**CGG Announces Record Quarterly Multi-Client Sales and
Solid Vessel Production Rate for Fourth Quarter 2014**

PARIS, France January 06, 2015

CGG provides its vessel utilization and fleet allocation updates for the fourth quarter of 2014.

Solid Vessel production rate for the fourth quarter of 2014:

The vessel availability⁽¹⁾ rate was 87% due to typically high transit at this time of the year. This compares to an 83% availability rate in the fourth quarter of 2013 and a 92% rate in the third quarter of 2014.

The vessel production⁽²⁾ rate was 92%. This compares to a 90% production rate in the fourth quarter of 2013 and a 92% rate in the third quarter of 2014.

During the fourth quarter of 2014, our 3D vessels were allocated 64% to contract and 36% to multi-client programs.

Record quarterly multi-client sales for the fourth quarter 2014:

CGG anticipate multi-client sales around \$290 million during the fourth quarter of 2014, the highest ever quarterly revenue.

Significant client commitment for our StagSeis™ Gulf of Mexico program but also sustained multi-client sales in the North Sