the significant changes in the specific line captions of the Consolidated Balance Sheets from December 31, 2010. For a description of the specific line captions discussed below, see pages 92–94 of JPMorgan Chase’s 2010 Annual Report.

Deposits with banks; federal funds sold and securities purchased under resale agreements; and securities borrowed
Deposits with banks increased significantly, reflecting a higher level of balances due from Federal Reserve Banks; the increase was predominantly the result of an overall growth in wholesale clients’ cash management activities in the first six months of 2011, as well as an increase in inflows of short-term wholesale deposits from TSS clients toward the end of June 2011. For additional information, see the deposits discussion below. Securities purchased under resale agreements and securities borrowed decreased predominantly in IB, reflecting lower client financing activity.

Trading assets and liabilities – debt and equity instruments

Trading assets – debt and equity instruments decreased based upon client market-making activity in IB. The decrease was primarily due to declines in U.S. government agency mortgage-backed securities and equity securities, partially offset by an increase in non-U.S. government debt securities. For additional information, refer to Note 3 on pages 102–114 of this Form 10-Q.

Trading assets and liabilities – derivative receivables and payables

Derivative receivables and payables decreased, largely due to a reduction in foreign exchange derivatives offset partially by an increase in equity derivatives, from IB’s market-making activity. For additional information, refer to Derivative contracts on pages 73–75, and Note 3 and Note 5 on pages 102–114 and 117–124, respectively, of this Form 10-Q.

Securities

Securities increased, largely due to repositioning of the portfolio in Corporate in response to changes in the interest rate environment. This repositioning increased the levels of non-U.S. government debt and mortgage-backed securities, and reduced the levels of corporate debt and U.S. government agency securities. For additional information related to securities, refer to the discussion in the Corporate/Private Equity segment on pages 46–47, and Note 3 and Note 11 on pages 102–114 and 128–132, respectively, of this Form 10-Q.

Loans and allowance for loan losses

Loans decreased modestly, reflecting continued portfolio runoff in RFS, as well as lower seasonal balances, higher repayment rates, continued runoff of the Washington Mutual portfolio and the sale of the Kohl’s portfolio in CS. These decreases were offset partially by an increase in wholesale loans, reflecting growth in client activity in all of the Firm’s wholesale businesses. The allowance for loan losses decreased, predominantly as a result of lower estimated losses in the credit card loan portfolio, as well as loan sales and net repayments in the wholesale portfolio. For a more detailed discussion of the loan portfolio and the allowance for loan losses, refer to Credit Risk Management on pages 67–88, and Notes 3, 4, 13 and 14 on pages 102–114, 114–116, 134–148 and 149–150, respectively, of this Form 10-Q.

Accrued interest and accounts receivable

Accrued interest and accounts receivable increased, largely from higher receivables from securities transactions pending settlement.

Mortgage servicing rights

MSRs decreased, primarily due to changes to inputs and assumptions in the MSR valuation model. During the first quarter of 2011, the Firm revised its cost to service assumption to reflect the estimated impact of higher servicing costs to enhance servicing processes, particularly loan modification and foreclosure procedures, including costs to comply with Consent Orders entered into with banking regulators, which resulted in a \$1.1 billion decrease in the fair value of the MSR asset. Declining interest rates also contributed to the decrease in the fair value of the MSR asset. Other than the increased cost to service assumption and the decrease in interest rates, predominately all of the changes in the fair value of the MSR asset resulted from the largely offsetting impacts of new capitalization and amortization. For additional information on MSRs, see Note 3 and Note 16 on pages 102–114 and 159–163, respectively, of this Form 10-Q.

Other intangible assets

The decrease in other intangible assets was predominantly due to amortization. For additional information on other intangible assets, see Note 16 on pages 159–163 of this Form 10-Q.

Deposits

Deposits increased significantly, predominantly as a result of an overall growth in wholesale clients' cash management activities during the first six months of 2011 and an increase in inflows toward the end of June 2011 of short-term wholesale deposits from TSS clients. Also contributing to the increase in deposits was growth in the number of clients and higher balances in CB, AM and RFS (the RFS deposits were net of the attrition related to inactive and low-balance Washington Mutual accounts). For more information on deposits, refer to the RFS and AM segment discussions on pages 23–32 and 42–45, respectively; the Liquidity Risk Management discussion on pages 62–66; and Notes 3 and 17 on pages 102–114 and 164, respectively, of this Form 10-Q. For more information on wholesale liability balances, which includes deposits, refer to the CB and TSS segment discussions on pages 36–38 and 39–41, respectively, of this Form 10-Q.

Federal funds purchased and securities loaned or sold under repurchase agreements

Securities sold under repurchase agreements decreased predominantly in IB, due to lower financing of the Firm's trading assets, as well as lower client financing balances. For additional information on the Firm's Liquidity Risk Management, see pages 62–66 of this Form 10-Q.

Commercial paper and other borrowed funds

Commercial paper and other borrowed funds increased, due to growth in the volume of liability balances in sweep accounts related to TSS's cash management product, and a modest incremental increase in commercial paper issued in wholesale funding markets. For additional information on the Firm's Liquidity Risk Management and other borrowed funds, see pages 62–66, and Note 18 on page 164 of this Form 10-Q.

Accounts payable and other liabilities

Accounts payable and other liabilities increased, largely due to higher IB Prime Services customer balances and additional litigation reserves, predominantly for mortgage-related matters.

Beneficial interests issued by consolidated VIEs

Beneficial interests decreased, predominantly due to maturities of Firm-sponsored credit card securitization transactions. For additional information on Firm-sponsored VIEs and loan securitization trusts, see Off-Balance Sheet Arrangements below, and Note 15 on pages 151–159 of this Form 10-Q.

Long-term debt

Long-term debt increased, due to net issuances of long-term borrowings. For additional information on the Firm's long-term debt activities, see the Liquidity Risk Management discussion on pages 62–66 of this Form 10-Q.

Stockholders' equity

Total stockholders' equity increased, predominantly due to net income in the first half of 2011; a net increase in accumulated other comprehensive income, reflecting net unrealized gains on AFS securities associated with increased market values on agency MBS and municipal securities, partially offset by the widening of spreads on non-U.S. corporate debt, the realization of gains due to portfolio repositioning, and the net change in the fair values of derivatives used for cash flow-hedging purposes; and net issuances and commitments to issue under the Firm's employee stock-based compensation plans. The increase was partially offset by repurchases of common stock and the declaration of cash dividends on common and preferred stock.

OFF-BALANCE SHEET ARRANGEMENTS

JPMorgan Chase is involved with several types of off-balance sheet arrangements, including through special-purpose entities (“SPEs”), which are a type of VIE, and through lending-related financial instruments (e.g., commitments and guarantees). For further discussion, see Off-Balance Sheet Arrangements and Contractual Cash Obligations on pages 95–101 of JPMorgan Chase’s 2010 Annual Report.

Special-purpose entities

SPEs are the most common type of VIE, used in securitization transactions in order to isolate certain assets and distribute related cash flows to investors. SPEs continue to be an important part of the financial markets, including the mortgage- and asset-backed securities and commercial paper markets, as they provide market liquidity by facilitating investors’ access to specific portfolios of assets and risks. The Firm holds capital, as deemed appropriate, against all SPE-related transactions and related exposures, such as derivative transactions and lending-related commitments and guarantees. For further information on the Firm’s involvement with SPEs, see Note 15 on pages 151–159 of this Form 10-Q; and Note 1 on pages 164–165 and Note 15 on pages 244–259 of JPMorgan Chase’s 2010 Annual Report.

Implications of a credit rating downgrade to JPMorgan Chase Bank, N.A.

For certain liquidity commitments to SPEs, the Firm could be required to provide funding if the short-term credit rating of JPMorgan Chase Bank, N.A., were downgraded below specific levels, primarily “P-1,” “A-1” and “F1” for Moody’s, Standard & Poor’s and Fitch, respectively. The aggregate amounts of these liquidity commitments, to both consolidated and nonconsolidated SPEs, were \$35.7 billion and \$34.2 billion at June 30, 2011, and December 31, 2010, respectively. Alternatively, if JPMorgan Chase Bank, N.A., were downgraded, the Firm could be replaced by another liquidity provider in lieu of providing funding under the liquidity commitment or, in certain circumstances, the Firm could facilitate the sale or refinancing of the assets in the SPE in order to provide liquidity.

Special-purpose entities revenue

The following table summarizes certain revenue information related to consolidated and nonconsolidated VIEs with which the Firm has significant involvement. The revenue reported in the table below primarily represents contractual servicing and credit fee income (i.e., income from acting as administrator, structurer or liquidity provider). It does not include gains and losses from changes in the fair value of trading positions (such as derivative transactions) entered into with VIEs. Those gains and losses are recorded in principal transactions revenue.

Revenue from VIEs and securitization entities ^(a) (in millions)	Three months ended June 30,		Six months ended June 30,	
	2011	2010	2011	2010
Multi-seller conduits	\$44	\$60	\$92	\$127
Investor intermediation	10	12	25	25
Other securitization entities ^(b)	361	544	773	1,088
Total	\$415	\$616	\$890	\$1,240

(a) Includes revenue associated with both consolidated VIEs and significant nonconsolidated VIEs.

(b) Excludes servicing revenue from loans sold to and securitized by third parties.

Off-balance sheet lending-related financial instruments, guarantees and other commitments

JPMorgan Chase provides lending-related financial instruments (e.g., commitments and guarantees) to meet the financing needs of its customers. The contractual amount of these financial instruments represents the maximum possible credit risk to the Firm should the counterparty draw upon the commitment or the Firm be required to fulfill its obligation under the guarantee, and should the counterparty subsequently fail to perform according to the terms of the contract. Most of these commitments and guarantees expire without being drawn or a default occurring. As a result, the total contractual amount of these instruments is not, in the Firm’s view, representative of its actual future credit exposure or funding requirements. For further discussion of lending-related commitments and guarantees and the Firm’s accounting for them, see Lending-related commitments on page 75 and Note 21 on pages 167–171 of this Form 10-Q; and Lending-related commitments on page 128 and Note 30 on pages 275–280 of JPMorgan Chase’s 2010 Annual Report.

The following table presents, as of June 30, 2011, the amounts by contractual maturity of off-balance sheet lending-related financial instruments, guarantees and other commitments. The amounts in the table for credit card and

home equity lending-related commitments represent the total available credit to borrowers for these products. The Firm has not experienced, and does not anticipate, that all available lines of credit for these products would be used by borrowers at the same time. The Firm can reduce or cancel credit card lines of credit by providing the borrower notice or, in some cases, without notice as permitted by law. The Firm may reduce or close home equity lines of credit when there are significant decreases in the value of the underlying property or when there has been a demonstrable decline in the creditworthiness of the borrower. The accompanying table excludes certain guarantees that do not have a contractual maturity date (e.g., loan sale and securitization-related indemnification obligations). For further information, see discussion of Mortgage repurchase liability and Loan sale and securitization-related indemnifications on

pages 53–56 and in Note 21 on pages 167–171, respectively, of this Form 10-Q, and Repurchase liability and Loan sale and securitization-related indemnifications on pages 98–101 and in Note 30 on pages 275–280, respectively, of JPMorgan Chase’s 2010 Annual Report.

Other guarantees and commitments ^(g)	1,113	232	308	4,524	6,177	6,492

(a) At June 30, 2011, and December 31, 2010, represented the contractual amount net of risk participations totaling \$608 million and \$542 million, respectively, for Other unfunded commitments to extend credit; \$22.3 billion and

\$22.4 billion, respectively, for Standby letters of credit and other financial guarantees; and \$1.4 billion and \$1.1 billion, respectively, for Other letters of credit. In regulatory filings with the Federal Reserve these commitments are shown gross of risk participations.

(b) At June 30, 2011, and December 31, 2010, included credit enhancements and bond and commercial paper liquidity commitments to U.S. states and municipalities, hospitals and other not-for-profit entities of \$46.4 billion and \$43.4 billion, respectively. These commitments also include liquidity facilities to nonconsolidated municipal bond VIEs; for further information, see Note 15 on pages 151–159 of this Form 10-Q.

(c) At June 30, 2011, and December 31, 2010, included unissued Standby letters of credit commitments of \$41.9 billion and \$41.6 billion, respectively.

At June 30, 2011, and December 31, 2010, JPMorgan Chase held collateral relating to \$39.3 billion and \$37.8 billion, respectively, of Standby letters of credit; and \$1.7 billion and \$2.1 billion, respectively, of collateral related to Other letters of credit.

(e) At June 30, 2011, and December 31, 2010, collateral held by the Firm in support of securities lending indemnification agreements totaled \$207.9 billion and \$185.0 billion, respectively. Securities lending collateral comprises primarily cash, and securities issued by governments that are members of the Organisation for Economic Co-operation and Development (“OECD”) and U.S. government agencies.

(f) Represents the notional amounts of derivative contracts qualifying as guarantees. For further discussion of guarantees, see Note 5 on pages 117–124 and Note 21 on pages 167–171 of this Form 10-Q.

(g) At June 30, 2011, and December 31, 2010, included unfunded commitments of \$876 million and \$1.0 billion, respectively, to third-party private equity funds; and \$1.5 billion and \$1.4 billion, respectively, to other equity investments. These commitments included \$815 million and \$1.0 billion, respectively, related to investments that are generally fair valued at net asset value as discussed in Note 3 on pages 102–114 of this Form 10-Q. In addition, at June 30, 2011, and December 31, 2010, included letters of credit hedged by derivative transactions and managed on a market risk basis of \$3.8 billion and \$3.8 billion, respectively .

Mortgage repurchase liability

In connection with the Firm’s mortgage loan sale and securitization activities with Fannie Mae and Freddie Mac (the “GSEs”) and other mortgage loan sale and private-label securitization transactions, the Firm has made representations and warranties that the loans sold meet certain requirements. The Firm may be, and has been, required to repurchase loans and/or indemnify the GSEs and other investors for losses due to material breaches of these representations and warranties; however, predominantly all of the

repurchase demands received by the Firm and the Firm's losses realized to date are related to loans sold to the GSEs. The primary reasons for repurchase demands from the GSEs relate to alleged misrepresentations primarily arising from: (i) credit quality and/or undisclosed debt of the borrower; (ii) income level and/or employment status of the borrower; and (iii) appraised value of collateral. In substantially all instances where mortgage insurance has been rescinded, this resulted in a violation of representations and warranties made to the GSEs and, therefore, has also been a cause of repurchase demands from the GSEs.

From 2005 to 2008, excluding Washington Mutual, loans sold to the GSEs subject to certain representations and warranties for which the Firm may be liable were approximately \$380 billion; this amount represents the principal amount sold and has not been adjusted for subsequent activity, such as borrower repayments of principal or repurchases completed to date. In addition, from 2005 to 2008, Washington Mutual sold approximately \$150 billion of loans to the GSEs subject to certain representations and warranties. Subsequent to the Firm's acquisition of certain assets and liabilities of Washington Mutual from the FDIC in September 2008, the Firm resolved and/or limited certain current and future repurchase demands for loans sold to the GSEs by Washington Mutual, although it remains the Firm's position that such obligations remain with the FDIC receivership. For additional information regarding loans sold to the GSEs, see Repurchase liability on pages 98–101 of JPMorgan Chase's 2010 Annual Report. The Firm also sells loans in securitization transactions with Ginnie Mae; these loans are typically insured or guaranteed by a government agency. The Firm, in its role as servicer, may elect, but is not required, to repurchase delinquent loans securitized by Ginnie Mae, including those that have been sold back to Ginnie Mae subsequent to modification. Amounts due under the terms of these repurchased loans continue to be insured and the reimbursement of insured amounts is proceeding normally. Accordingly, the Firm has not recorded any repurchase liability related to these loans.

From 2005 to 2008, the Firm and certain acquired entities made certain loan level representations and warranties in connection with approximately \$450 billion of residential mortgage loans that were sold or deposited into private-label securitizations. Of the \$450 billion originally sold or deposited (including \$165 billion by Washington Mutual, as to which the Firm maintains that certain of the repurchase obligations remain with the FDIC receivership), approximately \$185 billion of principal has been repaid (including \$68 billion related to Washington Mutual). Approximately \$90 billion of the principal has been liquidated (including \$32 billion related to Washington Mutual), with an average loss severity of 58%. The remaining outstanding principal balance of these loans (including Washington Mutual) was, as of June 30, 2011, approximately \$175 billion of which \$62 billion was 60 days or more past due. The remaining outstanding principal balance of loans related to Washington Mutual was approximately \$65 billion of which \$23 billion were 60 days or more past due. For additional information regarding loans sold to private investors, see Repurchase liability on pages 98–101 of JPMorgan Chase's 2010 Annual Report.

To date, loan-level repurchase demands in private-label securitizations have been limited. As a result, the Firm's repurchase reserve primarily relates to loan sales to the GSEs and is predominantly calculated based on the Firm's repurchase activity experience with the GSEs. While it is possible that the volume of repurchase demands from other investors in private-label securitizations will increase in the future, the Firm cannot offer a reasonable estimate of those future demands based on historical experience to date. To the extent that repurchase demands are received related to loans that the Firm purchased from third parties that remain viable, the Firm typically will have the right to seek a recovery of related repurchase losses from the related third party. Claims related to private-label securitizations (including claims from insurers that have guaranteed certain obligations of the securitization trusts) have, thus far, generally manifested themselves through securities-related litigation. The Firm does not consider these claims in estimating its repurchase liability; rather, the Firm separately evaluates its exposure to such litigation in establishing its litigation reserves. For additional information regarding litigation, see Note 23 on pages 172–179 of this Form 10-Q.

Estimated Mortgage Repurchase Liability

To estimate the Firm's repurchase liability arising from breaches of representations and warranties, the Firm considers:

- (i) the level of outstanding unresolved repurchase demands,
 - estimated probable future repurchase demands considering information about file requests, delinquent and
- (ii) liquidated loans, resolved and unresolved mortgage insurance rescission notices and the Firm's historical experience,

- (iii) the potential ability of the Firm to cure the defects identified in the repurchase demands (“cure rate”),
- (iv) the estimated severity of loss upon repurchase of the loan or collateral, make-whole settlement, or indemnification,
- (v) the Firm’s potential ability to recover its losses from third-party originators,
and
- (vi) the terms of agreements with certain mortgage insurers and other
parties.

Based on these factors, the Firm has recognized a repurchase liability of \$3.6 billion and \$3.3 billion as of June 30, 2011, and December 31, 2010, respectively. For further discussion of the repurchase demand process and the approach used by the Firm to estimate the repurchase liability, see Repurchase liability on pages 98–101 of JPMorgan Chase’s 2010 Annual Report.

The following table provides information about outstanding repurchase demands and unresolved mortgage insurance rescission notices, excluding those related to Washington Mutual, at each of the past five quarter-end dates.

Outstanding repurchase demands and unresolved mortgage insurance rescission notices by counterparty type^(a)

(in millions)	June 30, 2011	March 31, 2011	December 31, 2010	September 30, 2010	June 30, 2010
GSEs and other	\$1,826	\$1,321	\$1,251	\$1,333	\$1,562
Mortgage insurers	1,093	1,240	1,121	1,007	1,319
Overlapping population ^(b)	(145)	(127)	(104)	(109)	(239)
Total	\$2,774	\$2,434	\$2,268	\$2,231	\$2,642

Prior periods have been revised to include repurchase demands and mortgage insurance rescission notices related to (a) certain loans sold or deposited into private-label securitizations. The Firm's outstanding repurchase demands are predominantly from the GSEs.

Because the GSEs may make repurchase demands based on mortgage insurance rescission notices that remain (b) unresolved, certain loans may be subject to both an unresolved mortgage insurance rescission notice and an unresolved repurchase demand.

The following tables show the trend in repurchase demands and mortgage insurance rescission notices received by loan origination vintage, excluding those related to Washington Mutual, for the past five quarters. The Firm expects repurchase demands to remain at elevated levels.

Quarterly mortgage repurchase demands received by loan origination vintage^(a)

(in millions)	June 30, 2011	March 31, 2011	December 31, 2010	September 30, 2010	June 30, 2010

2005	24	32	9	7	9
2006	39	65	53	69	48
2007	72	144	142	134	182
2008	31	49	50	43	52
Post-2008	1	1	1	—	—
Total mortgage insurance rescissions received ^(b)	\$170	\$296	\$258	\$258	\$295

(a) Prior periods have been revised to include mortgage insurance rescission notices related to certain loans sold or deposited into private-label securitizations.

(b) Mortgage insurance rescissions may ultimately result in a repurchase demand from the GSEs on a lagged basis.

This table includes mortgage insurance rescission notices for which the GSEs may also have issued a repurchase

demand.

Because the Firm has demonstrated an ability to cure certain types of defects more frequently than others (e.g., missing documents), trends in the types of defects identified as well as the Firm's historical data are considered in estimating the future cure rate. Since the beginning of 2010, the Firm's overall cure rate, excluding Washington Mutual, has been approximately 50%. Repurchases that have resulted from mortgage insurance rescissions are reflected in the Firm's overall cure rate. While the actual cure rate may vary from quarter to quarter, the Firm expects that the overall cure rate will remain in the 40–50% range for the foreseeable future.

The Firm has not observed a direct relationship between the type of defect that causes the breach of representations and warranties and the severity of the realized loss. Therefore, the loss severity assumption is estimated using the Firm's historical experience and projections regarding home price appreciation. Actual loss severities on finalized repurchases and "make-whole" settlements to date, excluding any related to Washington Mutual, currently average approximately 50%, but may vary from quarter to quarter based on the characteristics of the underlying loans and changes in home prices.

When a loan was originated by a third-party correspondent, the Firm typically has the right to seek a recovery of related repurchase losses from the correspondent originator. Correspondent-originated loans comprise approximately 59% of loans underlying outstanding repurchase demands, excluding those related to Washington Mutual. The actual third-party recovery rate may vary from quarter to quarter based upon the underlying mix of correspondents (e.g., active, inactive, out-of-business originators) from which recoveries are being sought.

The Firm has entered into agreements with two mortgage insurers to resolve their claims on certain portfolios for which the Firm is a servicer. These two agreements cover and have resolved approximately one-third of the Firm's total mortgage insurance rescission risk exposure, both in terms of the unpaid principal balance of serviced loans covered by mortgage insurance and the amount of mortgage insurance coverage. The impact of these agreements is reflected in the repurchase liability and the disclosed outstanding mortgage insurance rescission notices as of June 30, 2011. The Firm has considered its remaining unresolved mortgage insurance rescission risk exposure in estimating the repurchase liability as of June 30, 2011.

Substantially all of the estimates and assumptions underlying the Firm's established methodology for computing its recorded repurchase liability – including the amount of probable future demands from purchasers (which is in part based on the historical experience), the ability of the Firm to cure identified defects, the severity of loss upon repurchase or foreclosure and recoveries from third parties – require application of a significant level of management judgment. Estimating the repurchase liability is further complicated by limited and rapidly changing historical data and uncertainty surrounding numerous external factors, including: (i) economic factors (for example, further declines in home prices and changes in borrower behavior may lead to increases in the number of defaults, the severity of losses, or both), and (ii) the level of future demands, which is dependent, in part, on actions taken by third parties, such as the GSEs and mortgage insurers. While the Firm uses the best information available to it in estimating its repurchase liability, the estimation process is inherently uncertain, imprecise and potentially volatile as additional information is obtained and external factors continue to evolve.

The following table summarizes the change in the repurchase liability for each of the periods presented.

Summary of changes in mortgage repurchase liability

(in millions)	Three months ended June 30,		Six months ended June 30,	
	2011	2010	2011	2010
Repurchase liability at beginning of period	\$3,474	\$1,982	\$3,285	\$1,705
Realized losses ^(a)	(241)	(317)	(472)	(563)
Provision for repurchase losses	398	667	818	1,190
Repurchase liability at end of period	\$3,631	\$2,332	\$3,631	\$2,332

(a) Includes principal losses and accrued interest on repurchased loans, “make-whole” settlements, settlements with claimants, and certain related expenses. Make-whole settlements were \$126 million and \$150 million for the three months ended June 30, 2011 and 2010, respectively, and \$241 million and \$255 million for the six months ended June 30, 2011 and 2010, respectively.

The following table summarizes the total unpaid principal balance of repurchases during the periods indicated.

Unpaid principal balance of mortgage loan repurchases^(a)

(in millions)	Three months ended June 30,		Six months ended June 30,	
	2011	2010	2011	2010
Ginnie Mae ^(b)	\$1,228	\$3,230	\$2,713	\$5,240
GSEs and other ^{(c)(d)}	247	494	463	815
Total	\$1,475	\$3,724	\$3,176	\$6,055

(a) Excludes mortgage insurers. While the rescission of mortgage insurance may ultimately trigger a repurchase demand, the mortgage insurers themselves do not present repurchase demands to the Firm.

(b) In substantially all cases, these repurchases represent the Firm's voluntary repurchase of certain delinquent loans from loan pools or packages as permitted by Ginnie Mae guidelines (i.e., they do not result from repurchase demands due to breaches of representations and warranties). The Firm typically elects to repurchase these delinquent loans as it continues to service them and/or manage the foreclosure process in accordance with applicable requirements of Ginnie Mae, the Federal Housing Administration (“FHA”), Rural Housing Administration (“RHA”) and/or the U.S. Department of Veterans Affairs (“VA”).

(c) Predominantly all of the repurchases related to GSEs.

(d)

Nonaccrual loans held-for-investment included \$378 million and \$354 million at June 30, 2011, and December 31, 2010, respectively, of loans repurchased as a result of breaches of representations and warranties.

CAPITAL MANAGEMENT

The following discussion of JPMorgan Chase's capital management highlights developments since December 31, 2010, and should be read in conjunction with Capital Management on pages 102–106 of JPMorgan Chase's 2010 Annual Report.

The Firm's capital management objectives are to hold capital sufficient to:

- Cover all material risks underlying the Firm's business activities;
- Maintain "well-capitalized" status under regulatory requirements;
- Achieve debt rating targets;
- Retain flexibility to take advantage of future investment opportunities; and
- Build and invest in businesses, even in a highly stressed environment.

Regulatory capital

The Federal Reserve establishes capital requirements, including well-capitalized standards, for the consolidated financial holding company. The Office of the Comptroller of the Currency ("OCC") establishes similar capital requirements and standards for the Firm's national banks, including JPMorgan Chase Bank, N.A. and Chase Bank USA, N.A. As of June 30, 2011, and December 31, 2010, JPMorgan Chase and all of its banking subsidiaries were well-capitalized and met all capital requirements to which each was subject.

The following table presents the regulatory capital, assets and risk-based capital ratios for JPMorgan Chase and its significant banking subsidiaries at June 30, 2011, and December 31, 2010. These amounts are determined in accordance with regulations issued by the Federal Reserve and/or OCC.

	JPMorgan Chase & Co. ⁽ⁱ⁾		JPMorgan Chase Bank, N.A. ⁽ⁱ⁾		Chase Bank USA, N.A. ⁽ⁱ⁾		Well-capitalized ratios ^(j)	Minimum capital ratios ^(j)

Tier 1 common ^(b)	10.1	9.8	9.2	9.4	13.0	11.1	NA	NA

At June 30, 2011, for JPMorgan Chase and JPMorgan Chase Bank, N.A., trust preferred capital debt securities were \$19.7 billion and \$600 million, respectively. If these securities were excluded from the calculation at June 30, 2011, Tier 1 capital would be \$129.1 billion and \$92.9 billion, respectively, and corresponding Tier 1 capital ratios would be 10.8% and 9.3%, respectively. At June 30, 2011, Chase Bank USA, N.A. had no trust preferred capital debt securities.

The Tier 1 common ratio is Tier 1 common divided by RWA. Tier 1 common capital is defined as Tier 1 capital less elements of capital not in the form of common equity, such as perpetual preferred stock, noncontrolling interests in subsidiaries, and trust preferred capital debt securities. Tier 1 common capital, a non-GAAP financial measure, is used by banking regulators, investors and analysts to assess and compare the quality and composition of the Firm's capital with the capital of other financial services companies. The Firm uses Tier 1 common along with the other capital measures to assess and monitor its capital position.

Risk-weighted assets (“RWA”) consist of on- and off-balance sheet assets that are assigned to one of several broad risk categories and weighted by factors representing their risk and potential for default. On-balance sheet assets are risk-weighted based on the perceived credit risk associated with the obligor or counterparty, the nature of any collateral, and the guarantor, if any. Off-balance sheet assets such as lending-related commitments, guarantees, derivatives and other off-balance sheet positions are risk-weighted by multiplying the contractual amount by the appropriate credit conversion factor to determine the on-balance sheet credit-equivalent amount, which is then risk-weighted based on the same factors used for on-balance sheet assets. RWA also incorporates a measure for the market risk related to applicable trading assets – debt and equity instruments, and foreign exchange and commodity derivatives. The resulting risk-weighted values for each of the risk categories are then aggregated to determine total RWA.

Included off-balance sheet RWA at June 30, 2011, of \$300.8 billion, \$287.5 billion and \$30 million, and at December 31, 2010, of \$282.9 billion, \$274.2 billion and \$31 million, for JPMorgan Chase, JPMorgan Chase Bank, N.A. and Chase Bank USA, N.A., respectively.

Adjusted average assets, for purposes of calculating the leverage ratio, include total quarterly average assets adjusted for unrealized gains/(losses) on securities, less deductions for disallowed goodwill and other intangible assets, investments in certain subsidiaries, and the total adjusted carrying value of nonfinancial equity investments that are subject to deductions from Tier 1 capital.

Tier 1 capital ratio is Tier 1 capital divided by RWA. Tier 1 capital consists of common stockholders’ equity, perpetual preferred stock, noncontrolling interests in subsidiaries and trust preferred capital debt securities, less goodwill and certain other adjustments.

Total capital ratio is Total capital divided by RWA. Total capital is Tier 1 capital plus Tier 2 capital. Tier 2 capital consists of preferred stock not qualifying as Tier 1, subordinated long-term debt and other instruments qualifying as Tier 2, and the aggregate allowance for credit losses up to a certain percentage of RWA.

Tier 1 leverage ratio is Tier 1 capital divided by adjusted quarterly average assets.

Asset and capital amounts for JPMorgan Chase’s banking subsidiaries reflect intercompany transactions; whereas the respective amounts for JPMorgan Chase reflect the elimination of intercompany transactions.

(j) As defined by the regulations issued by the Federal Reserve, OCC and FDIC.

(k) Represents requirements for banking subsidiaries pursuant to regulations issued under the FDIC Improvement Act. There is no Tier 1 leverage component in the definition of a well-capitalized bank holding company.

(l) The minimum Tier 1 leverage ratio for bank holding companies and banks is 3% or 4%, depending on factors specified in regulations issued by the Federal Reserve and OCC.

Note: Rating agencies allow measures of capital to be adjusted upward for deferred tax liabilities, which have resulted from both nontaxable business combinations and from tax-deductible goodwill. At June 30, 2011, and December 31, 2010, the Firm had deferred tax liabilities resulting from nontaxable business combinations totaling \$576 million and \$647 million, respectively; and deferred tax liabilities resulting from tax-deductible goodwill of \$2.1 billion and \$1.9 billion, respectively.

A reconciliation of Total stockholders' equity to Tier 1 common capital, Tier 1 capital and Total qualifying capital is presented in the table below.

Risk-based capital components and assets

(in millions)	June 30, 2011	December 31, 2010
Total stockholders' equity	\$182,879	\$176,106
Less: Preferred stock	7,800	7,800
Common stockholders' equity	175,079	168,306
Effect of certain items in accumulated other comprehensive income/(loss) excluded from Tier 1 common equity	(1,359)	(748)
Less: Goodwill ^(a)	46,826	46,915
Fair value DVA on derivative and structured note liabilities related to the Firm's credit quality	1,339	1,261
Investments in certain subsidiaries and other	995	1,032
Other intangible assets ^(a)	3,351	3,587
Tier 1 common	121,209	114,763
Preferred stock	7,800	7,800
Qualifying hybrid securities and noncontrolling interests ^(b)	19,871	19,887
Total Tier 1 capital	148,880	142,450
Long-term debt and other instruments qualifying as Tier 2	23,884	25,018
Qualifying allowance for credit losses	15,221	14,959
Adjustment for investments in certain subsidiaries and other	(86)	(211)
Total Tier 2 capital	39,019	39,766
Total qualifying capital	\$187,899	\$182,216
Risk-weighted assets	1,198,711	1,174,978
Total adjusted average assets	\$2,129,510	\$2,024,515

(a) Goodwill and other intangible assets are net of any associated deferred tax liabilities.

(b) Primarily includes trust preferred capital debt securities of certain business trusts.

The Firm's Tier 1 common capital was \$121.2 billion at June 30, 2011, compared with \$114.8 billion at December 31, 2010, an increase of \$6.4 billion. The increase was predominantly due to net income (adjusted for DVA) of \$10.9 billion and net issuances and commitments to issue common stock under the Firm's employee stock-based compensation plans of \$1.1 billion. The increase was partially offset by \$3.6 billion of repurchases of common stock and \$2.4 billion of dividends on common and preferred stock. The Firm's Tier 1 capital was \$148.9 billion at June 30, 2011, compared with \$142.5 billion at December 31, 2010, an increase of \$6.4 billion. The increase in Tier 1 capital reflected the increase in Tier 1 common. Additional information regarding the Firm's capital ratios and the federal regulatory capital standards to which it is subject is presented in Regulatory developments on pages 9–10 and Part II, Item 1A, Risk Factors on pages 192–193 of this Form 10-Q, and Note 29 on pages 273–274 of JPMorgan Chase's 2010 Annual Report.

Basel II

The minimum risk-based capital requirements adopted by the U.S. federal banking agencies follow the Capital Accord of the Basel Committee on Banking Supervision ("Basel I"). In 2004, the Basel Committee published a revision to the Accord ("Basel II"). The goal of the Basel II Framework is to provide more risk-sensitive regulatory capital calculations and promote enhanced risk management practices among large, internationally active banking organizations. U.S. banking regulators published a final Basel II rule in December 2007, which requires JPMorgan Chase to implement Basel II at the holding company level, as well as at certain of its key U.S. bank subsidiaries.

Prior to full implementation of the new Basel II Framework, JPMorgan Chase is required to complete a qualification period of four consecutive quarters during which it needs to demonstrate that it meets the requirements of the rule to the satisfaction of its primary U.S. banking regulators. JPMorgan Chase is currently in the qualification period and expects to be in compliance with all relevant Basel II rules within the established timelines. In addition, the Firm has adopted, and will continue to adopt, based on various established timelines, Basel II rules in certain non-U.S. jurisdictions, as required.

Basel III

In addition to the Basel II Framework, on December 16, 2010, the Basel Committee issued the final version of the Capital Accord, commonly referred to as “Basel III”, which revised Basel II by, among other things, narrowing the definition of capital, increasing capital requirements for specific exposures, introducing short-term liquidity coverage and term funding standards, and establishing an international leverage ratio. The Basel Committee also announced higher capital ratio requirements under Basel III, which provide that the common equity requirement will be increased to 7%, comprised of a minimum of 4.5% plus a 2.5% capital conservation buffer.

On June 25, 2011, the Basel Committee announced an agreement to require GSIBs to maintain higher Tier 1 common requirements ranging from 1% to 2.5%. In addition, the Basel Committee stated it intended to require certain GSIBs to maintain an additional Tier 1 common requirement of 1% under certain circumstances, to act as a disincentive for the applicable GSIB from taking actions that would further increase its systemic importance. On July 19, 2011, the Basel Committee published a proposal on the GSIB assessment methodology, which reflects an approach based on five broad categories: size; interconnectedness; lack of substitutability; cross-jurisdictional activity; and complexity. In addition, the U.S. federal banking agencies have published, for public comment, proposed risk-based capital floors pursuant to the requirements of the Dodd-Frank Act to establish a permanent Basel I floor under Basel II and Basel III capital calculations.

The Firm fully expects to be in compliance with the higher Basel III capital standards when they become effective on January 1, 2019, as well as any additional Dodd-Frank Act capital requirements when they are implemented. The Firm estimates that its Tier 1 common ratio under Basel III rules would be 7.6% as of June 30, 2011. Management considers this estimate, which is a non-GAAP financial measure, as a key measure to assess the Firm’s capital position in conjunction with its capital ratios under Basel I requirements, in order to enable management, investors and analysts to compare the Firm’s capital under the Basel III capital standards with similar estimates provided by other financial services companies.

Estimated Tier 1 common under Basel III rules

The following table presents a comparison of Tier 1 common under Basel I rules to an estimated Tier 1 common (a non-GAAP financial measure) under Basel III rules. Tier 1 common under Basel III includes additional adjustments and deductions not included in Basel I Tier 1 common, such as the inclusion of accumulated other comprehensive income (“AOCI”) related to available-for-sale (“AFS”) securities and defined benefit pension and other postretirement employee benefit plans, and the deduction of the Firm’s defined benefit pension fund assets.

(in millions, except ratios)	June 30, 2011
Tier 1 common under Basel I rules	\$121,209
Adjustments related to AFS securities and defined benefit pension and other postretirement employee benefit plans-related components of AOCI	1,362
Deduction for net defined benefit pension asset	(2,595)
All other adjustments	(26)
Estimated Tier 1 common under Basel III rules	\$119,950
Estimated risk-weighted assets under Basel III rules ^(a)	\$1,569,410
Estimated Tier 1 common ratio under Basel III rules: ^(b)	7.6 %

Key differences in the calculation of risk-weighted assets between Basel I and Basel III include: (a) Basel III credit risk RWA is based on risk-sensitive approaches which largely rely on the use of internal credit models and parameters whereas, Basel I RWA is based on fixed supervisory risk weights which vary only by counterparty type (a) and asset class; (b) Basel III market risk RWA reflects the new capital requirements related to trading assets and securitizations (released by the Basel Committee in July 2009), which include incremental capital requirements for stress VaR, correlation trading, and re-securitization positions; and (c) Basel III includes RWA for operational risk whereas, Basel I does not.

(b) The Tier 1 common ratio is Tier 1 common divided by RWA.

The Firm’s estimate of its Tier 1 common ratio under Basel III reflects its current understanding of the Basel III rules and the application of such rules to its businesses as currently conducted, and therefore excludes the impact of any

changes the Firm may make in the future to its businesses as a result of implementing the Basel III rules. The Firm's understanding of the Basel III rules are based on information currently published by the Basel Committee and U.S. federal banking agencies. The Firm intends to maintain its strong liquidity position in the future as the short-term liquidity coverage and term funding standards of the Basel III rules are implemented, in 2015 and 2018, respectively. In order to do so the Firm believes it may need to modify the liquidity profile of certain of its assets and liabilities. Implementation of the Basel III rules may also cause the Firm to increase prices on, or alter the types of, products it offers to its customers and clients.

The Basel III revisions governing liquidity and capital requirements are subject to prolonged observation and transition periods. The observation periods for both the liquidity coverage ratio and term funding standards begin in 2011, with implementation in 2015 and 2018, respectively. The transition period for banks to meet the revised Tier 1 common equity requirement will begin in 2013, with implementation on January 1, 2019. The additional capital requirements for GSIBs will be phased-in starting January 1, 2016, with full implementation on January 1, 2019. The Firm will continue to monitor the ongoing rule-making process to assess both the timing and the impact of Basel III on its businesses and financial condition.

Broker-dealer regulatory capital

JPMorgan Chase's principal U.S. broker-dealer subsidiaries are J.P. Morgan Securities LLC ("JPMorgan Securities") and J.P. Morgan Clearing Corp. ("JPMorgan Clearing"). JPMorgan Clearing is a subsidiary of JPMorgan Securities and provides clearing and settlement services. JPMorgan Securities and JPMorgan Clearing are each subject to Rule 15c3-1 under the Securities Exchange Act of 1934 (the "Net Capital Rule"). JPMorgan Securities and JPMorgan Clearing are also registered as futures commission merchants and subject to Rule 1.17 of the Commodity Futures Trading Commission ("CFTC"). Effective June 1, 2011, J.P. Morgan Futures Inc., a registered Futures Commission Merchant and a wholly owned subsidiary of JPMorgan Chase, merged with and into JPMorgan Securities. The merger created a combined Broker-Dealer / Futures Commission Merchant entity that provides capital and operational efficiencies.

JPMorgan Securities and JPMorgan Clearing have elected to compute their minimum net capital requirements in accordance with the "Alternative Net Capital Requirements" of the Net Capital Rule. At June 30, 2011, JPMorgan Securities' net capital, as defined by the Net Capital Rule, was \$11.3 billion, exceeding the minimum requirement by \$9.8 billion, and JPMorgan Clearing's net capital was \$7.0 billion, exceeding the minimum requirement by \$5.0 billion.

In addition to its minimum net capital requirement, JPMorgan Securities is required to hold tentative net capital in excess of \$1.0 billion and is also required to notify the U.S. Securities and Exchange Commission ("SEC") in the event that tentative net capital is less than \$5.0 billion, in accordance with the market and credit risk standards of Appendix E of the Net Capital Rule. As of June 30, 2011, JPMorgan Securities had tentative net capital in excess of the minimum and notification requirements.

Economic risk capital

JPMorgan Chase assesses its capital adequacy relative to the risks underlying its business activities, using internal risk-assessment methodologies. The Firm measures economic capital primarily based on four risk factors: credit, market, operational and private equity risk.

Economic risk capital (in billions)	Quarterly Averages		
	2Q11	4Q10	2Q10
Credit risk	\$47.6	\$50.9	\$48.1
Market risk	15.4	14.9	15.6
Operational risk	8.5	7.3	7.5
Private equity risk	7.3	6.9	6.0
Economic risk capital	78.8	80.0	77.2
Goodwill	48.8	48.8	48.3
Other ^(a)	46.5	38.0	33.6
Total common stockholders' equity	\$174.1	\$166.8	\$159.1

(a) Reflects additional capital required, in the Firm's view, to meet its regulatory and debt rating objectives.

Line of business equity

Equity for a line of business represents the amount the Firm believes the business would require if it were operating independently, incorporating sufficient capital to address regulatory capital requirements (including Basel III Tier 1 common capital requirements), economic risk measures and capital levels for similarly rated peers. Capital is also allocated to each line of business for, among other things, goodwill and other intangibles associated with acquisitions effected by the line of business. ROE is measured and internal targets for expected returns are established as key measures of a business segment's performance. Effective January 1, 2011, capital allocated to CS was reduced by \$2.0 billion, to \$13.0 billion, largely reflecting portfolio runoff and the improving risk profile of the business; capital allocated to TSS was increased by \$500 million, to \$7.0 billion, reflecting growth in the underlying business. The Firm continues to assess the level of capital required for each line of business, as well as the assumptions and methodologies used to allocate capital to the business segments, and further refinements may be implemented in future periods.

Capital actions

Dividends

On March 18, 2011, the Board of Directors increased the Firm's quarterly common stock dividend from \$0.05 to \$0.25 per share, effective with the dividend paid on April 30, 2011, to shareholders of record on April 6, 2011. The Firm's common stock dividend policy reflects JPMorgan Chase's earnings outlook; desired dividend payout ratio; capital objectives; and alternative investment opportunities. The Firm's current expectation is to return to a payout ratio of approximately 30% of normalized earnings over time. When management and the Board determine that it is appropriate to consider further increasing the common stock dividend, the Firm expects to review those plans with its regulators before taking action. For a further discussion of the Firm's dividend payments, see Dividends on page 106 of JPMorgan Chase's 2010 Annual Report.

Stock repurchases

On March 18, 2011, the Board of Directors approved a \$15.0 billion common equity repurchase program, of which \$8.0 billion is authorized for repurchase in 2011. The \$15.0 billion repurchase program supersedes a \$10.0 billion repurchase program approved in 2007. During the three and six months ended June 30, 2011, the Firm repurchased an aggregate of 80 million and 82 million shares, for \$3.5 billion and \$3.6 billion, at an average price per share of \$43.33 and \$43.39, respectively. As of June 30, 2011, \$11.4 billion of authorized repurchase capacity remained, of which \$4.4 billion of approved capacity remains for use during 2011. For the seven months ended July 31, 2011, the Firm has repurchased an aggregate of 99 million shares for \$4.3 billion at an average price per share of \$42.91.

Management and the Board will continue to assess and make decisions regarding alternatives for deploying capital, as appropriate, over the course of the year. Any planned use of the repurchase program beyond the repurchases approved for 2011 will be reviewed by the Firm with banking regulators before taking action. For a further discussion of the Firm's stock repurchase program, see Stock repurchases on page 106 of JPMorgan Chase's 2010 Annual Report. The Firm may, from time to time, enter into written trading plans under Rule 10b5-1 of the Securities Exchange Act of 1934 to facilitate repurchases in accordance with the repurchase program. A Rule 10b5-1 repurchase plan allows the Firm to repurchase its equity during periods when it would not otherwise be repurchasing common stock – for example, during internal trading “black-out periods.” All purchases under a Rule 10b5-1 plan must be made according to a predefined plan established when the Firm is not aware of material nonpublic information. For additional information regarding repurchases of the Firm's equity securities, see Part II, Item 2, Unregistered Sales of Equity Securities and Use of Proceeds, on pages 193–194 of this Form 10-Q.

RISK MANAGEMENT

Risk is an inherent part of JPMorgan Chase's business activities. The Firm's risk management framework and governance structure are intended to provide comprehensive controls and ongoing management of the major risks inherent in its business activities. The Firm employs a holistic approach to risk management to ensure the broad spectrum of risk types are considered in managing its business activities. The Firm's risk management framework is intended to create a culture of risk awareness and personal responsibility throughout the Firm where collaboration, discussion, escalation and sharing of information is encouraged.

The Firm's overall risk appetite is established in the context of the Firm's capital, earnings power, and diversified business model. The Firm employs a formalized risk appetite framework to clearly link risk appetite and return targets, controls and capital management. There are eight major types of risk identified in the business activities of the Firm: liquidity, credit, market, interest rate, operational, legal and reputation, fiduciary, and private equity risk. For further discussion of these risks, as well as how they are managed by the Firm, see Risk Management on pages 107–109 of JPMorgan Chase's 2010 Annual Report and the information below.

LIQUIDITY RISK MANAGEMENT

The following discussion of JPMorgan Chase's liquidity risk management framework highlights developments since December 31, 2010, and should be read in conjunction with pages 110–115 of JPMorgan Chase's 2010 Annual Report. The ability to maintain surplus levels of liquidity through economic cycles is crucial to financial services companies, particularly during periods of adverse conditions. The Firm's funding strategy is intended to ensure liquidity and diversity of funding sources to meet actual and contingent liabilities through both normal and stress periods.

JPMorgan Chase's primary sources of liquidity include a diversified deposit base, which was \$1,048.7 billion at June 30, 2011, and access to the equity capital markets and long-term unsecured and secured funding sources, including through asset securitizations and borrowings from Federal Home Loan Banks ("FHLBs"). Additionally, JPMorgan Chase maintains significant amounts of highly-liquid unencumbered assets. The Firm actively monitors the availability of funding in the wholesale markets across various geographic regions and in various currencies. The Firm's ability to generate funding from a broad range of sources in a variety of geographic locations and in a range of tenors is intended to enhance financial flexibility and limit funding concentration risk.

Management considers the Firm's liquidity position to be strong, based on its liquidity metrics as of June 30, 2011, and believes that the Firm's unsecured and secured funding capacity is sufficient to meet its on- and off-balance sheet obligations. The Firm was able to access the funding markets as needed during the six months ended June 30, 2011.

Governance

The Firm's governance process is designed to ensure that its liquidity position remains strong. The Asset-Liability Committee reviews and approves the Firm's liquidity policy and contingency funding plan. Corporate Treasury formulates and is responsible for executing the Firm's liquidity policy and contingency funding plan as well as measuring, monitoring, reporting and managing the Firm's liquidity risk profile. JPMorgan Chase centralizes the management of global funding and liquidity risk within Corporate Treasury to maximize liquidity access, minimize funding costs and enhance global identification and coordination of liquidity risk. This centralized approach involves frequent communication with the business segments, disciplined management of liquidity at the parent holding company, comprehensive market-based pricing of all assets and liabilities, continuous balance sheet monitoring, frequent stress testing of liquidity sources, and frequent reporting to and communication with senior management and the Board of Directors regarding the Firm's liquidity position.

Liquidity monitoring

The Firm employs a variety of metrics to monitor and manage liquidity. One set of analyses used by the Firm relates to the timing of liquidity sources versus liquidity uses (e.g., funding gap analysis and parent holding company funding, as discussed below). A second set of analyses focuses on measurements of the Firm's reliance on short-term unsecured funding as a percentage of total liabilities, as well as the relationship of short-term unsecured funding to highly-liquid assets, the deposits-to-loans ratio and other balance sheet measures.

The Firm performs regular liquidity stress tests as part of its liquidity monitoring activities. The purpose of the liquidity stress tests is intended to ensure sufficient liquidity for the Firm under both idiosyncratic and systemic market stress conditions. These scenarios measure the Firm's liquidity position across a full-year horizon by analyzing the net funding gaps resulting from contractual and contingent cash and collateral outflows versus the Firm's ability to generate additional liquidity by pledging or selling excess collateral and issuing unsecured debt. The scenarios are produced for the parent holding company and major bank subsidiaries as well as the Firm's major U.S. broker-dealer subsidiaries.

The Firm currently has liquidity in excess of its projected full-year liquidity needs under both the idiosyncratic stress scenario (which evaluates the Firm's net funding gap after a short-term ratings downgrade to A-2/P-2), as well as under the systemic market stress scenario (which evaluates the Firm's net funding gap during a period of severe market stress similar to market conditions in 2008 and assumes that the Firm is not uniquely stressed versus its peers).

Parent holding company

Liquidity monitoring of the parent holding company takes into consideration regulatory restrictions that limit the extent to which bank subsidiaries may extend credit to the parent holding company and other nonbank subsidiaries. Excess cash generated by parent holding company issuance activity is used to purchase liquid collateral through reverse repurchase agreements or is placed with both bank and nonbank subsidiaries in the form of deposits and

advances to satisfy a portion of subsidiary funding requirements. The Firm's liquidity management is also intended to ensure that its subsidiaries have the ability to generate replacement funding in the event the parent holding company requires repayment of the aforementioned deposits and advances.

The Firm closely monitors the ability of the parent holding company to meet all of its obligations with liquid sources of cash or cash equivalents for an extended period of time without access to the unsecured funding markets. The Firm targets pre-funding of parent holding company obligations for at least 12 months; however, due to conservative liquidity management actions taken by the Firm in the current environment, the current pre-funding of such obligations is significantly greater than target.

Global Liquidity Reserve

In addition to the parent holding company, the Firm maintains a significant amount of liquidity – primarily at its bank subsidiaries, but also at its nonbank subsidiaries. The Global Liquidity Reserve represents consolidated sources of available liquidity to the Firm, including cash on deposit at central banks, and cash proceeds reasonably expected to be received in secured financings of highly liquid, unencumbered securities – such as government-issued debt, government- and FDIC-guaranteed corporate debt, U.S. government agency debt, and agency mortgage-backed securities (“MBS”). The liquidity amount estimated to be realized from secured financings is based on management’s current judgment and assessment of the Firm’s ability to quickly raise secured financings. The Global Liquidity Reserve also includes the Firm’s borrowing capacity at various FHLBs, the Federal Reserve Bank discount window and various other central banks from collateral pledged by the Firm to such banks. Although considered as a source of available liquidity, the Firm does not view borrowing capacity at the Federal Reserve Bank discount window and various other central banks as a primary source of funding. As of June 30, 2011, the Global Liquidity Reserve was estimated to be approximately \$404 billion, compared with approximately \$262 billion at December 31, 2010. The increase in the Global Liquidity Reserve reflected a higher level of balances due from Federal Reserve Banks, predominantly driven by overall growth in wholesale clients’ cash management activities during the first six months of 2011 and an increase in inflows of short-term wholesale deposits from TSS clients toward the end of June 2011. In addition to the Global Liquidity Reserve, the Firm has significant amounts of other high-quality, marketable securities available to raise liquidity, such as corporate debt and equity securities.

Funding

Sources of funds

A key strength of the Firm is its diversified deposit franchise, through the RFS, CB, TSS and AM lines of business, which provides a stable source of funding and decreases reliance on the wholesale markets. As of June 30, 2011, total deposits for the Firm were \$1,048.7 billion, compared with \$930.4 billion at December 31, 2010. Average total deposits for the Firm were \$979.9 billion and \$878.6 billion for the three months ended June 30, 2011 and 2010, respectively, and were \$955.3 billion and \$878.0 billion for the six months ended June 30, 2011 and 2010, respectively. The Firm typically experiences higher customer deposit inflows at period-ends. A significant portion of the Firm’s deposits are retail deposits (36% and 40% at June 30, 2011, and December 31, 2010, respectively), which are considered particularly stable as they are less sensitive to interest rate changes or market volatility. A significant portion of the Firm’s wholesale deposits are also considered to be stable sources of funding due to the nature of the relationships from which they are generated, particularly customers’ operating service relationships with the Firm. As of June 30, 2011, the Firm’s deposits-to-loans ratio was 152%, compared with 134% at December 31, 2010. For further discussions of deposit and liability balance trends, see the discussion of the results for the Firm’s business segments and the Balance Sheet Analysis on pages 17–48 and 49–51, respectively, of this Form 10-Q. Additional sources of funding include a variety of unsecured and secured short-term and long-term instruments. Short-term unsecured funding sources include federal funds and Eurodollars purchased, certificates of deposit, time deposits, commercial paper and other borrowed funds. Long-term unsecured funding sources include long-term debt, preferred stock and common stock.

The Firm’s short-term secured sources of funding consist of securities loaned or sold under agreements to repurchase and borrowings from the Chicago, Pittsburgh and San Francisco FHLBs. Secured long-term funding sources include asset-backed securitizations, and borrowings from the Chicago, Pittsburgh and San Francisco FHLBs.

Funding markets are evaluated on an ongoing basis to achieve an appropriate global balance of unsecured and secured funding at favorable rates.

Short-term funding

The Firm’s reliance on short-term unsecured funding sources is limited. Short-term unsecured funding sources include federal funds and Eurodollars purchased, which represent overnight funds; certificates of deposit; time deposits; commercial paper, which is generally issued in amounts not less than \$100,000 and with maturities of 270 days or less; and other borrowed funds, which consist of demand notes, term federal funds purchased, and various other borrowings that generally have maturities of one year or less.

Total commercial paper liabilities were \$51.2 billion as of June 30, 2011, compared with \$35.4 billion as of December 31, 2010. However, of those totals, \$43.5 billion and \$29.2 billion as of June 30, 2011, and December 31, 2010, respectively, originated from deposits that customers chose to sweep into commercial paper liabilities as a cash management product offered by the Firm. Therefore, commercial paper liabilities sourced from wholesale funding markets were \$7.7 billion as of June 30, 2011, compared with \$6.2 billion as of December 31, 2010; in addition, the average balance of commercial paper liabilities sourced from wholesale funding markets were \$7.4 billion and \$7.9 billion for the three and six months ended June 30, 2011, respectively.

Securities loaned or sold under agreements to repurchase, generally mature between one day and three months, are secured predominantly by high-quality securities collateral, including government-issued debt, agency debt and agency MBS. The balances of securities loaned or sold under agreements to repurchase, which constitute a significant portion of the federal funds purchased and securities loaned or sold under repurchase agreements, was \$252.6 billion as of June 30, 2011, compared with \$273.3 billion

as of December 31, 2010; the average balance was \$277.4 billion and \$274.3 billion for the three and six months ended June 30, 2011, respectively. At June 30, 2011, the decline in the balance, compared with the balance at December 31, 2010, and the average balances for the three and six months ended June 30, 2011, was driven by lower financing of the Firm's trading assets as well as lower client financing balances. The balances associated with securities loaned or sold under agreements to repurchase fluctuate over time due to customers' investment and financing activities; the Firm's demand for financing; the Firm's matched book activity; the ongoing management of the mix of the Firm's liabilities, including its secured and unsecured financing (for both the investment and trading portfolios); and other market and portfolio factors. For additional information, see the Balance Sheet Analysis on pages 49–51, Note 12 on page 133 and Note 18 on page 164 of this Form 10-Q.

Total other borrowed funds was \$30.2 billion as of June 30, 2011, compared with \$34.3 billion as of December 31, 2010; the average balance of other borrowed funds was \$36.9 billion and \$35.2 billion for the three and six months ended June 30, 2011, respectively. At June 30, 2011, the decline in the balance, compared with the balance at December 31, 2010, and the average balances for the three and six months ended June 30, 2011, was predominantly driven by lower financing of the Firm's trading assets, and maturities of short-term unsecured bank notes and short-term FHLB advances.

Long-term funding and issuance

During the three months ended June 30, 2011, the Firm issued \$18.8 billion of long-term debt, including \$12.9 billion of senior notes issued in the U.S. market, \$1.4 billion of senior notes issued in non-U.S. markets, and \$4.5 billion of IB structured notes. In addition, in July 2011, the Firm issued \$2.3 billion of senior notes in the U.S. market. During the three months ended June 30, 2010, the Firm issued \$7.1 billion of long-term debt, including \$1.3 billion of senior notes issued in U.S. markets, \$1.5 billion of trust preferred capital debt securities, and \$4.3 billion of IB structured notes. During the three months ended June 30, 2011, \$11.4 billion of long-term debt matured or was redeemed, including \$4.5 billion of IB structured notes. During the three months ended June 30, 2010, \$16.2 billion of long-term debt matured or was redeemed, including \$5.4 billion of IB structured notes.

During the six months ended June 30, 2011, the Firm issued \$31.8 billion of long-term debt, including \$19.9 billion of senior notes issued in the U.S. market, \$4.1 billion of senior notes issued in non-U.S. markets, and \$7.8 billion of IB structured notes. During the six months ended June 30, 2010, the Firm issued \$18.0 billion of long-term debt, including \$6.9 billion of senior notes issued in U.S. markets, \$904 million of senior notes issued in non-U.S. markets, \$1.5 billion of trust preferred capital debt securities and \$8.7 billion of IB structured notes. During the six months ended June 30, 2011, \$29.5 billion of long-term debt matured or was redeemed, including \$10.1 billion of IB structured notes. During the six months ended June 30, 2010, \$30.3 billion of long-term debt matured or was redeemed, including \$12.8 billion of IB structured notes.

In addition to the unsecured long-term funding and issuances discussed above, the Firm securitizes consumer credit card loans, residential mortgages, auto loans and student loans for funding purposes. During the three months ended June 30, 2011, the Firm securitized \$1.0 billion of credit card loans, and \$3.2 billion of loan securitizations matured or were redeemed, including \$3.0 billion of credit card loan securitizations, \$39 million of residential mortgage loan securitizations and \$77 million of student loan securitizations. During the three months ended June 30, 2010, the Firm did not securitize any loans through consolidated or nonconsolidated securitization trusts for funding purposes, and \$6.8 billion of loan securitizations matured or were redeemed, including \$6.6 billion of credit card loan securitizations, \$47 million of residential mortgage loan securitizations, \$72 million of student loan securitizations, and \$36 million of auto loan securitizations.

During the six months ended June 30, 2011, the Firm securitized \$1.0 billion of credit card loans, and \$9.8 billion of loan securitizations matured or were redeemed, including \$9.6 billion of credit card loan securitizations, \$83 million of residential mortgage loan securitizations and \$153 million of student loan securitizations. During the six months ended June 30, 2010, the Firm did not securitize any loans through consolidated or nonconsolidated securitization trusts for funding purposes, and \$13.5 billion of loan securitizations matured or were redeemed, including \$13.2 billion of credit card loan securitizations, \$90 million of residential mortgage loan securitizations, \$156 million of student loan securitizations, and \$75 million of auto loan securitizations.

In addition, the Firm's wholesale businesses securitize loans for client-driven transactions and those client-driven loan securitizations are not considered to be a source of funding for the Firm. For the three months ended June 30, 2011 and 2010, \$265 million and \$352 million, respectively, of client-driven loan securitizations matured or were redeemed. For the six months ended June 30, 2011 and 2010, \$277 million and \$1.1 billion, respectively, of client-driven loan securitizations matured or were redeemed. For further discussion of loan securitizations, see Note 16 on pages 159–163 in this Form 10-Q.

During the three months ended June 30, 2011, the Firm did not borrow from FHLBs and there were \$5 million of maturities. For the three months ended June 30, 2010, the Firm borrowed \$1.0 billion from FHLBs, which were more than offset by \$5.0 billion of maturities. During the six months ended June 30, 2011, the Firm borrowed \$4.0 billion from FHLBs, which were partially offset by \$2.5 billion of maturities. For the six months ended June 30, 2010, the Firm borrowed \$2.5 billion from FHLBs, which were more than offset by \$13.5 billion of maturities.

Cash flows

Cash and due from banks was \$30.5 billion and \$32.8 billion at June 30, 2011 and 2010, respectively. These balances increased by \$2.9 billion from December 31, 2010 and \$6.6 billion from December 31, 2009, respectively. The following discussion highlights the major activities and transactions that affected JPMorgan Chase's cash flows for the six months ended June 30, 2011 and June 30, 2010, respectively.

Cash flows from operating activities

JPMorgan Chase's operating assets and liabilities support the Firm's capital markets and lending activities, including the origination or purchase of loans initially designated as held-for-sale. Operating assets and liabilities can vary significantly in the normal course of business due to the amount and timing of cash flows, which are affected by client-driven and risk management activities, and market conditions. Management believes cash flows from operations, available cash balances and the Firm's ability to generate cash through short- and long-term borrowings are sufficient to fund the Firm's operating liquidity needs.

For the six months ended June 30, 2011, net cash provided by operating activities was \$58.7 billion. This resulted from a decrease in trading assets – debt and equity instruments, driven by client market-making activity in IB, primarily due to declines in U.S. government agency mortgage-backed securities and equity securities, partially offset by an increase in non-U.S. government debt securities; a decrease in trading assets – derivative receivables largely due to a reduction in foreign exchange derivatives partially offset by an increase in equity derivatives from IB's market-making activity; and an increase in accounts payable and other liabilities largely due to higher IB Prime Services customer balances. Partially offsetting these cash proceeds were a decrease in trading liabilities – derivatives payable largely due to the aforementioned reduction of the foreign exchange derivatives partially offset by the increase in equity derivatives; and an increase in accrued interest and accounts receivable largely reflecting higher receivables from securities transactions pending settlement. Net cash generated from operating activities was higher than net income largely as a result of adjustments for noncash items such as the provision for credit losses, depreciation and amortization, and stock-based compensation. Additionally, cash provided by proceeds from sales and paydowns of loans originated or purchased with an initial intent to sell was slightly higher than cash used to acquire such loans, and also reflected a higher level of activity over the prior-year period.

For the six months ended June 30, 2010, net cash provided by operating activities was \$45.7 billion, primarily driven by an increase in trading liabilities, reflecting an increase in business activity in markets outside of the U.S., mainly Asia/Pacific, in the first quarter of 2010, partially offset by a decrease in trading assets driven by lower client flows as a result of unfavorable financial markets in the second quarter of 2010. Also, net cash generated from operating activities was higher than net income, largely as a result of adjustments for non-cash items such as the provision for credit losses, stock-based compensation, and depreciation and amortization. Proceeds from sales and paydowns of loans originated or purchased with an initial intent to sell were higher than cash used to acquire such loans.

Cash flows from investing activities

The Firm's investing activities predominantly include loans originated to be held for investment, the AFS securities portfolio and other short-term interest-earning assets. For the six months ended June 30, 2011, net cash of \$145.8 billion was used in investing activities. This resulted from a significant increase in deposits with banks reflecting a higher level of deposit balances at Federal Reserve Banks predominantly the result of an overall growth in wholesale clients' cash management activities in the first six months of 2011, as well as an increase in inflows of short-term wholesale deposits from TSS clients toward the end of June 2011, and an increase in wholesale loans reflecting growth in client activity in all of the Firm's wholesale businesses. Partially offsetting these cash outflows were a decline in securities purchased under resale agreements, predominantly in IB, reflecting lower client financing activity; a decrease in credit card loans in CS reflecting lower seasonal balances, higher repayment rates, continued runoff of the Washington Mutual portfolio and the sale of the Kohl's portfolio; and a decrease in loans in RFS reflecting paydowns, portfolio runoff and repayments.

For the six months ended June 30, 2010, net cash of \$73.7 billion was provided by investing activities. This resulted from a decrease in deposits with banks largely due to a decline in deposits placed with the Federal Reserve Bank and lower interbank lending as market stress had gradually eased since the end of 2009; a net decrease in the loan portfolio, driven by a decline in credit card loans due to the runoff of the Washington Mutual portfolio and a decrease

in lower-yielding promotional loans; continued runoff of the residential real estate portfolios in RFS; and repayments and loan sales in IB and continued low client demand for wholesale loans; and proceeds from sales and maturities of AFS securities used in the Firm's interest rate risk management activities being higher than cash used to acquire such securities.

Cash flows from financing activities

The Firm's financing activities primarily reflect cash flows related to taking customer deposits, and issuing long-term debt as well as preferred and common stock. For the six months ended June 30, 2011, net cash provided by financing activities was \$89.3 billion. This was largely driven by a significant increase in deposits predominantly as a result of an overall growth in wholesale clients' cash management activities during the first six months of 2011, an increase in inflows of short-term wholesale deposits from TSS clients toward the end of June 2011, and growth in the number of clients and higher balances in CB, AM and RFS (the RFS deposits were net of the attrition related to inactive and low-balance Washington Mutual accounts); an increase in commercial

paper and other borrowed funds due to growth in the volume of liability balances in sweep accounts related to TSS's cash management product; and a modest incremental increase in commercial paper issued in wholesale funding markets. Cash was used to reduce securities sold under repurchase agreements, predominantly in IB, due to lower financings of the Firm's trading assets as well as lower client financing balances; for net repayments of long-term borrowings, including a decline in long-term beneficial interests issued by consolidated VIEs due to maturities of Firm-sponsored credit card securitization transactions; for repurchases of common stock and payments of cash dividends on common and preferred stock.

In the first six months of 2010, net cash used in financing activities was \$112.3 billion. This resulted from a decline in deposits associated with wholesale funding activities reflecting the Firm's lower funding needs; a decline in TSS deposits reflecting the normalization of deposit levels, offset partially by net inflows from existing customers and new business in AM, CB and RFS; net repayment of long-term borrowings, including a decline in long-term beneficial interests issued by consolidated VIEs due to maturities of Firm-sponsored credit card securitization transactions and a decline in long-term advances from FHLBs due to maturities; payments of cash dividends; and repurchases of common stock. Additionally, cash was used as a result of a decline in securities loaned or sold under repurchase agreements largely due to reduced funding requirements associated with lower AFS securities in Corporate and reduced short-term funding requirements in IB.

Credit ratings

The cost and availability of financing are influenced by credit ratings. Reductions in these ratings could have an adverse effect on the Firm's access to liquidity sources, increase the cost of funds, trigger additional collateral or funding requirements and decrease the number of investors and counterparties willing to lend to the Firm.

Additionally, the Firm's funding requirements for VIEs and other third-party commitments may be adversely affected by a decline in credit ratings. For additional information on the impact of a credit ratings downgrade on the funding requirements for VIEs, and on derivatives and collateral agreements, see Special-purpose entities on page 52, and Note 5 on pages 117–124, respectively, of this Form 10-Q.

Critical factors in maintaining high credit ratings include a stable and diverse earnings stream, strong capital ratios, strong credit quality and risk management controls, diverse funding sources, and disciplined liquidity monitoring procedures.

The credit ratings of the parent holding company and each of the Firm's significant banking subsidiaries as of June 30, 2011, were as follows.

	Short-term debt			Senior long-term debt		
	Moody's	S&P	Fitch	Moody's	S&P	Fitch
JPMorgan Chase & Co.	P-1	A-1	F1+	Aa3	A+	AA-
JPMorgan Chase Bank, N.A.	P-1	A-1+	F1+	Aa1	AA-	AA-
Chase Bank USA, N.A.	P-1	A-1+	F1+	Aa1	AA-	AA-

The senior unsecured ratings from Moody's, S&P and Fitch on JPMorgan Chase and its principal bank subsidiaries remained unchanged at June 30, 2011, from December 31, 2010. At June 30, 2011, Moody's outlook was negative, while S&P's and Fitch's outlook was stable.

On July 18, 2011, Moody's placed the long-term debt ratings of the Firm and its subsidiaries under review for possible downgrade. The Firm's current long-term debt ratings by Moody's reflect "support uplift" above the Firm's stand-alone financial strength due to Moody's assessment of the likelihood of U.S. government support. Moody's action was directly related to Moody's placing the U.S. government's Aaa rating on review for possible downgrade on July 13, 2011. Moody's indicated that the action did not reflect a change to Moody's opinion of the Firm's stand-alone financial strength. The short-term debt ratings of the Firm and its subsidiaries were affirmed and were not affected by the action. Subsequently, on August 3, 2011, Moody's confirmed the long-term debt ratings of the Firm and its subsidiaries at their current levels and assigned a negative outlook on the ratings. The rating confirmation was directly related to Moody's confirmation on August 2, 2011, of the Aaa rating assigned to the U.S. government.

If the Firm's senior long-term debt ratings were downgraded by one notch or two notches, the Firm believes its cost of funds would increase; however, the Firm's ability to fund itself would not be impacted. JPMorgan Chase's unsecured

debt does not contain requirements that would call for an acceleration of payments, maturities or changes in the structure of the existing debt, provide any limitations on future borrowings or require additional collateral, based on unfavorable changes in the Firm's credit ratings, financial ratios, earnings, or stock price.

Several rating agencies have announced that they will be evaluating the effects of the financial regulatory reform legislation in order to determine the extent, if any, to which financial institutions, including the Firm, may be negatively impacted. There is no assurance the Firm's credit ratings will not be downgraded in the future as a result of any such reviews.

CREDIT PORTFOLIO

For a further discussion on the Firm's credit risk management framework, see pages 116–118 of JP Morgan Chase's 2010 Annual Report.

The following table presents JPMorgan Chase's credit portfolio as of June 30, 2011, and December 31, 2010. Total credit exposure was \$1.8 trillion at June 30, 2011, an increase of \$711 million from December 31, 2010, reflecting increases in the wholesale portfolio of \$37.4 billion offset by decreases in the consumer portfolio of \$36.7 billion. During the first six months of 2011, increases in lending-related commitments of \$7.3 billion were offset by decreases in loans and derivative receivables of \$3.2 billion and \$3.1 billion, respectively.

The Firm provided credit to and raised capital of more than \$990 billion for its clients during the first six months of 2011. The Firm also originated mortgages to more than 360,000 people; provided credit cards to approximately 4.6 million people; lent or increased credit to more than 16,800 small businesses; lent to more than 800 not-for-profit and government entities, including states, municipalities, hospitals and universities; extended or increased loan limits to approximately 3,000 middle market companies; and lent to or raised capital for more than 5,000 other corporations. The Firm is the #1 Small Business Administration lender in the U.S. with more loans made than any other lender. In 2009 and 2010, the Firm lent more than \$7 billion and \$10 billion, respectively, to small businesses, and has committed to lend at least \$12 billion in 2011. The Firm remains committed to helping homeowners and preventing foreclosures. Since the beginning of 2009, the Firm has offered 1,177,000 trial modifications to struggling homeowners.

In the table below, reported loans include loans retained (i.e., held-for-investment); loans held-for-sale (which are carried at the lower of cost or fair value, with changes in value recorded in noninterest revenue); and loans accounted for at fair value. For additional information on the Firm's loans and derivative receivables, including the Firm's accounting policies, see Note 13 and Note 5 on pages 134–148 and 117–124, respectively, of this Form 10-Q, and Note 14 and Note 6 on pages 220–238 and 191–199, respectively, of JPMorgan Chase's 2010 Annual Report. Average retained loan balances are used for net charge-off rate calculations.

Liquid securities and other cash collateral held against derivatives	(16,506)	(16,486)	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA

Receivables from customers represents primarily margin loans to prime and retail brokerage customers, which are included in accrued interest and accounts receivable on the Consolidated Balance Sheets. Interests in purchased (a) receivables represents an ownership interest in cash flows of a pool of receivables transferred by a third-party seller into a bankruptcy-remote entity, generally a trust, which are included in other assets on the Consolidated Balance Sheets.

(b) The amounts in nonperforming represent commitments that are risk rated as nonaccrual.

Represents the net notional amount of protection purchased and sold of single-name and portfolio credit derivatives used to manage both performing and non-performing credit exposures; these derivatives do not qualify for hedge (c) accounting under U.S. GAAP. For additional information, see Credit derivatives on pages 74–75 and Note 5 on pages 117–124 of this Form 10-Q.

At June 30, 2011, and December 31, 2010, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of \$9.1 billion and \$9.4 billion, respectively, that are 90 or more days past due; (2) real estate owned insured by U.S. government agencies of \$2.4 billion and \$1.9 billion, respectively; and (3) student loans insured by U.S. government agencies under the FFELP of \$558 million and \$625 million, respectively, that are 90 (d) or more days past due. These amounts were excluded as reimbursement of insured amounts is proceeding normally. In addition, the Firm's policy is generally to exempt credit card loans from being placed on nonaccrual status as permitted by regulatory guidance issued by the Federal Financial Institutions Examination Council ("FFIEC"). Credit card loans are charged-off by the end of the month in which the account becomes 180 days past due or within 60 days from receiving notification about a specified event (e.g., bankruptcy of the borrower), whichever is earlier.

(e) Excludes PCI loans acquired as part of the Washington Mutual transaction, which are accounted for on a pool basis. Since each pool is accounted for as a

single asset with a single composite interest rate and an aggregate expectation of cash flows, the past due status of the pools, or that of individual loans within the pools, is not meaningful. Because the Firm is recognizing interest income on each pool of loans, they are all considered to be performing.

(f) At June 30, 2011, and December 31, 2010, total nonaccrual loans represented 1.73% and 2.14% of total loans .

For the three months ended June 30, 2011, and 2010, net charge-off rates were calculated using average retained loans of \$680.1 billion and \$699.2 billion, respectively. These average retained loans include average PCI loans of (g) \$69.9 billion and \$78.1 billion, respectively. Excluding these PCI loans, the Firm's total charge-off rates would have been 2.04% and 3.69%, respectively.

For the six months ended June 30, 2011, and 2010, net charge-off rates were calculated using average retained loans of \$680.1 billion and \$708.8 billion, respectively. These average retained loans include average PCI loans of (h) \$70.7 billion and \$79.2 billion, respectively. Excluding these PCI loans, the Firm's total charge-off rates would have been 2.26% and 4.36%, respectively.

WHOLESALE CREDIT PORTFOLIO

As of June 30, 2011, wholesale exposure (IB, CB, TSS and AM) increased by \$37.4 billion from December 31, 2010. The overall increase was primarily driven by increases of \$21.2 billion in loans and \$19.6 billion in lending-related commitments, partly offset by a decrease of \$3.1 billion in derivative receivables. The growth in wholesale credit exposure represented increased client activity across all businesses and all regions. Effective January 1, 2011, the commercial card credit portfolio (composed of approximately \$5.3 billion of lending-related commitments and \$1.2 billion of loans) that was previously in TSS was transferred to CS.

Wholesale credit portfolio

Receivables from customers represents primarily margin loans to prime and retail brokerage customers, which are included in accrued interests and accounts receivable on the Consolidated Balance Sheets. Interests in purchased (a) receivables represent ownership interests in cash flows of a pool of receivables transferred by third-party sellers into bankruptcy-remote entities, generally trusts, which are included in other assets on the Consolidated Balance Sheets.

(b) The amounts in nonperforming represent commitments that are risk rated as nonaccrual.

Represents the net notional amount of protection purchased and sold of single-name and portfolio credit derivatives used to manage both performing and nonperforming credit exposures; these derivatives do not qualify for hedge (c) accounting under U.S. GAAP. For additional information, see Credit derivatives on pages 74–75, and Note 5 on pages 117–124 of this Form 10-Q.

(d) Excludes assets acquired in loan satisfactions.

The following table presents summaries of the maturity and ratings profiles of the wholesale portfolio as of June 30, 2011, and December 31, 2010. The ratings scale is based on the Firm's internal risk ratings, which generally correspond to the ratings as defined by S&P and Moody's. Also included in this table is the notional value of net credit derivative hedges; the counterparties to these hedges are predominantly investment-grade ("IG") banks and finance companies.

Wholesale credit exposure – maturity and ratings profile

June 30, 2011 (in millions, except ratios)	Maturity profile ^(e)				Ratings profile			
	Due in 1 year or less	Due after 1 year through 5 years	Due after 5 years	Total	Investment-grade AAA/Aaa to BBB-/Baa3	Noninvestment-grade BB+/Ba1 & below	Total	Total % of IG

(a) Represents the fair value of derivative receivables as reported on the Consolidated Balance Sheets.

(b) Loans held-for-sale and loans at fair value relate primarily to syndicated loans and loans transferred from the retained portfolio.

(c) From a credit risk perspective, maturity and ratings profiles are not meaningful.

Represents the net notional amounts of protection purchased and sold of single-name and portfolio credit

(d) derivatives used to manage the credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP.

The maturity profiles of retained loans and lending-related commitments are based on the remaining contractual maturity. The maturity profiles of derivative receivables are based on the maturity profile of average exposure. For further discussion of average exposure, see Derivative receivables MTM on pages 73–74 of this Form 10-Q.

Receivables from customers of \$32.5 billion at both June 30, 2011, and December 31, 2010, primarily representing margin loans to prime and retail brokerage clients and are included in the previous tables. These margin loans are collateralized through a pledge of assets maintained in clients' brokerage accounts and are subject to daily minimum collateral requirements. In the event that the collateral value decreases, a maintenance margin call is made to the client to provide additional collateral into the account. If additional collateral is not provided by the client, the client's position may be liquidated by the Firm to meet the minimum collateral requirements.

Wholesale credit exposure – selected industry exposures

The Firm focuses on the management and diversification of its industry exposures, with particular attention paid to industries with actual or potential credit concerns. Exposures deemed criticized generally represent a ratings profile similar to a rating of “CCC+”/“Caa1” and lower, as defined by S&P and Moody’s, respectively. The total criticized component of the portfolio, excluding loans held-for-sale and loans at fair value, decreased to \$18.3 billion at June 30, 2011, from \$22.4 billion at December 31, 2010. The decrease was primarily related to net repayments and loan sales. Below are summaries of the top 25 industry exposures as of June 30, 2011, and December 31, 2010.

As of or for the six months ended June 30, 2011			Non-investment grade			30 days or more past due and accruing loans	Year-to-date net charge-offs/ recoveries	Credit derivative hedges ^(e)	Liquid securities and other cash collateral held against derivative receivables

- (a) All industry rankings are based on exposure at June 30, 2011. The industry rankings presented in the table as of December 31, 2010, are based on the industry rankings of the corresponding exposures at June 30, 2011, not actual rankings of such exposures at December 31, 2010 ..

- (b) In addition to the credit risk exposure to States and municipal governments at June 30, 2011, and December 31, 2010, noted above, the Firm had \$8.6 billion and \$14.0 billion, respectively, of trading securities and \$11.6 billion and \$11.6 billion, respectively, of available-for-sale securities issued by State and municipal governments. For further information, see Note 5 and Note 11 on pages 117–124 and 128–132, respectively, of this Form 10-Q.

- (c) For more information on exposures to SPEs within All other, including liquidity facilities to nonconsolidated municipal bond VIEs, see Note 15 on pages 151–159 of this Form 10-Q.

- (d) Credit exposure is net of risk participations and excludes the benefit of credit derivative hedges and collateral held against derivative receivables or loans.

- (e) Represents the net notional amounts of protection purchased and sold of single-name and portfolio credit derivatives used to manage the credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP.

Edgar Filing: J P MORGAN CHASE & CO - Form 10-Q

The following table presents the geographic distribution of wholesale credit exposure including nonperforming assets and past due loans as of June 30, 2011, and December 31, 2010. The geographic distribution of the wholesale portfolio is determined based predominantly on the domicile of the borrower.

June 30, 2011 (in millions)	Credit exposure				Nonperforming				30 days or more past due and accruing loans

Total	\$227,633	\$346,079	\$80,481	\$687,125	\$6,006	\$34	\$1,005	\$7,045	\$321	\$1,852
-------	-----------	-----------	----------	-----------	---------	------	---------	---------	-------	---------

At June 30, 2011, and December 31, 2010, the Firm held an allowance for loan losses of \$731 million and \$1.6 billion, respectively, related to nonaccrual retained loans resulting in allowance coverage ratios of 22% and 29%, respectively. Wholesale nonaccrual loans represented 1.44% and 2.64% of total wholesale loans at June 30, 2011, and December 31, 2010, respectively.

Loans

In the normal course of business, the Firm provides loans to a variety of wholesale customers, from large corporate and institutional clients to high-net-worth individuals. For further discussion on loans, including information on credit quality indicators, see Note 13 on pages 134–148 of this Form 10-Q.

Retained wholesale loans were \$244.2 billion at June 30, 2011, compared with \$222.5 billion at December 31, 2010.

The \$21.7 billion increase was primarily related to increased client activity.

The Firm actively manages wholesale credit exposure through sales of loans and lending-related commitments.

During the first six months of 2011, the Firm sold \$2.8 billion of loans and commitments, recognizing net gains of \$16 million. During the first six months of 2010, the Firm sold \$4.9 billion of loans and commitments, recognizing net gains of \$31 million. These results included gains or losses on sales of nonaccrual loans, if any, as discussed below.

These sale activities are not related to the Firm's securitization activities. For further discussion of securitization activity, see Liquidity Risk Management and Note 15 on pages 62–66 and 151–159 respectively, of this Form 10-Q.

The following table presents the change in the nonaccrual loan portfolio for the six months ended June 30, 2011 and 2010.

Wholesale nonaccrual loan activity (in millions)	Six months ended June 30,	
	2011	2010
Beginning balance	\$6,006	\$6,904
Additions	1,311	4,150
Reductions:		
Paydowns and other	1,974	2,857
Gross charge-offs	377	1,162
Returned to performing status	489	113
Sales	901	1,262
Total reductions	3,741	5,394
Net additions/(reductions)	(2,430)	(1,244)
Ending balance	\$3,576	\$5,660

Nonaccrual wholesale loans decreased by \$2.4 billion from December 31, 2010, primarily reflecting net repayments and loan sales.

The following table presents net charge-offs, which are defined as gross charge-offs less recoveries, for the three and six months ended June 30, 2011 and 2010. The amounts in the table below do not include gains or losses from sales of nonaccrual loans.

Wholesale net charge-offs (in millions, except ratios)	Three months ended June 30,		Six months ended June 30,	
	2011	2010	2011	2010
Loans – reported				
Average loans retained	\$237,511	\$209,016	\$232,058	\$210,300
Net charge-offs	80	231	245	1,190
Average annual net charge-off ratio	0.14	% 0.44	% 0.21	% 1.14

Derivative contracts

In the normal course of business, the Firm uses derivative instruments predominantly for market-making activity.

Derivatives enable customers and the Firm to manage exposures to fluctuations in interest rates, currencies and other markets. The Firm also uses derivative instruments to manage its credit exposure. For further discussion of derivative contracts, see Note 5 on page 117–124 of this Form 10-Q.

The following tables summarize the net derivative receivables MTM for the periods presented.

Derivative receivables MTM

(in millions)	June 30, 2011	December 31, 2010
Interest rate	\$32,911	\$32,555
Credit derivatives	6,198	7,725
Foreign exchange	19,898	25,858
Equity	7,084	4,204
Commodity	11,292	10,139
Total, net of cash collateral	77,383	80,481
Liquid securities and other cash collateral held against derivative receivables	(16,506)	(16,486)
Total, net of all collateral	\$60,877	\$63,995

Derivative receivables reported on the Consolidated Balance Sheets were \$77.4 billion and \$80.5 billion at June 30, 2011, and December 31, 2010, respectively. These represent the fair value (i.e., MTM) of the derivative contracts after giving effect to legally enforceable master netting agreements, cash collateral held by the Firm and the CVA.

However, in management's view, the appropriate measure of current credit risk should also reflect additional liquid securities and other cash collateral held by the Firm of \$16.5 billion at both June 30, 2011, and December 31, 2010, as shown in the table above. Derivative receivables decreased from December 31, 2010, largely due to a reduction in foreign exchange derivative balances, partially offset by an increase in equity derivatives, from IB's market-making

activity.

73

The Firm also holds additional collateral delivered by clients at the initiation of transactions, as well as collateral related to contracts that have a non-daily call frequency and collateral that the Firm has agreed to return but has not yet settled as of the reporting date. Though this collateral does not reduce the balances noted in the table above, it is available as security against potential exposure that could arise should the MTM of the client's derivative transactions move in the Firm's favor. As of June 30, 2011, and December 31, 2010, the Firm held \$22.3 billion and \$18.0 billion, respectively, of this additional collateral. The derivative receivables MTM, net of all collateral, also do not include other credit enhancements, such as letters of credit. For additional information on the Firm's use of collateral agreements, see Note 5 on pages 117–124 of this form 10-Q.

The following table summarizes the ratings profile of the Firm's derivative receivables MTM, net of other liquid securities collateral, for the dates indicated.

Ratings profile of derivative receivables MTM

Rating equivalent (in millions, except ratios)	June 30, 2011		December 31, 2010	
	Exposure net of all collateral	% of exposure net of all collateral	Exposure net of all collateral	% of exposure net of all collateral
AAA/Aaa to AA-/Aa3	\$25,067	41 %	\$23,342	36 %
A+/A1 to A-/A3	15,460	25	15,812	25
BBB+/Baa1 to BBB-/Baa3	7,618	13	8,403	13
BB+/Ba1 to B-/B3	10,151	17	13,716	22
CCC+/Caa1 and below	2,581	4	2,722	4
Total	\$60,877	100 %	\$63,995	100 %

As noted above, the Firm uses collateral agreements to mitigate counterparty credit risk. The percentage of the Firm's derivatives transactions subject to collateral agreements – excluding foreign exchange spot trades, which are not typically covered by collateral agreements due to their short maturity – remained at 88% as of June 30, 2011, unchanged compared with December 31, 2010. The Firm posted \$57.9 billion and \$58.3 billion of collateral at June 30, 2011, and December 31, 2010, respectively.

Credit derivatives

For a detailed discussion of credit derivatives, including types of derivatives, see Note 5, Credit derivatives, on pages 117–124 of this Form 10-Q, and Credit derivatives on pages 126–127 and Note 6, Credit derivatives, on pages 197–199 of JPMorgan Chase's 2010 Annual Report.

The following table presents the Firm's notional amounts of credit derivatives protection purchased and sold as of June 30, 2011, and December 31, 2010, distinguishing between dealer/client activity and credit portfolio activity.

Credit derivative notional amounts

(in millions)	June 30, 2011					December 31, 2010				
	Dealer/client		Credit portfolio			Dealer/client		Credit portfolio		
	Protection purchased ^(b)	Protection sold	Protection purchased	Protection sold	Total	Protection purchased ^(b)	Protection sold	Protection purchased	Protection sold	Total
Credit default swaps	\$2,927,038	\$2,971,981	\$24,205	\$199	\$5,923,423	\$2,661,657	\$2,658,825	\$23,523	\$415	\$5,344,420
Other credit derivatives ^(a)	61,280	120,733	—	—	182,013	34,250	93,776	—	—	128,026
Total	\$2,988,318	\$3,092,714	\$24,205	\$199	\$6,105,436	\$2,695,907	\$2,752,601	\$23,523	\$415	\$5,472,446

(a) Primarily consists of total return swaps and credit default swap options.

(b) At June 30, 2011, and December 31, 2010, included \$2,949 billion and \$2,662 billion, respectively, of notional exposure where the Firm has sold protection on the identical underlying reference instruments.

Dealer/client business

Within the dealer/client business, the Firm actively manages credit derivatives by buying and selling credit protection, predominantly on corporate debt obligations, according to client demand. For further information, see Note 5 on pages

117–124 of this Form 10-Q.

At June 30, 2011, the total notional amount of protection purchased and sold increased by \$633 billion from December 31, 2010, primarily due to increased activity, particularly in the EMEA region.

Credit portfolio activities

Use of single-name and portfolio credit derivatives (in millions)	Notional amount of protection purchased and sold	
	June 30, 2011	December 31, 2010
Credit derivatives used to manage:		
Loans and lending-related commitments	\$5,775	\$6,698
Derivative receivables	18,430	16,825
Total protection purchased	24,205	23,523
Total protection sold	199	415
Credit derivatives hedges notional, net	\$24,006	\$23,108

The credit derivatives used by JPMorgan Chase for credit portfolio management activities do not qualify for hedge accounting under U.S. GAAP; these derivatives are reported at fair value, with gains and losses recognized in principal transactions revenue. In contrast, the loans and lending-related commitments being risk-managed are accounted for on an accrual basis. This asymmetry in accounting treatment, between loans and lending-related commitments and the credit derivatives used in credit portfolio management activities, causes earnings volatility that is not representative, in the Firm's view, of the true changes in value of the Firm's overall credit exposure. The MTM value related to the Firm's credit derivatives used for managing credit exposure, as well as the MTM value related to the CVA (which reflects the credit quality of derivatives counterparty exposure) are included in the gains and losses realized on credit derivatives disclosed in the table below. These results can vary from period to period due to market conditions that affect specific positions in the portfolio.

Gains and losses on CVA and hedges of CVA and lending-related commitments (in millions)	Three months ended June 30,		Six months ended June 30,	
	2011	2010	2011	2010
Hedges of lending-related commitments	\$(31)	\$60	\$(75)	\$(60)
CVA and hedges of CVA	(98)	(289)	(137)	(290)
Net gains/(losses)	\$(129)	\$(229)	\$(212)	\$(350)

Lending-related commitments

JPMorgan Chase uses lending-related financial instruments, such as commitments and guarantees, to meet the financing needs of its customers. The contractual amounts of these financial instruments represent the maximum possible credit risk should the counterparties draw down on these commitments or the Firm fulfills its obligations under these guarantees, and the counterparties subsequently fails to perform according to the terms of these contracts. Wholesale lending-related commitments were \$365.7 billion at June 30, 2011, compared with \$346.1 billion at December 31, 2010, reflecting increased client activity.

In the Firm's view, the total contractual amount of these wholesale lending-related commitments is not representative of the Firm's actual credit risk exposure or funding requirements. In determining the amount of credit risk exposure the Firm has to wholesale lending-related commitments, which is used as the basis for allocating credit risk capital to these commitments, the Firm has established a "loan-equivalent" amount for each commitment; this amount represents the portion of the unused commitment or other contingent exposure that is expected, based on average portfolio historical experience, to become drawn upon in an event of a default by an obligor. The loan-equivalent amounts of the Firm's lending-related commitments were \$194.7 billion and \$178.9 billion as of June 30, 2011, and December 31, 2010, respectively.

Country exposure

The Firm's wholesale portfolio includes country risk exposures to both developed and emerging markets. The Firm seeks to diversify its country exposures, including its credit-related lending, derivative, trading and investment activities, whether cross-border or locally funded.

Country exposure under the Firm's internal risk management approach is reported based on the country where the assets of the obligor, counterparty or guarantor are located or where the majority of the revenue is derived, and includes activity with both government and private-sector entities in a country. Exposure amounts include the fair value of derivative receivables and consider credit derivative protection sold and bought, based on the country of the referenced obligation. Exposure amounts, including resale agreements, are adjusted for collateral received by the Firm, for credit enhancements (e.g., guarantees and letters of credit) provided by third parties and for credit derivative protection purchased (which can be either name-specific or sovereign-referenced). Exposures supported by a guarantor located outside the country are generally assigned to the country of the enhancement provider. For trading and investment activities, other short credit or equity trading positions are taken into consideration.

Several European countries, including Greece, Portugal, Spain, Italy and Ireland, have been subject to credit deterioration due to weaknesses in their economic and fiscal situations. The Firm is closely monitoring its exposures in these countries. As of June 30, 2011, aggregate net exposures to these five countries as measured under the Firm's internal approach was approximately \$14 billion. Sovereign exposure in all five countries represented approximately 26% of the aggregate net exposure, with the majority of the sovereign exposure in Spain. The Firm's exposure to corporate clients in all five countries represented approximately 62% of the aggregate net exposure. The Firm's exposure to the banking sector represented approximately 12%.

The Firm currently believes its exposure to these five countries is modest relative to the Firm's overall risk exposures and is manageable given the size and types of exposures to each of the countries and the diversification of the aggregate exposure. Net exposure is adjusted for liquid collateral held, of which approximately 90% consists of cash and non-sovereign collateral. In addition, predominately all of the credit derivative protection is purchased from investment-grade counterparties domiciled outside of these countries.

The Firm continues to conduct business and support client activity in these countries and, therefore, the Firm's aggregate net exposures and sector distribution may vary over time. In addition, the net exposures may be affected by changes in market conditions, including the effects of interest rates and credit spreads on market valuations.

As part of its ongoing country risk management process, the Firm monitors exposure to emerging market countries, and utilizes country stress tests to measure and manage the risk of extreme loss associated with a sovereign crisis in one or more countries. There is no common definition of emerging markets, but the Firm generally includes in its definition those countries whose sovereign debt ratings are equivalent to "A+" or lower. The table below presents the Firm's exposure to its top 10 emerging markets countries based on its internal measurement approach. The selection of countries is based solely on the Firm's largest total exposures by country and does not represent its view of any actual or potentially adverse credit conditions.

Top 10 emerging markets country exposure

(a) Lending includes loans and accrued interests receivable, interests-earning deposits with banks, acceptances, other monetary assets, issued letters of credit net of participations, and undrawn commitments to extend credit.

- Trading includes: (1) issuer exposure on cross-border debt and equity instruments, held both in trading and investment accounts and adjusted for the impact of issuer hedges, including credit derivatives; and (2) counterparty exposure on derivative and foreign exchange contracts as well as securities financing trades (resale agreements and securities borrowed).
- (b)
- (c) Other represents mainly local exposure funded cross-border, including capital investments in local entities.
- (d) Local exposure is defined as exposure to a country denominated in local currency and booked locally. Any exposure not meeting these criteria is defined as cross-border exposure.

CONSUMER CREDIT PORTFOLIO

JPMorgan Chase's consumer portfolio consists primarily of residential mortgages, home equity loans and lines of credit, credit cards, auto loans, student loans and business banking loans. The Firm's primary focus is on serving the prime consumer credit market. For further information on the consumer loans, see Note 13 on pages 134–148 of this Form 10-Q.

A substantial portion of the consumer loans acquired in the September 2008 Washington Mutual transaction were identified as purchased credit-impaired based on an analysis of high-risk characteristics, including product type, loan-to-value ("LTV") ratios, FICO scores and delinquency status. These PCI loans are accounted for on a pool basis, and the pools are considered to be performing. For further information on PCI loans see Note 13 on pages 134–148 of this Form 10-Q and Note 14 on pages 220–238 of JPMorgan Chase's 2010 Annual Report.

The credit performance of the consumer portfolio across the entire product spectrum has improved, particularly in credit card, but high unemployment and weak overall economic conditions continued to result in an elevated number of residential real estate loans that charge-off, while weak housing prices continued to negatively affect the severity of loss recognized on residential real estate loans that default. Both early-stage residential real estate delinquencies (30–89 days delinquent) and late-stage delinquencies (150+ days delinquent) have declined in 2011 but remained elevated.

The elevated level of the late-stage delinquent loans is due, in part, to loss-mitigation activities currently being undertaken and to elongated foreclosure processing timelines. Losses related to these loans continued to be recognized in accordance with the Firm's standard charge-off practices, but some delinquent loans that would otherwise have been foreclosed upon remain in the mortgage and home equity loan portfolios. Ongoing weak economic conditions, combined with elevated delinquencies and ongoing discussions regarding mortgage foreclosure-related matters with federal and state officials, continue to result in a high level of uncertainty in the residential real estate portfolio.

The Firm has taken actions since the onset of the economic downturn in 2007 to tighten underwriting and loan qualification standards and to eliminate certain products and loan origination channels, which have resulted in the reduction of credit risk and improved credit performance for recent loan vintages.

The following table presents managed consumer credit-related information (including RFS, CS and residential real estate loans reported in the Corporate/Private Equity segment) for the dates indicated. For further information about the Firm's nonaccrual and charge-off accounting policies, see Note 14 on pages 220–238 of JPMorgan Chase's 2010 Annual Report.

(a) Represents loans where JPMorgan Chase holds the first security interest on the property.

(b) Represents loans where JPMorgan Chase holds a security interest that is subordinate in rank to other liens.

(c) At June 30, 2011, and December 31, 2010, excluded operating lease-related assets of \$4.2 billion and \$3.7 billion, respectively.

Charge-offs are not recorded on PCI loans until actual losses exceed estimated losses that were recorded as (d) purchase accounting adjustments at the time of acquisition. To date, no charge-offs have been recorded for these loans.

(e) Represents prime mortgage loans held-for-sale.

The credit card and home equity lending–related commitments represent the total available lines of credit for these products. The Firm has not experienced, and does not anticipate, that all available lines of credit would be used at (f) the same time. For credit card commitments and home equity commitments (if certain conditions are met), the Firm can reduce or cancel these lines of credit by providing the borrower notice or, in some cases, without notice as permitted by law.

(g) Includes billed finance charges and fees net of an allowance for uncollectible amounts.

(h) At June 30, 2011, and December 31, 2010, nonaccrual loans excluded: (1) mortgage loans insured by U.S. government agencies of \$9.1 billion and \$9.4 billion,

respectively, that are 90 or more days past due; and (2) student loans insured by U.S. government agencies under the FFELP of \$558 million and \$625 million, respectively, that are 90 or more days past due. These amounts were excluded as reimbursement of insured amounts is proceeding normally. In addition, the Firm's policy is generally to exempt credit card loans from being placed on nonaccrual status as permitted by regulatory guidance. Under guidance issued by the FFIEC, credit card loans are charged off by the end of the month in which the account becomes 180 days past due or within 60 days from receiving notification about a specified event (e.g., bankruptcy of the borrower), whichever is earlier.

Excludes PCI loans that were acquired as part of the Washington Mutual transaction, which are accounted for on a pool basis. Since each pool is accounted for as a single asset with a single composite interest rate and an aggregate (i) expectation of cash flows, the past-due status of the pools, or that of individual loans within the pools, is not meaningful. Because the Firm is recognizing interest income on each pool of loans, they are all considered to be performing.

Average consumer loans held-for-sale were \$352 million and \$1.9 billion, respectively, for the three months ended (j) June 30, 2011 and 2010, and \$1.7 billion and \$2.4 billion, respectively, for the six months ended June 30, 2011 and 2010. These amounts were excluded when calculating net charge-off rates.

Consumer, excluding credit card

Loan balances declined during the six months ended June 30, 2011, due to paydowns, portfolio run-off and charge-offs. Credit performance has improved across most portfolios but remains under stress. The following discussion relates to the specific loan and lending-related categories. PCI loans are generally excluded from individual loan product discussions and are addressed separately below.

Home equity: Home equity loans at June 30, 2011, were \$82.8 billion, compared with \$88.4 billion at December 31, 2010. The decrease in this portfolio primarily reflected loan paydowns and charge-offs. Senior lien nonaccrual loans remained relatively flat compared with December 31, 2010, while junior lien nonaccrual loans increased slightly. Early-stage delinquencies modestly improved from December 31, 2010, while net charge-offs improved from the same period of the prior year.

Approximately 20% of the Firm's owned home equity portfolio consists of home equity loans ("HELOANS") and the remainder consists of home equity lines of credit ("HELOCs"). HELOANS are generally fixed-rate, closed-end, amortizing loans, with terms ranging from 3–30 years. Approximately half of the HELOANS are senior liens and the remainder are junior liens. In general, HELOCs are open-ended, revolving loans for a 10-year period, after which time the HELOC converts to a loan with a 20-year amortization period. The Firm manages the risk of HELOCs during their revolving period by closing or reducing the undrawn line to the extent permitted by law when borrowers are experiencing financial difficulty or where collateral does not support the loan amount. Because the majority of the HELOCs were funded in 2005 or later, a fully-amortizing payment is not required for the most significant portion of the HELOC portfolio until 2015 or after. The Firm regularly evaluates both the near-term and longer-term repricing risks inherent in its HELOC portfolio to ensure that the allowance for credit losses and account management practices are appropriate given the portfolio risk profile.

At June 30, 2011, the Firm estimates that its home equity portfolio contained approximately \$4 billion of junior lien loans where the borrower has a first mortgage loan that is either delinquent or has been modified. Such loans are considered to pose a higher risk of default than that of junior lien loans for which the senior lien is neither delinquent nor modified. Of this estimated \$4 billion balance, the Firm owns less than 5% and services approximately 30% of the related senior lien loans to these same borrowers; in these cases, the Firm knows whether the senior lien loan is either delinquent or modified. In the other cases where the Firm neither owns nor services the senior lien loan, the Firm estimates the amount of higher-risk junior lien loans. The performance of the Firm's junior lien loans is otherwise materially consistent regardless of whether the Firm owns, services or does not service the senior lien. The increased probability of default associated with these higher-risk junior lien loans was considered in estimating the allowance for loan losses.

Mortgage: Mortgage loans at June 30, 2011, including prime, subprime and loans held-for-sale, were \$84.9 billion, compared with \$86.0 billion at December 31, 2010. The decrease was primarily due to paydowns, portfolio run-off and charge-offs on delinquent loans, partially offset by prime mortgage originations. Net charge-offs decreased from

the same period in the prior year but remained elevated.

Prime mortgages, including option adjustable-rate mortgages (“ARMs”) and loans held-for-sale at June 30, 2011, were \$74.5 billion, compared with \$74.7 billion at December 31, 2010. Such loans were relatively unchanged from December 31, 2010, as charge-offs on delinquent loans, paydowns, and portfolio run-off of option ARM loans were offset by prime mortgage originations. Excluding loans insured by U.S. government agencies, both early-stage and late-stage delinquencies showed modest improvement during the first half of the year but remained elevated.

Nonaccrual loans showed improvement, but also remained elevated as a result of ongoing foreclosure processing delays. Net charge-offs declined year over year but remained high.

Option ARM loans, which are included in the prime mortgage portfolio, were \$7.9 billion and \$8.1 billion at June 30, 2011, and December 31, 2010, respectively, and represented 11% of the prime mortgage portfolio in both periods. The decrease in option ARM loans resulted from portfolio run-off, partially offset by the repurchase of loans previously securitized as the securitization entities were terminated. The Firm’s option ARM loans, other than those held in the PCI portfolio, are primarily loans with lower LTV ratios and higher borrower FICOs. Accordingly, the Firm expects substantially lower losses on this portfolio when compared with the PCI option ARM pool. As of June 30, 2011, approximately 6% of option ARM borrowers were delinquent, 4% were making interest-only or negatively amortizing payments, and 90% were making amortizing payments. Approximately 84% of borrowers within the portfolio are subject to risk of payment shock due to future payment recast, as a limited number of these loans have been modified. The cumulative amount of unpaid interest added to the unpaid principal balance due to negative

amortization of option ARMs was not material at either June 30, 2011, or December 31, 2010. The Firm estimates the following balances of option ARM loans will experience a recast that results in a payment increase: \$29 million in 2011, \$297 million in 2012 and \$981 million in 2013. The Firm did not originate option ARMs and new originations of option ARMs were discontinued by Washington Mutual prior to the date of JPMorgan Chase's acquisition of its banking operations.

Subprime mortgages at June 30, 2011, were \$10.4 billion, compared with \$11.3 billion at December 31, 2010. The decrease was due to portfolio run-off and charge-offs on delinquent loans. Both early-stage and late-stage delinquencies improved from December 2010. However, delinquencies and nonaccrual loans remained at elevated levels. Net charge-offs improved significantly from the same period in the prior year.

Auto: Auto loans at June 30, 2011, were \$46.8 billion, compared with \$48.4 billion at December 31, 2010. Loan balances declined due to the impact of increased competition. Delinquent and nonaccrual loans have decreased. Net charge-offs declined from the prior year as a result of lower delinquencies and a decline in loss severity due to a strong used-car market nationwide. The auto loan portfolio reflected a high concentration of prime-quality credits.

Business banking: Business banking loans at June 30, 2011, were \$17.1 billion, compared with \$16.8 billion at December 31, 2010. The increase was due to growth in new loan origination volumes. These loans primarily include loans that are collateralized, often with personal loan guarantees, and may also include Small Business Administration guarantees. Delinquent loans and nonaccrual loans showed some improvement, but remain elevated. Net charge-offs declined from the prior year.

Student and other: Student and other loans at June 30, 2011, were \$14.8 billion, compared with \$15.3 billion at December 31, 2010. The decrease was due to paydowns in student loans. Other loans primarily include other secured and unsecured consumer loans. Delinquencies and nonaccrual loans remained elevated, while charge-offs decreased from the prior-year quarter.

Purchased credit-impaired loans: PCI loans at June 30, 2011, were \$69.0 billion, compared with \$72.8 billion at December 31, 2010. This portfolio represents loans acquired in the Washington Mutual transaction that were recorded at fair value at the time of acquisition.

The Firm regularly updates the amount of principal and interest cash flows expected to be collected for these loans. Probable decreases in expected loan principal cash flows would trigger the recognition of impairment through the provision for loan losses. Probable and significant increases in expected cash flows (e.g., decreased principal credit losses, the net benefit of modifications) would first reverse any previously recorded allowance for loan losses, with any remaining increase in the expected cash flows recognized prospectively in interest income over the remaining estimated lives of the underlying loans.

At both June 30, 2011, and December 31, 2010, the Firm's allowance for loan losses for the home equity, prime mortgage, subprime mortgage and option ARM PCI pools was \$1.6 billion, \$1.8 billion, \$98 million and \$1.5 billion, respectively.

Approximately 36% of the option ARM PCI loans were delinquent, 4% were making interest-only or negatively amortizing payments, and 60% were making amortizing payments. Approximately 34% of current borrowers are subject to risk of payment shock due to future payment recast; substantially all of the remaining loans have been modified into fixed-rate, fully amortizing loans. The cumulative amount of unpaid interest added to the unpaid principal balance of the option ARM PCI pool was \$1.2 billion and \$1.4 billion at June 30, 2011, and December 31, 2010, respectively. The Firm estimates the following balances of option ARM PCI loans will experience a recast that results in a payment increase: \$547 million in 2011, \$2.4 billion in 2012 and \$501 million in 2013.

The following table provides a summary of lifetime loss estimates included in both the nonaccretable difference and the allowance for loan losses. Principal charge-offs will not be recorded on these pools until the nonaccretable difference has been fully depleted.

(in billions)	Lifetime loss estimates ^(a)		LTD liquidation losses ^(b)	
	June 30, 2011	December 31, 2010	June 30, 2011	December 31, 2010
Home equity	\$14.7	\$14.7	\$9.7	\$8.8
Prime mortgage	4.9	4.9	1.9	1.5

Edgar Filing: J P MORGAN CHASE & CO - Form 10-Q

Subprime mortgage	3.7	3.7	1.4	1.2
Option ARMs	11.6	11.6	5.7	4.9
Total	\$34.9	\$34.9	\$18.7	\$16.4

(a) Includes the original nonaccretable difference established in purchase accounting of \$30.5 billion for principal losses only plus additional principal losses recognized subsequent to acquisition through the provision and allowance for loan losses. The remaining nonaccretable difference for principal losses only was \$11.8 billion and \$14.1 billion at June 30, 2011, and December 31, 2010, respectively.

(b) Life-to-date ("LTD") liquidation losses represent realization of loss upon loan resolution.

Geographic composition and current LTVs of residential real estate loans

The consumer credit portfolio is geographically diverse. California has the greatest concentration of residential real estate loans with 24% of the total retained residential real estate loan portfolio, excluding mortgage loans insured by U.S. government agencies and PCI loans at both June 30, 2011, and December 31, 2010. Of the total retained residential real estate loan portfolio, excluding mortgage loans insured by U.S. government agencies and PCI loans, \$82.7 billion, or 54%, were concentrated in California, New York, Arizona, Florida and Michigan at June 30, 2011, compared with \$86.4 billion, or 54%, at December 31, 2010.

The current estimated average LTV ratio for residential real estate loans retained, excluding mortgage loans insured by U.S. government agencies and PCI loans, was 83% at both June 30, 2011 and December 31, 2010. Excluding mortgage loans insured by U.S. government agencies and PCI loans, 24% of the retained portfolio had a current estimated LTV ratio greater than 100%, and 10% of the retained portfolio had a current estimated LTV ratio greater than 125% at both June 30, 2011 and December 31, 2010. The decline in home prices since 2007 has had a significant impact on the collateral value underlying the Firm's residential real estate loan portfolio. In general, the delinquency rate for loans with high LTV ratios is greater than the delinquency rate for loans in which the borrower has equity in the collateral. While a large portion of the loans with current estimated LTV ratios greater than 100% continue to pay and are current, the continued willingness and ability of these borrowers to pay remains uncertain.

The following table presents the current estimated LTV ratio, as well as the ratio of the carrying value of the underlying loans to the current estimated collateral value, for PCI loans. Because such loans were initially measured at fair value, the ratio of the carrying value to the current estimated collateral value will be lower than the current estimated LTV ratio, which is based on the unpaid principal balance. The estimated collateral values used to calculate these ratios do not represent actual appraised loan-level collateral values; as such, the resulting ratios are necessarily imprecise and should therefore be viewed as estimates.

LTV ratios and ratios of carrying values to current estimated collateral values – PCI loans

	June 30, 2011				December 31, 2010			
	Unpaid principal balance ^(a)	Current estimated LTV ratio ^(b)	Net carrying value ^(d)	Ratio of net carrying value to current estimated collateral value ^(d)	Unpaid principal balance ^(a)	Current estimated LTV ratio ^(b)	Net carrying value ^(d)	Ratio of net carrying value to current estimated collateral value ^(d)
(in millions, except ratios)								
Home equity	\$26,611	117	% ^(c) \$21,952	97	% \$28,312	117	% ^(c) \$22,876	95
Prime mortgage	17,473	110	14,434	91	18,928	109	15,556	90
Subprime mortgage	7,677	115	5,089	76	8,042	113	5,300	74
Option ARMs	28,445	110	22,578	87	30,791	111	24,090	87

(a) Represents the contractual amount of principal owed at June 30, 2011, and December 31, 2010.

Represents the aggregate unpaid principal balance of loans divided by the estimated current property value. Current property values are estimated at least quarterly based on home valuation models that utilize nationally recognized home price index valuation estimates; such models incorporate actual data to the extent available and forecasted data where actual data is not available.

Represents current estimated combined LTV for junior home equity liens, which considers all available lien positions related to the property. All other products are presented without consideration of subordinate liens on the property.

Net carrying value includes the effect of fair value adjustments that were applied to the consumer PCI portfolio at the date of acquisition and is also net of the allowance for loan losses, which was \$1.6 billion for home equity, \$1.8 billion for prime mortgage, \$98 million for subprime mortgage and \$1.5 billion for option ARMs at both June 30, 2011, and December 31, 2010. Prior-period amounts have been revised to conform to the current-period presentation.

PCI loans in the states of California and Florida represented 53% and 10%, respectively, of total PCI loans at both June 30, 2011, and December 31, 2010. The current estimated average LTV ratios were 118% and 140% for California and Florida loans, respectively, at June 30, 2011, compared with 118% and 135%, respectively, at December 31, 2010. Continued pressure on housing prices in California and Florida have contributed negatively to both the current estimated average LTV ratio and the ratio of net carrying value to current estimated collateral value for loans in the PCI portfolio. Of the PCI portfolio, at both June 30, 2011 and December 31, 2010, 63% had a current estimated LTV ratio greater than 100%, and 31% had a current estimated LTV ratio greater than 125%.

While the current estimated collateral value is greater than the net carrying value of PCI loans, the ultimate performance of this portfolio is highly dependent on borrowers' behavior and ongoing ability and willingness to continue to make payments on homes with negative equity, as well as on the cost of alternative housing. For further information on the geographic composition and current estimated LTVs of residential real estate – non-PCI and PCI loans, see Note 13 on pages 134–148 of this Form 10-Q.

Loan modification activities

For additional information about consumer loan modification activities, including consumer loan modifications accounted for as troubled debt restructurings (“TDRs”), see Note 13 on pages 134–148 of this Form 10-Q and Note 14 on pages 139–140 of JPMorgan Chase’s 2010 Annual Report.

Residential real estate loans: For both the Firm’s on–balance sheet loans and loans serviced for others, more than 1,177,000 mortgage modifications have been offered to borrowers and approximately 375,000 have been approved since the beginning of 2009. Of these, approximately 355,000 have achieved permanent modification as of June 30, 2011. Of the remaining 802,000 offered modifications, 27% are in a trial period or still being reviewed for a modification, while 73% have dropped out of the modification program or otherwise were not eligible for final modification.

The Firm is participating in the U.S. Treasury’s Making Home Affordable (“MHA”) programs and is continuing to expand its other loss-mitigation efforts for financially distressed borrowers who do not qualify for the U.S. Treasury’s programs. The MHA programs include the Home Affordable Modification Program (“HAMP”) and the Second Lien Modification Program (“2MP”). The Firm’s other loss-mitigation programs for troubled borrowers who do not qualify for HAMP include the traditional modification programs offered by the GSEs and Ginnie Mae, as well as the Firm’s proprietary modification programs, which include concessions similar to those offered under HAMP but with expanded eligibility criteria. In addition, the Firm has offered modification programs targeted specifically to borrowers with higher-risk mortgage products.

MHA, as well as the Firm’s other loss-mitigation programs, generally provide various concessions to financially troubled borrowers, including, but not limited to, interest rate reductions, term or payment extensions, and deferral or forgiveness of principal payments that would have otherwise been required under the terms of the original agreement. For the 81,300 on–balance sheet loans modified under HAMP and the Firm’s other loss-mitigation programs since July 1, 2009, 53% of permanent loan modifications have included interest rate reductions, 57% have included term or payment extensions, 12% have included principal deferment and 22% have included principal forgiveness. Principal forgiveness has been limited to specific modification programs to higher-risk borrowers. The sum of the percentages of the types of loan modifications exceeds 100%, because in some cases, the modification of an individual loan includes more than one type of concession.

Generally, borrowers must make at least three payments under the new terms during a trial modification period and be successfully re-underwritten with income verification before a mortgage or home equity loan can be permanently modified. When the Firm modifies home equity lines of credit, future lending commitments related to the modified loans are canceled as part of the terms of the modification.

The ultimate success of these modification programs and their impact on reducing credit losses remains uncertain given the short period of time since modification. The primary indicator used by management to monitor the success of these programs is the rate at which the modified loans redefault. Modification redefault rates are affected by a number of factors, including the type of loan modified, the borrower’s overall ability and willingness to repay the modified loan and other macroeconomic factors. Reduction in payment size for a borrower has shown to be the most significant driver in improving redefault rates. Modifications completed after July 1, 2009, whether under HAMP or under the Firm’s other modification programs, differ from modifications completed under prior programs in that they are generally fully underwritten after a successful trial payment period of at least three months. Performance metrics to date for modifications seasoned more than six months show weighted average redefault rates of 20% and 28% for HAMP and the Firm’s other modification programs, respectively. These redefault rates exclude certain recent modifications that were offered to borrowers who were current on their loans prior to modification, but who were subject to future payment recast risk. The weighted average default rate for such modifications that have seasoned more than six months was 5%. While the redefault rates for HAMP and the Firm’s other modification programs compare favorably to equivalent metrics for modifications completed under programs in effect prior to July 1, 2009, ultimate redefault rates remain uncertain until modified loans have seasoned.

The following table presents information as of June 30, 2011, and December 31, 2010, relating to restructured on–balance sheet residential real estate loans for which concessions have been granted to borrowers experiencing financial difficulty. Modifications of PCI loans continue to be accounted for and reported as PCI loans, and the impact

of the modification is incorporated into the Firm's quarterly assessment of estimated future cash flows. Modifications of consumer loans other than PCI loans are generally accounted for and reported as TDRs.

Restructured residential real estate loans

(in millions)	June 30, 2011		December 31, 2010	
	On-balance sheet loans	Nonaccrual on-balance sheet loans ^(d)	On-balance sheet loans	Nonaccrual on-balance sheet loans ^(d)
Restructured residential real estate loans – excluding PCI loans ^{(a)(b)}				
Home equity – senior lien	\$261	\$53	\$226	\$38
Home equity – junior lien	517	232	283	63
Prime mortgage, including option ARMs	3,390	698	2,084	534
Subprime mortgage	2,843	695	2,751	632
Total restructured residential real estate loans – excluding PCI loans	\$7,011	\$1,678	\$5,344	\$1,267
Restructured PCI loans ^(c)				
Home equity	\$749	NA	\$492	NA
Prime mortgage	3,663	NA	3,018	NA
Subprime mortgage	3,560	NA	3,329	NA
Option ARMs	12,574	NA	9,396	NA
Total restructured PCI loans	\$20,546	NA	\$16,235	NA

(a) Amounts represent the carrying value of restructured residential real estate loans.

At June 30, 2011, and December 31, 2010, \$3.5 billion and \$3.0 billion, respectively, of loans modified subsequent to repurchase from Ginnie Mae in accordance with the standards of the appropriate government agency (i.e., FHA, VA, RHA) were excluded from loans accounted for as TDRs. When such loans perform subsequent to modification in accordance with Ginnie Mae guidelines, they are generally sold back into Ginnie Mae loan pools. Modified loans that do not re-perform become subject to foreclosure. For additional information about sales of loans in securitization transactions with Ginnie Mae, see Note 15 on pages 151–159 of this Form 10-Q.

(c) Amounts represent the unpaid principal balance of restructured PCI loans.

Nonaccrual loans modified in a TDR may be returned to accrual status when repayment is reasonably assured and the borrower has made a minimum of six payments under the new terms or three payments subsequent to permanent modification if trial modification payments were made. As of June 30, 2011, and December 31, 2010, nonaccrual loans included \$938 million and \$580 million, respectively, of TDRs for which the borrowers had not yet made six payments under the modified terms.

Foreclosure prevention: Foreclosure is a last resort, and the Firm makes significant efforts to help borrowers stay in their homes. Since the second quarter of 2009, the Firm has prevented two foreclosures (through loan modification, short sales, and other foreclosure prevention means) for every foreclosure completed.

The Firm has a well-defined foreclosure prevention process when a borrower fails to pay on his or her loan. Customer contacts are attempted multiple times in various ways to pursue options other than foreclosure. In addition, if the Firm is unable to contact a customer, various reviews are completed of a borrower's facts and circumstances before a foreclosure sale is completed. By the time of a foreclosure sale, borrowers have not made a payment on average for more than 14 months.

The foreclosure process is governed by laws and regulations established on a state-by-state basis. In some states, the foreclosure process involves a judicial process requiring filing documents with a court. In other states, the process is mostly non-judicial, involving various processes, some of which require filing documents with governmental agencies. During the third quarter of 2010, the Firm became aware that certain documents executed by Firm personnel in connection with the foreclosure process may not have complied with all applicable procedural requirements. As a result, the Firm instructed its outside foreclosure counsel to temporarily suspend foreclosures, foreclosure sales and evictions in 43 states so that it could review its processes. These matters are the subject of investigation by federal and state officials. For further discussion, see "Mortgage Foreclosure Investigations and Litigation" in Note 23 on pages 172–179 of this Form 10-Q.

As of June 30, 2011, the Firm has resumed initiation of new foreclosure proceedings in nearly all states in which it had previously suspended such proceedings.

Nonperforming assets

The following table presents information as of June 30, 2011, and December 31, 2010, about consumer, excluding credit card nonperforming assets.

Nonperforming assets^(a)

(in millions)	June 30, 2011	December 31, 2010
Nonaccrual loans ^{(b)(c)}		
Home equity – senior lien	\$481	\$479
Home equity – junior lien	827	784
Prime mortgage, including option ARMs	4,024	4,320
Subprime mortgage	2,058	2,210
Auto	111	141
Business banking	770	832
Student and other	79	67
Total nonaccrual loans	8,350	8,833
Assets acquired in loan satisfactions		
Real estate owned	956	1,294
Other	46	67
Total assets acquired in loan satisfactions	1,002	1,361
Total nonperforming assets	\$9,352	\$10,194

At June 30, 2011, and December 31, 2010, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of \$9.1 billion and \$9.4 billion, respectively, that are 90 or more days past due; (2) real estate (a) owned insured by U.S. government agencies of \$2.4 billion and \$1.9 billion, respectively; and (3) student loans insured by U.S. government agencies under the FFELP of \$558 million and \$625 million, respectively, that are 90 or more days past due. These amounts were excluded as reimbursement of insured amounts is proceeding normally. Excludes PCI loans that were acquired as part of the Washington Mutual transaction, which are accounted for on a pool basis. Since each pool is accounted for as a single asset with a single composite interest rate and an aggregate (b) expectation of cash flows, the past-due status of the pools, or that of individual loans within the pools, is not meaningful. Because the Firm is recognizing interest income on each pool of loans, they are all considered to be performing.

(c) At June 30, 2011, and December 31, 2010, consumer, excluding credit card nonaccrual loans represented 2.65% and 2.70%, respectively, of total consumer, excluding credit card loans ..

Nonaccrual loans: Total consumer, excluding credit card nonaccrual loans, were \$8.4 billion at June 30, 2011, compared with \$8.8 billion at December 31, 2010. Nonaccrual loans have stabilized, but remained at elevated levels. The increase in loan modification activities is expected to continue to result in elevated levels of nonaccrual loans in the residential real estate portfolios as a result of both redefault of modified loans as well as the Firm's policy that modified loans remain in nonaccrual status until repayment is reasonably assured and the borrower has made a minimum of six payments under the new terms or three payments subsequent to permanent modification if trial modification payments were made. Nonaccrual loans in the residential real estate portfolio totaled \$7.4 billion at June 30, 2011, of which 71% were greater than 150 days past due; this compared with nonaccrual residential real estate loans of \$7.8 billion at December 31, 2010, of which 71% were greater than 150 days past due. Modified residential real estate loans of \$1.7 billion and \$1.3 billion at June 30, 2011, and December 31, 2010, respectively, were classified as nonaccrual loans. Of these modified residential real estate loans, \$938 million and \$580 million had yet to make six payments under their modified terms at June 30, 2011, and December 31, 2010, respectively, with the remaining nonaccrual modified loans having redefaulted. In the aggregate, the unpaid principal balance of residential real estate loans greater than 150 days past due was charged down by approximately 48% and 46% to estimated collateral value at June 30, 2011, and December 31, 2010, respectively.

Real estate owned ("REO"): REO assets, excluding those insured by U.S. government agencies, decreased by \$338 million from December 31, 2010, to \$956 million at June 30, 2011.

Enhancements to Mortgage Servicing

During the second quarter of 2011, the Firm entered into Consent Orders with banking regulators relating to its residential mortgage servicing, foreclosure and loss-mitigation activities. In their Orders, the regulators have mandated significant changes to the Firm's servicing and default business and outlined requirements to implement these changes. In accordance with the requirements of the Consent Orders, the Firm submitted a comprehensive action plan setting forth the steps necessary to ensure the Firm's residential mortgage servicing, foreclosure and loss-mitigation activities are conducted in accordance with the requirements of the Orders. In addition, the Firm has undertaken remedial actions to ensure that it satisfies all requirements relating to mortgage servicing, foreclosures and loss-mitigation activities outlined in the Consent Orders. These corrective actions, which the Firm intends to implement over the course of this year, include:

- Strengthening its compliance program so as to ensure mortgage-servicing and foreclosure operations, including loss-mitigation and loan modification, comply with all applicable legal requirements.

- Establishing a single point of contact for borrowers to ensure effective coordination and communication related to foreclosure,

loss-mitigation and loan modification.

Ensuring appropriate oversight over third-party vendors for foreclosure or other related functions.

Ensuring appropriate controls and oversight of the Firm's activities with respect to the Mortgage Electronic Registration system ("MERS") and compliance with MERSCORP's membership rules, terms and conditions.

Enhancing management information systems for loan modification, loss-mitigation and foreclosure activities.

- Developing a comprehensive assessment of risks in servicing operations including, but not limited to, operational, transaction, legal and reputational risks.

In addition, pursuant to the Consent Orders, the Firm is required to enhance oversight of its mortgage servicing activities, including compliance, management and audit and, accordingly, is making changes in its organization structure, control oversight and customer service practices, which include:

Establishing an independent Compliance Committee which meets regularly and monitors progress against the Consent Orders.

Submission of a MERS plan which will ensure the Firm has the appropriate controls in place and is in compliance with MERSCORP's membership rules, terms, and conditions.

Completion of a draft comprehensive risk assessment which has been submitted to senior management for review; a risk management plan is under development and it is intended to be completed within 120 days of the Consent Order.

Adding and upgrading compliance resources to support their expanded role with regard to ongoing activities as well as the expanded testing plan.

Defining the single point of contact role, including the roles of supervisors and managers, and the subsequent initiation of a pilot with the rollout of the single point of contact scheduled for later this year.

Additionally, pursuant to the Consent Orders, the Firm has retained an independent consultant to conduct a review of its residential foreclosure actions during the period from January 1, 2009, through December 31, 2010 (including foreclosure actions brought in respect to loans being serviced), and to remediate any errors or deficiencies identified by the independent consultant, including, if required, by reimbursing borrowers for any identified financial injury they may have incurred. The identification of residential mortgage loans serviced by the Firm in which a foreclosure action was initiated is in process and will be provided to the Independent Consultant. The borrower outreach process is being developed. For additional information, see Note 23 on pages 172–179 of this Form 10-Q.

Credit Card

Total credit card loans were \$125.5 billion at June 30, 2011, a decrease of \$12.2 billion from December 31, 2010, due to seasonality, higher repayment rates, runoff of the Washington Mutual portfolio and the Firm's sale of the \$3.7 billion Kohl's portfolio on April 1, 2011.

For the retained credit card portfolio, the 30 plus day delinquency rate decreased to 2.98% at June 30, 2011, from 4.14% at December 31, 2010; and the net charge-off rate decreased to 5.82% for the three months ended June 30, 2011, from 10.20% for the three months ended June 30, 2010. For the six months ended June 30, 2011 and 2010, the respective net charge-off rates were 6.40% and 10.99%. The delinquency trend is showing improvement, especially within early-stage delinquencies. Charge-offs have improved as a result of lower delinquent loans. The credit card portfolio continues to reflect a well-seasoned, largely rewards-based portfolio that has good U.S. geographic diversification. The greatest geographic concentration of credit card retained loans is in California, which represented 13% of total retained loans at both June 30, 2011, and December 31, 2010. Loan concentration for the top five states of California, New York, Texas, Florida and Illinois consisted of \$50.5 billion in receivables, or 40% of the retained loan portfolio, at June 30, 2011, compared with \$54.4 billion, or 40%, at December 31, 2010.

Total retained credit card loans, excluding the Washington Mutual portfolio, were \$113.8 billion at June 30, 2011, compared with \$121.8 billion at December 31, 2010. The 30 plus day delinquency rate was 2.71% at June 30, 2011, down from 3.73% at December 31, 2010, and the net charge-off rate decreased to 5.23% for the three months ended June 30, 2011, from 9.02% for the three months ended June 30, 2010. For the six months ended June 30, 2011 and 2010, the respective net charge-off rates were 5.77% and 9.80%.

Retained credit card loans in the Washington Mutual portfolio were \$11.8 billion at June 30, 2011, compared with \$13.7 billion at December 31, 2010. The Washington Mutual portfolio's 30 plus day delinquency rate was 5.53% at June 30, 2011, down from 7.74% at December 31, 2010. The respective net charge-off rates for the three months ended June 30, 2011 and 2010, were 11.28% and 19.53%, and for the six months ended June 30, 2011 and 2010, the respective net charge-off rate was 12.16% and 20.10%.

Modifications of credit card loans

For additional information about loan modification programs to borrowers, see Modifications of credit card loans on pages 137–138 of JPMorgan Chase's 2010 Annual Report.

At June 30, 2011, and December 31, 2010, the Firm had \$8.5 billion and \$10.0 billion, respectively, of on-balance sheet credit card loans outstanding that have been modified in TDRs. These balances included both credit card loans with modified payment terms and credit card loans that reverted back to their pre-modification payment terms. The decrease in modified credit card loans outstanding from December 31, 2010, to June 30, 2011, was primarily attributable to a reduction in new modifications, with ongoing payments or charge-offs on previously modified credit card loans also contributing to the decrease. The Firm expects that a significant portion of the borrowers whose loans have been modified will not ultimately comply with the modified payment terms. Based on historical experience, the estimated weighted-average ultimate default rates for modified credit card loans were 37.40% at June 30, 2011, and 36.45% at December 31, 2010.

Consistent with the Firm's policy, all credit card loans typically remain on accrual status. However, the Firm establishes an allowance for the estimated uncollectible portion of billed and accrued interest and fee income on credit card loans, which is reflected as a charge to interest income.

COMMUNITY REINVESTMENT ACT EXPOSURE

The Community Reinvestment Act ("CRA") encourages banks to meet the credit needs of borrowers in all segments of their communities, including neighborhoods with low or moderate incomes. JPMorgan Chase is a national leader in community development by providing loans, investments and community development services in communities across the United States.

At June 30, 2011, and December 31, 2010, the Firm's CRA loan portfolio was approximately \$15 billion and \$16 billion, respectively. At June 30, 2011, and December 31, 2010, 65%, respectively, of the CRA portfolio were residential mortgage loans at both periods; 16% and 15%, respectively, were business banking loans; 13% and 14%, respectively, were commercial real estate loans; and 6%, respectively, were other loans at both periods. CRA nonaccrual loans were 6% of the Firm's nonaccrual loans at both June 30, 2011, and December 31, 2010, respectively. Net charge-offs in the CRA portfolio were 3% and 2%, respectively, of the Firm's net charge-offs for the three months ended June 30, 2011 and 2010. For the six months ended June 30, 2011 and 2010, the net charge-offs in the CRA portfolio were 3% and 2%, respectively, of the Firm's net charge-offs.

ALLOWANCE FOR CREDIT LOSSES

JPMorgan Chase's allowance for loan losses covers the wholesale (risk-rated), and consumer (primarily scored) portfolios. The allowance represents management's estimate of probable credit losses inherent in the Firm's loan portfolio. Management also determines an allowance for wholesale and consumer (excluding credit card) lending-related commitments using a methodology similar to that used for the wholesale loans.

For a further discussion of the components of the allowance for credit losses, see Critical Accounting Estimates Used by the Firm on pages 92–95 and Note 14 on pages 149–150 of this Form 10-Q.

At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer, the Chief Financial Officer and the Controller of the Firm and discussed with the Risk Policy and Audit Committees of the Board of Directors of the Firm. As of June 30, 2011, JPMorgan Chase deemed the allowance for credit losses to be appropriate (i.e., sufficient to absorb losses inherent in the portfolio).

The allowance for credit losses was \$29.1 billion at June 30, 2011, a decrease of \$3.8 billion from \$33.0 billion at December 31, 2010. The credit card allowance for loan losses decreased by \$3.0 billion from December 31, 2010, primarily as a result of lower estimated losses. The wholesale allowance for loan losses decreased by \$670 million from December 31, 2010, primarily related to the impact of loan sales and net repayments.

The allowance for lending-related commitments for both the wholesale and consumer excluding, credit card, portfolios which is reported in other liabilities, totaled \$626 million and \$717 million at June 30, 2011, and December 31, 2010, respectively.

The credit ratios in the table below are based on retained loan balances, which exclude loans held-for-sale and loans accounted for at fair value.

Summary of changes in the allowance for credit losses

	2011				2010			
Six months ended June 30, (in millions, except ratios)	Wholesale	Consumer, excluding credit card	Credit card	Total	Wholesale	Consumer, excluding credit card	Credit card	Total

Allowance for loan losses to retained nonaccrual loans ^{(d)(f)}	122	137	NM	201	97	127	NM	209
Allowance for loan losses to retained nonaccrual loans excluding credit card ^{(d)(f)}	122	137	NM	133	97	127	NM	117

- Effective January 1, 2010, the Firm adopted accounting guidance related to VIEs. Upon adoption of the guidance, the Firm consolidated its sponsored credit card securitization trusts, its administered multi-seller conduits and (a) certain other consumer loan securitization entities, primarily mortgage-related. As a result, \$7.4 billion, \$14 million and \$127 million, respectively, of allowance for loan losses were recorded on-balance sheet with the consolidation of these entities. For further discussion, see Note 16 on pages 244–259 of JPMorgan Chase’s 2010 Annual Report.
- (b) Includes risk-rated loans that have been placed on nonaccrual status and loans that have been modified in a TDR.
- (c) The asset-specific consumer, excluding credit card allowance for loan losses included TDR reserves of \$962 million and \$946 million at June 30, 2011, and 2010, respectively.
- (d) The Firm’s policy is generally to exempt credit card loans from being placed on nonaccrual status as permitted by regulatory guidance. Under the guidance issued by the FFIEC, credit card loans are charged off by the end of the month in which the account becomes 180 days past due or within 60 days from receiving notification about a

specified event (e.g., bankruptcy of the borrower), whichever is earlier.

- (e) Charge-offs are not recorded on PCI loans until actual losses exceed estimated losses recorded as purchase accounting adjustments at the time of acquisition.
- (f) Excludes the impact of PCI loans acquired as part of the Washington Mutual transaction.

Provision for credit losses

For the three and six months ended June 30, 2011, the provision for credit losses was \$1.8 billion and \$3.0 billion, respectively, down 46% and 71%, respectively from the prior year periods. The consumer, excluding credit card, provision for credit losses was \$1.1 billion and \$2.4 billion, down 35% and 55%, respectively, from the prior year periods, reflecting improving delinquency and charge-off trends in 2011 across most portfolios. The credit card provision for credit losses was \$810 million and \$1.0 billion, down 64% and 82%, respectively, from the prior year periods, driven primarily by improved delinquency and net credit loss trends. The credit card three and six months provision also benefited from a reduction in the allowance for loan losses for both the prior and current year periods. The wholesale provision for credit losses had lower benefits of \$117 million and \$503 million, compared with benefits of \$572 million and \$808 million in the prior-year periods, primarily reflecting continued improvement in the credit environment from the year-ago period. The current-quarter benefit reflected a reduction in the allowance for loan losses, primarily due to net repayments.

Three months ended June 30,	Provision for loan losses		Provision for lending-related commitments		Total provision for credit losses

MARKET RISK MANAGEMENT

For a discussion of the Firm's market risk management organization, major market risk drivers and classification of risks, see pages 142–146 of JPMorgan Chase's 2010 Annual Report.

Value-at-risk

JPMorgan Chase utilizes VaR, a statistical risk measure, to estimate the potential loss from adverse market moves. Each business day, as part of its risk management activities, the Firm undertakes a comprehensive VaR calculation that includes the majority of its material market risks. VaR provides a consistent cross-business measure of risk profiles and levels of diversification and is used for comparing risks across businesses and monitoring limits. These VaR results are reported to senior management and regulators, and they are utilized in regulatory capital calculations. The Firm calculates VaR to estimate possible economic outcomes for its current positions using historical simulation, which measures risk across instruments and portfolios in a consistent, comparable way. The simulation is based on data for the previous 12 months. This approach assumes that historical changes in market values are representative of the distribution of potential outcomes in the immediate future. VaR is calculated using a one day time horizon and an expected tail-loss methodology, and approximates a 95% confidence level. This means the Firm would expect to incur losses greater than that predicted by VaR estimates five times in every 100 trading days, or about 12 to 13 times a

year. The Firm's VaR calculation is highly granular and incorporates numerous risk factors, which are selected based on the risk profile of each portfolio.

The table below shows the results of the Firm's VaR measure using a 95% confidence level.

Total IB trading VaR by risk type, credit portfolio VaR and other VaR

(in millions)	Three months ended June 30,						At June 30,		Six months ended June 30, Average

Diversification benefit to total IB and other VaR	(44) ^(a)	NM ^(b)	NM ^(b)	(79) ^(a)	NM ^(b)	NM ^(b)	(29) ^(a)	(59) ^(a)	(51) ^(a)	(73) ^(a)
Total IB and other VaR	\$94	\$82	\$107	\$93	\$66	\$133	\$82	\$114	\$91	\$95

Average VaR and period-end VaR were less than the sum of the VaR of the components described above, which is due to portfolio diversification. The diversification effect reflects the fact that the risks were not perfectly correlated. The risk of a portfolio of positions is therefore usually less than the sum of the risks of the positions themselves.

Designated as not meaningful ("NM"), because the minimum and maximum may occur on different days for different risk components, and hence it is not meaningful to compute a portfolio-diversification effect.

VaR Measurement

IB trading VaR includes substantially all trading activities in IB, including the credit spread sensitivities of certain mortgage products and syndicated lending facilities that the Firm intends to distribute. The Firm uses proxies to estimate the VaR for these products since daily time series are largely not available. It is likely that using an actual price-based time series for these products, if available, would affect the VaR results presented. In addition, for certain products included in IB trading and credit portfolio VaR, particular risk parameters are not fully captured – for example, correlation risk.

Credit portfolio VaR includes the derivative CVA, hedges of the CVA and mark-to-market (“MTM”) hedges of the retained loan portfolio, which are reported in principal transactions revenue. However, Credit portfolio VaR does not include the retained portfolio, which is not MTM.

Other VaR includes certain positions employed as part of the Firm’s risk management function within the Chief Investment Office (“CIO”) and in the Mortgage Banking business. CIO VaR includes positions, primarily in debt securities and credit products, used to manage structural and other risks including interest rate, credit and mortgage risks arising from the Firm’s ongoing business activities. Mortgage Banking VaR includes the Firm’s mortgage pipeline and warehouse loans, MSRs and all related hedges.

As noted above, IB, Credit portfolio and other VaR does not include the retained credit portfolio, which is not marked to market; however, it does include hedges of those positions. It also does not include debit valuation adjustments (“DVA”) taken on derivative and structured liabilities to reflect the credit quality of the Firm, principal investments (mezzanine financing, tax-oriented investments, etc.), and certain securities and investments held by the Corporate/Private Equity line of business, including private equity investments, capital management positions and longer-term investments managed by CIO. These longer-term positions are managed through the Firm’s earnings at risk and other cash flow monitoring processes, rather than by using a VaR measure. Principal investing activities and Private Equity positions are managed using stress and scenario analyses. See the DVA Sensitivity table on page 91 of this Form 10-Q for further details. For a discussion of Corporate/Private Equity, see pages 46–47 of this Form 10-Q.

Second-quarter and year-to-date 2011 VaR results

As presented in the table, average total IB and other VaR increased slightly for the three months ended June 30, 2011, when compared with the respective 2010 period. This increase was driven by a reduction in the Firm's average IB and other VaR diversification benefit. For the six months ended June 30, 2011, average total IB and other VaR decreased for the comparable 2010 period. This decrease was driven by reduced market volatility as well as position changes. Average total IB trading and credit portfolio VaR for the three and six months ended June 30, 2011, decreased compared with the respective 2010 periods. These decreases were driven primarily by reduced market volatility as well as position changes.

CIO VaR and Mortgage Banking VaR for the three months and six months ended June 30, 2011, decreased for the comparable 2010 periods. The decreases in CIO and Mortgage Banking VaR also were driven by reduced market volatility as well as position changes.

The Firm's average IB and other VaR diversification benefit was \$44 million or 32% of the sum for the three months ended June 30, 2011, compared with \$79 million or 46% of the sum for the three months ended June 30, 2010. The Firm's average IB and other VaR diversification benefit was \$51 million or 36% of the sum for the six months ended June 30, 2011, compared with \$73 million or 43% of the sum for the six months ended June 30, 2010. In general, over the course of the year, VaR exposure can vary significantly as positions change, market volatility fluctuates and diversification benefits change.

VaR back-testing

The Firm conducts daily back-testing of VaR against its market risk-related revenue, which is defined as the change in value of: principal transactions revenue for IB and CIO (less Private Equity gains/losses and revenue from longer-term CIO investments); trading-related net interest income for IB, CIO and Mortgage Banking; IB brokerage commissions, underwriting fees or other revenue; revenue from syndicated lending facilities that the Firm intends to distribute; and mortgage fees and related income for the Firm's mortgage pipeline and warehouse loans, MSR's, and all related hedges. Daily firmwide market risk-related revenue excludes gains and losses from DVA.

The following histogram illustrates the daily market risk-related gains and losses for IB, CIO and Mortgage Banking positions for the first six months of 2011. The chart shows that the Firm posted market risk-related gains on 127 of the 129 days in this period, with four days exceeding \$200 million. The inset graph looks at those days on which the Firm experienced losses and depicts the amount by which the VaR exceeded the actual loss on each of those days. Losses were sustained on two days during the six months ended June 30, 2011, none of which exceeded the VaR measure.

The following table provides information about the gross sensitivity of DVA to a one-basis-point increase in JPMorgan Chase's credit spreads. This sensitivity represents the impact from a one-basis-point parallel shift in JPMorgan Chase's entire credit curve. As credit curves do not typically move in a parallel fashion, the sensitivity multiplied by the change in spreads at a single maturity point may not be representative of the actual revenue recognized.

Debit valuation adjustment sensitivity

(in millions)	One basis-point increase in JPMorgan Chase's credit spread
June 30, 2011	\$36
December 31, 2010	35

Economic-value stress testing

While VaR reflects the risk of loss due to adverse changes in markets using recent historical market behavior as an indicator of losses, stress testing captures the Firm's exposure to unlikely but plausible events in abnormal markets using multiple scenarios that assume significant changes in credit spreads, equity prices, interest rates, currency rates or commodity prices. Scenarios are updated dynamically and may be redefined on an ongoing basis to reflect current market conditions. Along with VaR, stress testing is important in measuring and controlling risk; it enhances understanding of the Firm's risk profile and loss potential, as stress losses are monitored against limits. Stress testing is also employed in cross-business risk management. Stress-test results, trends and explanations based on current market risk positions are reported to the Firm's senior management and to the lines of business to allow them to better understand event risk-sensitive positions and manage risks with more transparency.

Nontrading interest rate-sensitive revenue-at-risk (i.e., "earnings-at-risk")

Interest rate risk represents one of the Firm's significant market risk exposures. This risk arises not only from trading activities but also from the Firm's traditional banking activities which include extension of loans and credit facilities, taking deposits and issuing debt. The Firm manages this interest rate risk generally through its investment securities portfolio and related derivatives. The Firm evaluates its nontrading interest rate risk exposure through the stress testing of earnings-at-risk, which measures the extent to which changes in interest rates will affect the Firm's net interest income and interest rate-sensitive fees ("nontrading interest rate-sensitive revenue"). Earnings-at-risk excludes the impact of trading activities and MSRs as these sensitivities are captured under VaR. For further discussion on interest rate exposure, see Earnings-at-risk stress testing on pages 145–146 of JPMorgan Chase's 2010 Annual Report. The Firm conducts simulations of changes in nontrading interest rate-sensitive revenue under a variety of interest rate scenarios. Earnings-at-risk tests measure the potential change in this revenue, and the corresponding impact to the Firm's pretax earnings, over the following 12 months. These tests highlight exposures to various interest rate-sensitive factors, such as the rates themselves (e.g., the prime lending rate), pricing strategies on deposits, optionality and changes in product mix. The tests include forecasted balance sheet changes, such as asset sales and securitizations, as well as prepayment and reinvestment behavior. Mortgage prepayment assumptions are based on current interest rates compared with underlying contractual rates, the time since origination, and other factors which are updated periodically based on historical experience and forward market expectations. The balance and pricing assumptions of deposits that have no stated maturity are based on historical performance, the competitive environment, customer behavior, and product mix.

Immediate changes in interest rates present a limited view of risk, and so a number of alternative scenarios are also reviewed. These scenarios include the implied forward curve, nonparallel rate shifts and severe interest rate shocks on selected key rates. These scenarios are intended to provide a comprehensive view of JPMorgan Chase's earnings at risk over a wide range of outcomes.

JPMorgan Chase's 12-month pretax earnings sensitivity profiles.

(Excludes the impact of trading activities and MSRs)

(in millions)	Immediate change in rates			
	+200bp	+100bp	-100bp	-200bp
June 30, 2011	\$3,595	\$2,062	NM	(a) NM (a)

December 31, 2010	2,465	1,483	NM	(a)	NM	(a)
-------------------	-------	-------	----	-----	----	-----

(a) Downward 100- and 200-basis-point parallel shocks result in a Fed Funds target rate of zero and negative three- and six-month treasury rates. The earnings-at-risk results of such a low-probability scenario are not meaningful.

The change in earnings at risk from December 31, 2010, resulted from investment portfolio repositioning and an assumed higher level of deposit balances. The Firm's risk to rising rates was largely the result of widening deposit margins, which are currently compressed due to very low short-term interest rates.

Additionally, under another interest rate scenario used by the Firm – involving a steeper yield curve with long-term rates rising by 100 basis points and short-term rates staying at current levels – results in a 12-month pretax earnings benefit of \$980 million. The increase in earnings under this scenario is due to reinvestment of maturing assets at the higher long-term rates, with funding costs remaining unchanged.

PRIVATE EQUITY RISK MANAGEMENT

For a discussion of Private Equity Risk Management, see page 147 of JPMorgan Chase's 2010 Annual Report. At June 30, 2011, and December 31, 2010, the carrying value of the Private Equity portfolio was \$8.8 billion and \$8.7 billion, respectively, of which \$670 million and \$875 million, respectively, represented securities with publicly available market quotations.

OPERATIONAL RISK MANAGEMENT

For a discussion of JPMorgan Chase's Operational Risk Management, see pages 147–148 of JPMorgan Chase's 2010 Annual Report.

REPUTATION AND FIDUCIARY RISK MANAGEMENT

For a discussion of the Firm's Reputation and Fiduciary Risk Management, see page 148 of JPMorgan Chase's 2010 Annual Report.

SUPERVISION AND REGULATION

The following discussion should be read in conjunction with Regulatory developments on pages 9–10 of this Form 10-Q, and Supervision and Regulation section on pages 1–5 of JPMorgan Chase's 2010 Form 10-K.

Dividends

At June 30, 2011, JPMorgan Chase's banking subsidiaries could pay, in the aggregate, \$4.1 billion in dividends to their respective bank holding companies without the prior approval of their relevant banking regulators.

CRITICAL ACCOUNTING ESTIMATES USED BY THE FIRM

JPMorgan Chase's accounting policies and use of estimates are integral to understanding its reported results. The Firm's most complex accounting estimates require management's judgment to ascertain the value of assets and liabilities. The Firm has established detailed policies and control procedures intended to ensure that valuation methods, including any judgments made as part of such methods, are well-controlled, independently reviewed and applied consistently from period to period. In addition, the policies and procedures are intended to ensure that the process for changing methodologies occurs in an appropriate manner. The Firm believes its estimates for determining the value of its assets and liabilities are appropriate. The following is a brief description of the Firm's critical accounting estimates involving significant valuation judgments.

Allowance for credit losses

JPMorgan Chase's allowance for credit losses covers the retained wholesale and consumer loan portfolios, as well as the Firm's wholesale and consumer lending-related commitments. The allowance for loan losses is intended to adjust the value of the Firm's loan assets to reflect probable credit losses inherent in the portfolio as of the balance sheet date. The allowance for lending-related commitments is established to cover probable losses in the lending-related commitments portfolio. For a further discussion of the methodologies used in establishing the Firm's allowance for credit losses, see Allowance for Credit Losses on pages 149–150 and Note 15 on pages 239–243 of JPMorgan Chase's 2010 Annual Report; for amounts recorded as of June 30, 2011 and 2010, see Allowance for Credit Losses on pages 86–88 and Note 14 on pages 149–150 of this Form 10-Q.

As noted in the discussion on page 149 of JPMorgan Chase's 2010 Annual Report, the Firm's allowance for credit losses is sensitive to several factors, depending on the portfolio. The Firm's consumer loan portfolio is sensitive to changes in the economic environment, delinquency status, the realizable value of collateral, FICO scores, borrower behavior and other risk factors, while the Firm's wholesale loan portfolio is sensitive to the estimated credit quality of individual loans, as expressed in the assigned risk ratings. Significant judgment is required to estimate the allowance for credit losses for each portfolio segment, considering all relevant factors. For example, the credit performance of the consumer portfolio across the entire consumer credit product spectrum has improved, particularly in credit card,

but high unemployment and weak overall economic conditions continued to result in an elevated number of residential real estate loans that charge-off, and weak housing prices continued to negatively affect the severity of losses recognized on residential real estate loans that default. Significant judgment is required to estimate the duration and

severity of the recent economic downturn, as well as its potential impact on housing prices and the labor market. Ongoing weak economic conditions, combined with elevated delinquencies and ongoing discussions regarding mortgage foreclosure-related matters with federal and state officials, continue to result in a high level of uncertainty in the residential real estate portfolio.

Changes in economic conditions or in the Firm's assumptions could affect the Firm's estimate of probable losses inherent in the portfolio at the balance sheet date. For example, deterioration in the following inputs would have the following effects on the Firm's loss estimates as of June 30, 2011, without consideration of any offsetting or correlated effects of other inputs in the Firm's allowance for loan losses:

A one-notch downgrade in the Firm's internal risk ratings for its entire wholesale loan portfolio could imply an increase in loss estimates of approximately \$1.9 billion.

A further 5% decline in home prices, beyond current assumptions, derived from a nationally recognized home price index could imply an increase to modeled annual loss estimates for the residential real estate portfolio, excluding PCI loans, of approximately \$0.5 billion.

A 50 basis point deterioration in forecasted credit card loss rates could imply an increase to modeled annualized credit card loan loss estimates of approximately \$0.6 billion.

The purpose of these sensitivity analyses is to provide an indication of the isolated impacts of hypothetical alternative assumptions on credit loss estimates. The changes in the inputs presented above are not intended to imply management's expectation of future deterioration of those risk factors.

It is difficult to estimate how potential changes in specific factors might affect the allowance for credit losses because management considers a variety of factors and inputs in estimating the allowance for credit losses. Changes in these factors and inputs may not occur at the same rate and may not be consistent across all geographies or product types, and changes in factors may be directionally inconsistent, such that improvement in one factor may offset deterioration in other factors. In addition, it is difficult to predict how changes in specific economic conditions or assumptions could affect borrower behavior or other factors considered by management in estimating the allowance for credit losses. Given the process the Firm follows in evaluating the risk factors related to its loans, including risk ratings, home price assumptions, and credit card loss estimates, management believes that its current estimate of the allowance for credit loss is appropriate.

Fair value of financial instruments, MSRs and commodities inventory

JPMorgan Chase carries a portion of its assets and liabilities at fair value. The majority of such assets and liabilities are measured at fair value on a recurring basis. Certain assets and liabilities are measured at fair value on a nonrecurring basis, including loans accounted for at the lower of cost or fair value that are only subject to fair value adjustments under certain circumstances.

Assets measured at fair value

The following table includes the Firm's assets measured at fair value and the portion of such assets that are classified within level 3 of the valuation hierarchy.

(in billions)	June 30, 2011		December 31, 2010	
	Total assets at fair value	Total level 3 assets	Total assets at fair value	Total level 3 assets
Trading debt and equity instruments ^(a)	\$381.3	\$32.8	\$409.4	\$34.6
Derivative receivables – gross	1,392.4	34.2	1,529.4	34.6
Netting adjustment	(1,315.0)	—	(1,448.9)	—
Derivative receivables – net	77.4	34.2	80.5	34.6
AFS securities	324.7	15.9	316.3	14.3
Loans	2.0	1.5	2.0	1.5
MSRs	12.2	12.2	13.6	13.6
Private equity investments	8.7	8.0	8.7	7.9
Other ^(b)	46.0	4.5	43.8	4.1
Total assets measured at fair value on a recurring basis	852.3	109.1	874.3	110.6
Total assets measured at fair value on a nonrecurring basis ^(c)	3.9	0.7	9.9	4.0

Edgar Filing: J P MORGAN CHASE & CO - Form 10-Q

Total assets measured at fair value	\$856.2	\$109.8	(e)	\$884.2	\$114.6	(e)
Total Firm assets	\$2,246.8			\$2,117.6		
Level 3 assets as a percentage of total Firm assets		5	%		5	%
Level 3 assets as a percentage of total Firm assets at fair value		13	%		13	%

(a) Includes physical commodities generally carried at the lower of cost or fair value.

(b) Includes certain securities purchased under resale agreements, securities borrowed, accrued interest receivable and other investments.

(c) Predominantly includes mortgage, home equity and other loans, where the carrying value is based on the fair value of the underlying collateral, carried on the Consolidated Balance Sheets at the lower of cost or fair value at June 30, 2011, and December 31, 2010; and includes credit card loans carried on the Consolidated Balance Sheet at the lower of cost or fair value at December 31, 2010.

Derivative receivable and derivative payable balances, and the related cash collateral received and paid, are presented net on the Consolidated Balance Sheets where there is a legally enforceable master netting agreement in place with counterparties. For purposes of the table above, the Firm does not reduce level 3 derivative receivable balances for netting adjustments, as such an adjustment is not relevant to a presentation based on the transparency (d) of inputs to the valuation. Therefore, the derivative balances reported in the fair value hierarchy levels are gross of any counterparty netting adjustments. However, if the Firm were to net such balances within level 3, the reduction in the level 3 derivative receivable and payable balances would be \$13.5 billion and \$12.7 billion at June 30, 2011, and December 31, 2010, respectively, exclusive of the netting benefit associated with cash collateral, which would further reduce the level 3 balances.

(e) At June 30, 2011, and December 31, 2010, included \$63.1 billion and \$66.0 billion, respectively, of level 3 assets, consisting of recurring and nonrecurring assets carried by IB.

Valuation

For instruments classified within level 3 of the hierarchy, judgments used to estimate fair value may be significant. In arriving at an estimate of fair value for an instrument within level 3, management must first determine the appropriate model to use. Second, due to the lack of observability of significant inputs, management must assess all relevant empirical data in deriving valuation inputs – including, but not limited to, yield curves, interest rates, volatilities, equity or debt prices, foreign exchange rates and credit curves. In addition to market information, models also incorporate transaction details, such as maturity. Finally, management judgment must be applied to assess the appropriate level of valuation adjustments to reflect counterparty credit quality, the Firm's creditworthiness, constraints on liquidity and unobservable parameters, where relevant. The judgments made are typically affected by the type of product and its specific contractual terms, and the level of liquidity for the product or within the market as a whole. For further discussion of changes in level 3 assets, see Note 3 on pages 102–114 of this Form 10-Q.

Imprecision in estimating unobservable market inputs can affect the amount of revenue or loss recorded for a particular position. Furthermore, while the Firm believes its valuation methods are appropriate and consistent with those of other market participants, the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date. For a detailed discussion of the determination of fair value for individual financial instruments, see Note 3 on pages 170–187 of JPMorgan Chase's 2010 Annual Report.

Purchased credit-impaired loans

In connection with the Washington Mutual transaction, JPMorgan Chase acquired certain loans with evidence of deterioration of credit quality since origination and for which it was probable, at acquisition, that the Firm would be unable to collect all contractually required payments receivable. These loans are considered to be PCI loans and are accounted for as described in Note 14 on pages 220–238 of JPMorgan Chase's 2010 Annual Report. The application of the accounting guidance for PCI loans requires a number of significant estimates and judgments, such as determining: (i) which loans are within the scope of PCI accounting guidance, (ii) the fair value of the PCI loans at acquisition, (iii) how loans are aggregated to apply the guidance on accounting for pools of loans, and (iv) estimates of cash flows to be collected over the term of the loans. For additional information on PCI loans, including the significant assumptions, estimates and judgment involved, see PCI loans on pages 152–153 of JPMorgan Chase's 2010 Annual Report and Note 14 on pages 149–150 of this Form 10-Q.

As of June 30, 2011, the carrying value of the aggregate portfolio of PCI loans incorporates assumptions about home prices derived from a nationally recognized home price index; this index reflects a further 5% decline in housing prices based on the geographic distribution of the PCI portfolio. An adverse home price scenario (reflecting an additional 5% decline in housing prices beyond that already assumed) could imply an increase in credit loss estimates for these loans of approximately \$1.5 billion.

Goodwill impairment

Management applies significant judgment when testing goodwill for impairment. For a description of the significant valuation judgments associated with goodwill impairment, see Goodwill impairment on page 153 of JPMorgan Chase's 2010 Annual Report.

During the six months ended June 30, 2011, the Firm updated the discounted cash flow valuations of certain consumer lending businesses in RFS and CS, which continue to have elevated risk for goodwill impairment due to their exposure to U.S. consumer credit risk and the effects of regulatory and legislative changes. The assumptions used in the valuation of these businesses include (a) estimates of future cash flows for the business (which are dependent on portfolio outstanding balances, net interest margin, operating expense, credit losses and the amount of capital necessary given the risk of business activities to meet regulatory capital requirements), and (b) the cost of equity used to discount those cash flows to a present value. Each of these factors requires significant judgment and the assumptions used are based on management's best estimate and most current projections, including the anticipated effects of regulatory and legislative changes, derived from the Firm's business forecasting process reviewed with senior management. These projections are consistent with the short-term assumptions discussed in the Business Outlook on pages 8–9 of this Form 10-Q, and, in the longer term, incorporate a set of macroeconomic assumptions and the Firm's best estimates of long-term growth and returns of its businesses. Where possible, the Firm uses third-party and peer data to benchmark its assumptions and estimates.

In addition, for its other businesses, the Firm reviewed current conditions (including the estimated effects of regulatory and legislative changes) and prior projections of business performance. Based upon the updated valuations for its consumer lending businesses and reviews of its other businesses, the Firm concluded that goodwill allocated to all of its reporting units was not impaired at June 30, 2011. However, the fair value of the Firm's consumer lending businesses in RFS and CS each exceeded their carrying values by less than 15% and the associated goodwill of such lines of business remains at an elevated risk of impairment due to each businesses' exposure to U.S. consumer credit risk and the effects of economic, regulatory and legislative changes.

Deterioration in economic market conditions, increased estimates of the effects of recent regulatory or legislative changes, or additional regulatory or legislative changes may result in declines in projected business performance beyond management's current expectations. For example, in RFS, such declines could result from increases in costs to resolve foreclosure-related matters or from deterioration in economic conditions that result in increased credit losses, including decreases in home prices beyond management's current expectations. In CS, declines in business performance could result from deterioration in economic conditions such as increased unemployment claims or bankruptcy filings that result in increased credit losses or changes in customer behavior that cause decreased account activity or receivable balances. Such declines in business performance, increases in equity capital requirements, or increases in the estimated cost of equity, could cause the estimated fair values of the Firm's reporting units or their associated goodwill to decline, which could result in a material impairment charge to earnings in a future period related to some portion of the associated goodwill.

For additional information on goodwill, see Note 16 on pages 159–163 of this Form 10-Q.

Income taxes

For a description of the significant assumptions, judgments and interpretations associated with the accounting for income taxes, see Income taxes on page 154 of JPMorgan Chase's 2010 Annual Report.

Litigation reserves

For a description of the significant estimates and judgments associated with establishing litigation reserves, see Note 23 on pages 172–179 of this Form 10-Q, and Note 32 on pages 282–289 of JPMorgan Chase's 2010 Annual Report.

ACCOUNTING AND REPORTING DEVELOPMENTS

Fair value measurements and disclosures

In January 2010, the FASB issued guidance that requires new disclosures, and clarifies existing disclosure requirements, about fair value measurements. The clarifications and the requirement to separately disclose transfers of instruments between level 1 and level 2 of the fair value hierarchy are effective for interim reporting periods beginning after December 15, 2009; the Firm adopted this guidance in the first quarter of 2010. For additional information about the impact of the adoption of the new fair value measurements guidance, see Note 3 on pages 102–114 of this Form 10-Q. In addition, a new requirement to provide purchases, sales, issuances and settlements in the level 3 rollforward on a gross basis is effective for fiscal years beginning after December 15, 2010. The Firm adopted the new guidance, effective January 1, 2011.

In May 2011, the FASB issued guidance that amends the requirements for fair value measurement and disclosure. The guidance changes and clarifies certain existing requirements related to portfolios of financial instruments and valuation adjustments and requires additional disclosures for fair value measurements categorized in level 3 of the fair value hierarchy (including disclosure of the range of inputs used in certain valuations) and for financial instruments that are not carried at fair value but for which fair value is required to be disclosed. The guidance is effective in the first quarter of 2012. The Firm is currently assessing the impact of this guidance.

Disclosures about the credit quality of financing receivables and the allowance for credit losses

In July 2010, the FASB issued guidance that requires enhanced disclosures surrounding the credit characteristics of the Firm's loan portfolio. Under the new guidance, the Firm is required to disclose its accounting policies; the methods it uses to determine the components of the allowance for credit losses; and qualitative and quantitative information about the credit risk inherent in the loan portfolio, including additional information on certain types of loan modifications. For the Firm, the new disclosures, other than those related to loan modifications, became effective for the 2010 Annual Report. For additional information, see Notes 13 and 14 on pages 134–148 and 149–150 of this Form 10-Q. The adoption of this guidance only affected JPMorgan Chase's disclosures of financing receivables and not its Consolidated Balance Sheets or results of operations. New disclosures regarding TDRs will become effective for the 2011 third quarter.

Determining whether a restructuring is a troubled debt restructuring

In April 2011, the FASB issued guidance to clarify existing standards for determining whether a restructuring represents a TDR from the perspective of the creditor. The guidance is effective in the third quarter of 2011 and must be applied retrospectively to January 1, 2011. The Firm does not expect that the implementation of this new guidance will have a significant impact on the Firm's Consolidated Balance Sheets or results of operations.

Accounting for repurchase and similar agreements

In April 2011, the FASB issued guidance that amends the criteria used to assess whether repurchase and similar agreements should be accounted for as financings or sales (purchases) with forward agreements to repurchase (resell). Specifically, the guidance eliminates circumstances in which the lack of adequate collateral maintenance requirements could result in a repurchase agreement being accounted for as a sale. The guidance is effective for new transactions or existing transactions that are modified beginning January 1, 2012. The Firm has accounted for its repurchase and similar agreements as secured financings, and therefore, the Firm does not expect the application of this guidance will have an impact on the Firm's Consolidated Balance Sheets or results of operations.

Presentation of other comprehensive income

In June 2011, the FASB issued guidance that modifies the presentation of other comprehensive income in the Consolidated Financial Statements. The guidance requires that items of net income, items of other comprehensive income, and total comprehensive income be presented in one continuous statement or in two separate but consecutive statements. For public companies the guidance is effective for interim and annual reporting periods beginning after December 15, 2011. The application of this guidance will only affect the presentation of the Consolidated Financial Statements and will have no impact on the Firm's Consolidated Balance Sheets or results of operations.

FORWARD-LOOKING STATEMENTS

From time to time, the Firm has made and will make forward-looking statements. These statements can be identified by the fact that they do not relate strictly to historical or current facts. Forward-looking statements often use words such as “anticipate,” “target,” “expect,” “estimate,” “intend,” “plan,” “goal,” “believe,” or other words of similar meaning. Forward-looking statements provide JPMorgan Chase’s current expectations or forecasts of future events, circumstances, results or aspirations. JPMorgan Chase’s disclosures in this Form 10-Q contain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. The Firm also may make forward-looking statements in its other documents filed or furnished with the Securities and Exchange Commission. In addition, the Firm’s senior management may make forward-looking statements orally to analysts, investors, representatives of the media and others.

All forward-looking statements are, by their nature, subject to risks and uncertainties, many of which are beyond the Firm’s control. JPMorgan Chase’s actual future results may differ materially from those set forth in its forward-looking statements. While there is no assurance that any list of risks and uncertainties or risk factors is complete, below are certain factors which could cause actual results to differ from those in the forward-looking statements:

- Local, regional and international business, economic and political conditions and geopolitical events;
- Changes in laws and regulatory requirements, including as a result of the newly-enacted financial services legislation;
- Changes in trade, monetary and fiscal policies and laws;
- Securities and capital markets behavior, including changes in market liquidity and volatility;
- Changes in investor sentiment or consumer spending or savings behavior;
- Ability of the Firm to manage effectively its liquidity;
- Changes in credit ratings assigned to the Firm or its subsidiaries;
- Damage to the Firm’s reputation;
- Ability of the Firm to deal effectively with an economic slowdown or other economic or market disruption;
- Technology changes instituted by the Firm, its counterparties or competitors;
- Mergers and acquisitions, including the Firm’s ability to integrate acquisitions;
- Ability of the Firm to develop new products and services, and the extent to which products or services previously sold by the Firm (including but not limited to mortgages and asset-backed securities) require the Firm to incur liabilities or absorb losses not contemplated at their initiation or origination;
- Ability of the Firm to address enhanced regulatory requirements affecting its mortgage business;
- Acceptance of the Firm’s new and existing products and services by the marketplace and the ability of the Firm to increase market share;
- Ability of the Firm to attract and retain employees;
- Ability of the Firm to control expense;
- Competitive pressures;
- Changes in the credit quality of the Firm’s customers and counterparties;
- Adequacy of the Firm’s risk management framework;
- Adverse judicial or regulatory proceedings;
- Changes in applicable accounting policies;
- Ability of the Firm to determine accurate values of certain assets and liabilities;
- Occurrence of natural or man-made disasters or calamities or conflicts, including any effect of any such disasters, calamities or conflicts on the Firm’s power generation facilities and the Firm’s other commodity-related activities;
- The other risks and uncertainties detailed in Part II, Item 1A: Risk Factors on pages 192–193 of this Form 10-Q, and in Part I, Item 1A: Risk Factors on pages 5–12 of the 2010 Form 10-K.

Any forward-looking statements made by or on behalf of the Firm speak only as of the date they are made, and JPMorgan Chase does not undertake to update forward-looking statements to reflect the impact of circumstances or events that arise after the date the forward-looking statements were made. The reader should, however, consult any further disclosures of a forward-looking nature the Firm may make in any subsequent Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, or Current Reports on Form 8-K.

JPMORGAN CHASE & CO.

Total liabilities and stockholders' equity	\$2,246,764	\$2,117,605

Edgar Filing: J P MORGAN CHASE & CO - Form 10-Q

The following table presents information on assets and liabilities related to VIEs that are consolidated by the Firm (a) at June 30, 2011, and December 31, 2010. The difference between total VIE assets and liabilities represents the Firm's interests in those entities, which were eliminated in consolidation.

	June 30, 2011	December 31, 2010
Assets		
Trading assets	\$7,124	\$9,837
Loans	80,387	95,587
All other assets	2,675	3,494
Total assets	\$90,186	\$108,918
Liabilities		
Beneficial interests issued by consolidated variable interest entities	\$67,457	\$77,649
All other liabilities	1,587	1,922
Total liabilities	\$69,044	\$79,571

The assets of the consolidated VIEs are used to settle the liabilities of those entities. The holders of the beneficial interests do not have recourse to the general credit of JPMorgan Chase. At both June 30, 2011, and December 31, 2010, the Firm provided limited program-wide credit enhancement of \$2.0 billion related to its Firm-administered multi-seller conduits. For further discussion, see Note 15 on pages 151–159 of this Form 10-Q.

Note: Effective January 1, 2010, the Firm adopted accounting guidance related to VIEs. Upon adoption of the guidance, the Firm consolidated noncash assets and liabilities of \$87.7 billion and \$92.2 billion, respectively.

The Notes to Consolidated Financial Statements (unaudited) are an integral part of these statements.

See Glossary of Terms on pages 186–189 of this Form 10-Q for definitions of terms used throughout the Notes to Consolidated Financial Statements.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Unaudited)

NOTE 1 – BASIS OF PRESENTATION

JPMorgan Chase & Co. (“JPMorgan Chase” or the “Firm”), a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States of America (“U.S.”), with operations in more than 60 countries. The Firm is a leader in investment banking, financial services for consumers and small business, commercial banking, financial transaction processing, asset management and private equity. For a discussion of the Firm's business-segment information, see Note 24 on pages 180–182 of this Form 10-Q.

The accounting and financial reporting policies of JPMorgan Chase and its subsidiaries conform to accounting principles generally accepted in the U.S. (“U.S. GAAP”). Additionally, where applicable, the policies conform to the accounting and reporting guidelines prescribed by bank regulatory authorities.

The unaudited consolidated financial statements prepared in conformity with U.S. GAAP require management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenue and expense, and the disclosures of contingent assets and liabilities. Actual results could be different from these estimates. In the opinion of management, all normal, recurring adjustments have been included for a fair statement of this interim financial information.

These unaudited consolidated financial statements should be read in conjunction with the audited consolidated financial statements, and related notes thereto, included in JPMorgan Chase’s Annual Report on Form 10-K for the year ended December 31, 2010, as filed with the U.S. Securities and Exchange Commission (the “2010 Annual Report”).

Certain amounts reported in prior periods have been reclassified to conform to the current presentation.

NOTE 2 – BUSINESS CHANGES AND DEVELOPMENTS

Increase in common stock dividend

On March 18, 2011, the Board of Directors raised the Firm’s quarterly common stock dividend from \$0.05 to \$0.25 per share, effective with the dividend paid on April 30, 2011, to shareholders of record on April 6, 2011.

Stock repurchases

On March 18, 2011, the Board of Directors approved a \$15.0 billion common equity repurchase program, of which \$8.0 billion is authorized for repurchase in 2011. The \$15.0 billion repurchase program supersedes a \$10.0 billion repurchase program approved in 2007. The \$15.0 billion authorization includes shares to be repurchased to offset issuances under the Firm’s employee stock-based incentive plans.

The authorization to repurchase common equity will be utilized at management’s discretion, and the timing of purchases and the exact amount of common equity that may be repurchased is subject to various factors, including market conditions; legal considerations affecting the amount and timing of repurchase activity; the Firm’s capital position (taking into account goodwill and intangibles); internal capital generation; and alternative investment opportunities. The repurchase program does not include specific price targets or timetables; may be executed through open market purchases or privately negotiated transactions, or utilizing Rule 10b5-1 programs; and may be suspended at any time.

For additional information on repurchases see Item 2, Unregistered Sales of Equity Securities and Use of Proceeds, on pages 193–194 of this Form 10-Q.

NOTE 3 – FAIR VALUE MEASUREMENT

For a further discussion of the Firm’s valuation methodologies for assets, liabilities and lending-related commitments measured at fair value and the fair value hierarchy, see Note 3 on pages 170–187 of JPMorgan Chase’s 2010 Annual Report.

During the first six months of 2011, no changes were made to the Firm’s valuation models that had, or were expected to have, a material impact on the Firm’s Consolidated Balance Sheets or results of operations.

The following table presents the assets and liabilities measured at fair value as of June 30, 2011, and December 31, 2010, by major product category and fair value hierarchy.

(a) At June 30, 2011, and December 31, 2010, included total U.S. government-sponsored enterprise obligations of \$124.0 billion and \$137.3 billion respectively, which were predominantly mortgage-related.

At June 30, 2011, and December 31, 2010, included within trading loans were \$20.1 billion and \$22.7 billion, respectively, of residential first-lien mortgages, and \$2.4 billion and \$2.6 billion, respectively, of commercial (b) first-lien mortgages. Residential mortgage loans include conforming mortgage loans originated with the intent to sell to U.S. government agencies of \$11.9 billion and \$13.1 billion, respectively, and reverse mortgages of \$3.9 billion and \$4.0 billion, respectively.

(c) Physical commodities inventories are generally accounted for at the lower of cost or fair value.

Balances reflect the reduction of securities owned (long positions) by the amount of securities sold but not yet (d) purchased (short positions) when the long and short positions have identical Committee on Uniform Security Identification Procedures numbers ("CUSIPs").

As permitted under U.S. GAAP, the Firm has elected to net derivative receivables and derivative payables and the related cash collateral received and paid when a legally enforceable master netting agreement exists. For purposes of the tables above, the Firm does not reduce derivative receivables and derivative payables balances for this netting adjustment, either within or across the levels of the fair value hierarchy, as such netting is not relevant to a (e) presentation based on the transparency of inputs to the valuation of an asset or liability. Therefore, the balances reported in the fair value hierarchy table are gross of any counterparty netting adjustments. However, if the Firm were to net such balances within level 3, the reduction in the level 3 derivative receivable and payable balances would be \$13.5 billion and \$12.7 billion at June 30, 2011, and December 31, 2010, respectively; this is exclusive of the netting benefit associated with cash collateral, which would further reduce the level 3 balances.

Private equity instruments represent investments within the Corporate/Private Equity line of business. The cost (f) basis of the private equity investment portfolio totaled \$9.6 billion and \$10.0 billion at June 30, 2011, and December 31, 2010, respectively.

At June 30, 2011, and December 31, 2010, balances included investments valued at net asset values of \$12.2 (g) billion and \$12.1 billion, respectively, of which \$6.0 billion and \$5.9 billion, respectively, were classified in level 1, \$1.7 billion and \$2.0 billion, respectively, in level 2, and \$4.5 billion and \$4.2 billion, respectively, in level 3.

(h) For the six months ended June 30, 2011 and 2010, the transfers between levels 1, 2 and 3, were not significant.

Changes in level 3 recurring fair value measurements

The following tables include a rollforward of the balance sheet amounts (including changes in fair value) for financial instruments classified by the Firm within level 3 of the fair value hierarchy for the three and six months ended June 30, 2011 and 2010. When a determination is made to classify a financial instrument within level 3, the determination is based on the significance of the unobservable parameters to the overall fair value measurement. However, level 3 financial instruments typically include, in addition to the unobservable or level 3 components, observable components (that is, components that are actively quoted and can be validated to external sources); accordingly, the gains and losses in the table below include changes in fair value due in part to observable factors that are part of the valuation methodology. Also, the Firm risk-manages the observable components of level 3 financial instruments using securities and derivative positions that are classified within level 1 or 2 of the fair value hierarchy; as these level 1 and level 2 risk management instruments are not included below, the gains or losses in the following tables do not reflect the effect of the Firm's risk management activities related to such level 3 instruments.

(a) Level 3 liabilities as a percentage of total Firm liabilities accounted for at fair value (including liabilities measured at fair value on a nonrecurring basis) were 23% and 23% at June 30, 2011, and December 31, 2010, respectively.

Predominantly reported in principal transactions revenue, except for changes in fair value for Retail Financial

(b) Services ("RFS") mortgage loans originated with the intent to sell, which are reported in mortgage fees and related income.

Realized gains/(losses) on available-for-sale ("AFS") securities, as well as other-than-temporary impairment losses that are recorded in earnings, are reported in securities gains. Unrealized gains / (losses) are reported in other comprehensive income ("OCI"). Realized gains / (losses) and foreign exchange remeasurement adjustments recorded in income on AFS securities were \$103 million and \$13 million for the three months ended June 30, 2011

and 2010, and were \$434 million and \$(65) million for the six months ended June 30, 2011 and 2010, respectively. Unrealized gains / (losses) reported on AFS securities in OCI were \$(8) million and \$(42) million for the three months ended June 30, 2011 and 2010, and were \$148 million and \$(107) million for the six months ended June 30, 2011 and 2010, respectively.

(d) Changes in fair value for RFS mortgage servicing rights are reported in mortgage fees and related income.

(e) Largely reported in other income.

(f) Loan originations are included in purchases.

(g) All transfers into and/or out of level 3 are assumed to occur at the beginning of the reporting period.

Assets and liabilities measured at fair value on a nonrecurring basis

Certain assets, liabilities and unfunded lending-related commitments are measured at fair value on a nonrecurring basis; that is, they are not measured at fair value on an ongoing basis but are subject to fair value adjustments only in certain circumstances (for example, when there is evidence of impairment). The following tables present the assets and liabilities carried on the Consolidated Balance Sheets by caption and level within the valuation hierarchy as of June 30, 2011, and December 31, 2010, for which a nonrecurring change in fair value has been recorded during the reporting period.

June 30, 2011 (in millions)	Fair value hierarchy			Total fair value

(a) Reflects mortgage, home equity and other loans where the carrying value is based on the fair value of the underlying collateral.

Represents, at June 30, 2011, and December 31, 2010, fair value adjustments associated with \$529 million and (b) \$517 million, respectively, of unfunded held-for-sale lending-related commitments within the leveraged lending portfolio.

(c) Predominantly includes credit card loans at December 31, 2010. Loans held-for-sale are carried on the Consolidated Balance Sheets at the lower of cost or fair value.

(d) For the six months ended June 30, 2011 and 2010, the transfers between levels 1, 2 and 3 were not significant.

(e) The prior period has been revised to conform with the current presentation.

The method used to estimate the fair value of impaired collateral-dependent loans, and other loans where the carrying value is based on the fair value of the underlying collateral (e.g., residential mortgage loans charged off in accordance

with regulatory guidance), depends on the type of collateral (e.g., securities, real estate, nonfinancial assets) underlying the loan. Fair value of the collateral is typically estimated based on quoted market prices, broker quotes or independent appraisals. For further information, see Note 14 on pages 149–150 of this Form 10-Q.

Nonrecurring fair value changes

The following table presents the total change in value of assets and liabilities for which a fair value adjustment has been included in the Consolidated Statements of Income for the three- and six-month periods ended June 30, 2011 and 2010, related to financial instruments held at those dates.

(in millions)	Three months ended		Six months ended June	
	June 30,		30,	
	2011	2010	2011	2010
Loans retained	\$ (709)	\$ (1,109)	\$ (1,272)	\$ (2,142)
Loans held-for-sale	13	(3)	38	65
Total loans	(696)	(1,112)	(1,234)	(2,077)
Other assets	(48)	11	(47)	29
Accounts payable and other liabilities	(4)	—	1	5
Total nonrecurring fair value gains/(losses)	\$ (748)	\$ (1,101)	\$ (1,280)	\$ (2,043)

(a) Prior periods have been revised to conform with the current presentation.

Level 3 analysis

Level 3 assets at June 30, 2011, predominantly include derivative receivables, mortgage servicing rights (“MSRs”), collateralized loan obligations (“CLOs”) held within the AFS securities portfolio, loans and asset-backed securities in the trading portfolio and private equity investments.

Derivative receivables included \$34.2 billion of interest rate, credit, foreign exchange, equity and commodity contracts classified within level 3 at June 30, 2011. Credit derivative receivables of \$15.1 billion include \$9.9 billion of structured credit derivatives with corporate debt underlying and \$3.3 billion of credit default swaps on commercial mortgages where the risks are partially mitigated by similar and offsetting derivative payables. Interest rate derivative receivables of \$5.9 billion include long-dated structured interest rate derivatives which are dependent on correlation. Equity derivative receivables of \$5.2 billion principally include long-dated contracts where the volatility levels are unobservable. Foreign exchange derivative receivables of \$4.6 billion include long-dated foreign exchange derivatives which are dependent on the correlation between foreign exchange and interest rates.

Mortgage servicing rights represent the fair value of future cash flows for performing specified mortgage servicing activities for others (predominantly with respect to residential mortgage loans). For a further description of the MSR asset, the interest rate risk management and valuation methodology used for MSRs, including valuation assumptions and sensitivities, see Note 17 on pages 260–263 of JPMorgan Chase’s 2010 Annual Report and Note 16 on pages 159–163 of this Form 10-Q.

CLOs totaling \$15.1 billion are securities backed by corporate loans held in the AFS securities portfolio. Substantially all of these securities are rated “AAA,” “AA” and “A” and had an average credit enhancement of 30%. Credit enhancement in CLOs is primarily in the form of subordination, which is a form of structural credit enhancement where realized losses associated with assets held by the issuing vehicle are allocated to the various tranches of securities issued by the vehicle considering their relative seniority. For further discussion, see Note 11 on pages 128–132 of this Form 10-Q.

- Trading loans totaling \$11.7 billion included \$5.7 billion of residential mortgage whole loans and commercial mortgage loans for which there is limited price transparency; and \$3.9 billion of reverse mortgages for which the principal risk sensitivities are mortality risk and home prices. The fair value of the commercial and residential mortgage loans is estimated by projecting expected cash flows, considering relevant borrower-specific and market factors, and discounting those cash flows at a rate reflecting current market liquidity. Loans are partially hedged by level 2 instruments, including credit default swaps and interest rate derivatives, for which valuation inputs are observable and liquid.

Consolidated Balance Sheets changes

Level 3 assets (including assets measured at fair value on a nonrecurring basis) were 5% of total Firm assets at June 30, 2011. The following describes significant changes to level 3 assets since December 31, 2010.

For the three months ended June 30, 2011

Level 3 assets were \$109.8 billion at June 30, 2011, reflecting a decrease of \$6.3 billion from the first quarter largely related to a:

\$4.4 billion decrease in nonrecurring loans held-for-sale driven by sales in the loan portfolios;

For the six months ended June 30, 2011

Level 3 assets decreased by \$4.9 billion in the first six months of 2011, due to the following:

Edgar Filing: J P MORGAN CHASE & CO - Form 10-Q

\$3.0 billion net decrease in nonrecurring loans held-for-sale driven by sales in the loan portfolios;

\$1.4 billion decrease in trading loans primarily due to asset sales

\$1.4 billion decrease in MSRs. For further discussion of the change, refer to Note 16 on pages 159–163 of this Form 10-Q.

\$1.6 billion increase in asset-backed AFS securities, predominantly driven by purchases of new issuance CLOs;

Gains and Losses

Included in the tables for the three months ended June 30, 2011

\$960 million of losses on MSRs. For further discussion of the change, refer to Note 16 on pages 159–163 of this Form 10-Q.

Included in the tables for the three months ended June 30, 2010

\$2.0 billion of net gains on derivatives, largely driven by the widening of credit spreads

\$632 million in gains related to long-term structured note liabilities, largely driven by the volatility in the equity markets

\$3.6 billion of losses on MSRs predominantly due to declines in interest rates

Included in the tables for the six months ended June 30, 2011

\$1.7 billion gain in private equity, predominately driven by net increases in investment valuations and sales in the portfolio.

\$1.2 billion of net gains on derivatives, largely driven by increase in interest rate derivatives;

\$1.7 billion of losses on MSRs. For further discussion of the change, refer to Note 16 on pages 159–163 of this Form 10-Q

Included in the tables for the six months ended June 30, 2010

\$3.7 billion of losses on MSRs predominantly due to declines in interest rates

\$1.2 billion of gains in net derivatives receivables

\$1.0 billion of gains related to long-term structured note liabilities, primarily due to volatility in the equities markets.

Credit adjustments

When determining the fair value of an instrument, it may be necessary to record a valuation adjustment to arrive at an exit price under U.S. GAAP. Valuation adjustments include, but are not limited to, amounts to reflect counterparty credit quality and the Firm's own creditworthiness. The market's view of the Firm's credit quality is reflected in credit spreads observed in the credit default swap market. For a detailed discussion of the valuation adjustments the Firm considers, see Note 3 on pages 170–187 of JPMorgan Chase's 2010 Annual Report.

The following table provides the credit adjustments, excluding the effect of any hedging activity, reflected within the Consolidated Balance Sheets as of the dates indicated.

(in millions)	June 30, 2011	December 31, 2010
Derivative receivables balance (net of derivatives CVA)	\$77,383	\$80,481
Derivatives CVA ^(a)	(4,075)	(4,362)
Derivative payables balance (net of derivatives DVA)	63,668	69,219
Derivatives DVA	(836)	(882)
Structured notes balance (net of structured notes DVA) ^{(b)(c)}	55,005	53,139
Structured notes DVA	(1,318)	(1,153)

(a) Derivatives credit valuation adjustments ("CVA"), gross of hedges, includes results managed by the Credit Portfolio and other lines of business within the Investment Bank ("IB").

(b) Structured notes are recorded within long-term debt, other borrowed funds or deposits on the Consolidated Balance Sheets, based on the tenor and legal form of the note.

(c) Structured notes are measured at fair value based on the Firm's election under the fair value option. For further information on these elections, see Note 4 on pages 114–116 of this Form 10-Q.

The following table provides the impact of credit adjustments on earnings in the respective periods, excluding the effect of any hedging activity.

(in millions)	Three months ended June 30,		Six months ended June 30,	
	2011	2010	2011	2010
Credit adjustments:				
Derivative CVA ^(a)	\$(248)	\$(1,070)	\$287	\$(914)
Derivative DVA	23	397	(46)	291
Structured note DVA ^(b)	142	588	165	696

- (a) Derivatives CVA, gross of hedges, includes results managed by the Credit Portfolio and other lines of business within IB.
- (b) Structured notes are measured at fair value based on the Firm's election under the fair value option. For further information on these elections, see Note 4 on pages 114–116 of this Form 10-Q.

Additional disclosures about the fair value of financial instruments (including financial instruments not carried at fair value)

The following table presents the carrying values and estimated fair values of financial assets and liabilities. For additional information regarding the financial instruments within the scope of this disclosure, and the methods and significant assumptions used to estimate their fair value, see Note 3 on pages 170–187 of JPMorgan Chase’s 2010 Annual Report.

The following table presents the carrying values and estimated fair values of financial assets and liabilities.

(in billions)	June 30, 2011			December 31, 2010		
	Carrying value	Estimated fair value	Appreciation/ (depreciation)	Carrying value	Estimated fair value	Appreciation/ (depreciation)
Financial assets						
Assets for which fair value approximates carrying value	\$200.3	\$200.3	\$ —	\$49.2	\$49.2	\$ —
Accrued interest and accounts receivable	80.3	80.3	—	70.1	70.1	—

debentures (included \$38.5 and \$38.8
at fair value)^(b)

Total financial liabilities	\$2,031.0	\$2,033.6	\$ (2.6)	\$1,909.4	\$1,912.0	\$ (2.6)
Net (depreciation)/appreciation			\$ (2.2)			\$ 0.3

Fair value is typically estimated using a discounted cash flow model that incorporates the characteristics of the underlying loans (including principal, contractual interest rate and contractual fees) and other key inputs, including expected lifetime credit losses, interest rates, prepayment rates, and primary origination or secondary market spreads. For certain loans, the fair value is measured based upon the value of the underlying collateral. The difference between the estimated fair value and carrying value of a financial asset or liability is the result of the (a) different methodologies used to determine fair value as compared with carrying value. For example, credit losses are estimated for a financial asset's remaining life in a fair value calculation but are estimated for a loss emergence period in a loan loss reserve calculation; future loan income (interest and fees) is incorporated in a fair value calculation but is generally not considered in a loan loss reserve calculation. For a further discussion of the Firm's methodologies for estimating the fair value of loans and lending-related commitments, see Note 3 pages 171–173 of JPMorgan Chase's 2010 Annual Report.

Effective January 1, 2011, \$23.0 billion of long-term advances from Federal Home Loan Banks ("FHLBs") were (b) reclassified from other borrowed funds to long-term debt. The prior-year period has been revised to conform with the current presentation.

The majority of the Firm's lending-related commitments are not carried at fair value on a recurring basis on the Consolidated Balance Sheets, nor are they actively traded. The carrying value and estimated fair value of the Firm's wholesale lending-related commitments were as follows for the periods indicated.

(in billions)	June 30, 2011		December 31, 2010	
	Carrying value ^(a)	Estimated fair value	Carrying value ^(a)	Estimated fair value
Wholesale lending-related commitments	\$0.6	\$1.5	\$0.7	\$0.9

^(a) Represents the allowance for wholesale lending-related commitments. Excludes the current carrying values of the guarantee liability and the offsetting asset, each of which are recognized at fair value at the inception of guarantees. The Firm does not estimate the fair value of consumer lending-related commitments. In many cases, the Firm can reduce or cancel these commitments by providing the borrower notice or, in some cases, without notice as permitted by law. For a further discussion of the valuation of lending-related commitments, see Note 3 on pages 171–173 of JPMorgan Chase's 2010 Annual Report.

Trading assets and liabilities - average balances

Average trading assets and liabilities were as follows for the periods indicated.

(in millions)	Three months ended June 30,		Six months ended June 30,	
	2011	2010	2011	2010
Trading assets – debt and equity instruments ^(a)	\$422,715	\$340,612	\$420,103	\$336,212
Trading assets – derivative receivables	82,860	79,409	84,141	79,048
Trading liabilities – debt and equity instruments ^{(a)(b)}	84,250	77,492	83,588	74,205
Trading liabilities – derivative payables	66,009	62,547	68,634	60,809

^(a) Balances reflect the reduction of securities owned (long positions) by the amount of securities sold, but not yet purchased (short positions) when the long and short positions have identical CUSIP numbers.

^(b) Primarily represent securities sold, not yet purchased.

NOTE 4 – FAIR VALUE OPTION

For a discussion of the primary financial instruments for which the fair value option was previously elected, including the basis for those elections and the determination of instrument-specific credit risk, where relevant, see Note 4 on pages 187–189 of JPMorgan Chase's 2010 Annual Report.

Changes in fair value under the fair value option election

The following table presents the changes in fair value included in the Consolidated Statements of Income for the three and six months ended June 30, 2011 and 2010, for items for which the fair value option was elected. The profit and loss information presented below only includes the financial instruments that were elected to be measured at fair value; related risk management instruments, which are required to be measured at fair value, are not included in the table.

	Three months ended June 30, 2011			2010

Long-term debt:							
Changes in instrument-specific credit risk ^(a)	199	—	199	585	—	585	
Other changes in fair value ^(b)	(117)—	(117) 1,558	—	1,558	

Total changes in instrument-specific credit risk related to structured notes were \$142 million and \$588 million for the three months ended June 30, 2011 and 2010, respectively, and \$165 million and \$696 million for the six months ended June 30, 2011 and 2010, respectively. Those totals include adjustments for structured notes classified within deposits and other borrowed funds, as well as long-term debt.

Structured notes are debt instruments with embedded derivatives that are tailored to meet a client's need. The embedded derivative is the primary driver of risk. Although the risk associated with the structured notes is actively managed, the gains reported in this table do not include the income statement impact of such risk management instruments.

(b) Reported in mortgage fees and related income.

(d) Reported in other income.

Difference between aggregate fair value and aggregate remaining contractual principal balance outstanding

The following table reflects the difference between the aggregate fair value and the aggregate remaining contractual principal balance outstanding as of June 30, 2011, and December 31, 2010, for loans, long-term debt and long-term beneficial interests for which the fair value option has been elected.

(in millions)	June 30, 2011		December 31, 2010			
	Contractual principal outstanding	Fair value	Fair value over/(under) contractual principal outstanding	Contractual principal outstanding	Fair value	Fair value over/(under) contractual principal outstanding
Loans						
Performing loans 90 days or more past due						
Loans reported as trading assets	\$—	\$—	\$ —	\$—	\$—	\$ —
Loans	—	—	—	—	—	—
Nonaccrual loans						
Loans reported as trading assets	5,342	1,410	(3,932)	5,246	1,239	(4,007)
Loans	889	72	(817)	927	132	(795)
Subtotal	6,231	1,482	(4,749)	6,173	1,371	(4,802)
All other performing loans						
Loans reported as trading assets	40,255	34,945	(5,310)	39,490	33,641	(5,849)
Loans	2,239	1,488	(751)	2,496	1,434	(1,062)
Total loans	\$48,725	\$37,915	\$ (10,810)	\$48,159	\$36,446	\$ (11,713)
Long-term debt						
Principal-protected debt	\$20,620 (b)	\$21,157	\$ 537	\$20,761 (b)	\$21,315	\$ 554
Nonprincipal-protected debt ^(a)	NA	17,359	NA	NA	17,524	NA
Total long-term debt	NA	\$38,516	NA	NA	\$38,839	NA
Long-term beneficial interests						
Principal-protected debt	\$—	\$—	\$ —	\$49	\$49	\$ —
Nonprincipal-protected debt ^(a)	NA	911	NA	NA	1,446	NA
Total long-term beneficial interests	NA	\$911	NA	NA	\$1,495	NA

Remaining contractual principal is not applicable to nonprincipal-protected notes. Unlike principal-protected notes, for which the Firm is obligated to return a stated amount of principal at the maturity of the note,

(a) nonprincipal-protected notes do not obligate the Firm to return a stated amount of principal at maturity, but to return an amount based on the performance of an underlying variable or derivative feature embedded in the note.

(b) Where the Firm issues principal-protected zero-coupon or discount notes, the balance reflected as the remaining contractual principal is the final principal payment at maturity.

At both June 30, 2011, and December 31, 2010, the contractual amount of letters of credit for which the fair value option was elected was \$3.8 billion, with a corresponding fair value of \$(6) million. For further information regarding off-balance sheet lending-related financial instruments, see Note 30 on pages 275–280 of JPMorgan Chase's 2010 Annual Report.

NOTE 5 – DERIVATIVE INSTRUMENTS

For a further discussion of the Firm's use and accounting policies regarding derivative instruments, see Note 6 on pages 191–199 of JPMorgan Chase's 2010 Annual Report.

Notional amount of derivative contracts

The following table summarizes the notional amount of derivative contracts outstanding as of June 30, 2011, and December 31, 2010.

(in billions)	Notional amounts ^(b)	
	June 30, 2011	December 31, 2010
Interest rate contracts		
Swaps	\$44,191	\$46,299
Futures and forwards	8,871	9,298
Written options	4,361	4,075
Purchased options	4,623	3,968
Total interest rate contracts	62,046	63,640
Credit derivatives ^(a)	6,105	5,472
Foreign exchange contracts		
Cross-currency swaps	2,875	2,568
Spot, futures and forwards	4,624	3,893
Written options	718	674
Purchased options	711	649
Total foreign exchange contracts	8,928	7,784
Equity contracts		
Swaps	130	116
Futures and forwards	51	49
Written options	519	430
Purchased options	473	377
Total equity contracts	1,173	972
Commodity contracts		
Swaps	401	349
Spot, futures and forwards	189	170
Written options	307	264
Purchased options	297	254
Total commodity contracts	1,194	1,037
Total derivative notional amounts	\$79,446	\$78,905

^(a) Primarily consists of credit default swaps. For more information on volumes and types of credit derivative contracts, see the Credit derivatives discussion on pages 123–124 of this Note.

^(b) Represents the sum of gross long and gross short third-party notional derivative contracts.

While the notional amounts disclosed above give an indication of the volume of the Firm's derivatives activity, the notional amounts significantly exceed, in the Firm's view, the possible losses that could arise from such transactions. For most derivative transactions, the notional amount is not exchanged; it is used simply as a reference to calculate payments.

Impact of derivatives on the Consolidated Balance Sheets

The following tables summarize information on derivative fair values that are reflected on the Firm's Consolidated Balance Sheets as of June 30, 2011, and December 31, 2010, by accounting designation (e.g., whether the derivatives were designated as hedges or not) and contract type.

Free-standing derivatives^(a)

Netting adjustment ^(c)			(1,448,931)			(1,415,890)
Carrying value of derivative trading assets and trading liabilities on the Consolidated Balance Sheets			\$80,481			\$69,219

(a) Excludes structured notes for which the fair value option has been elected. See Note 4 on pages 114–116 of this Form 10-Q and Note 4 on pages 187–189 of JPMorgan Chase's 2010 Annual Report for further information.

(b) Excludes \$15 million and \$21 million of foreign currency-denominated debt designated as a net investment hedge at June 30, 2011, and December 31, 2010, respectively.

(c) U.S. GAAP permits the netting of derivative receivables and payables, and the related cash collateral received and paid when a legally enforceable master netting agreement exists between the Firm and a derivative counterparty.

(d) Excludes \$1.0 billion related to commodity derivatives that are embedded in a debt instrument and used as fair value hedging instruments that are recorded in the line item of the host contract (other borrowed funds) for December 31, 2010.

Derivative receivables and payables fair value

Edgar Filing: J P MORGAN CHASE & CO - Form 10-Q

The following table summarizes the fair values of derivative receivables and payables, including those designated as hedges, by contract type and after netting adjustments as of June 30, 2011, and December 31, 2010.

(in millions)	Trading assets – Derivative receivables		Trading liabilities – Derivative payables	
	June 30, 2011	December 31, 2010	June 30, 2011	December 31, 2010

Total	\$77,383	\$80,481	\$63,668	\$69,219

Impact of derivatives on the Consolidated Statements of Income

Fair value hedge gains and losses

The following tables present derivative instruments, by contract type, used in fair value hedge accounting relationships, as well as pretax gains/(losses) recorded on such derivatives and the related hedged items for the three and six months ended June 30, 2011 and 2010, respectively. The Firm includes gains/(losses) on the hedging derivative and the related hedged item in the same line item in the Consolidated Statements of Income.

	Gains/(losses) recorded in income			Income statement impact due to:
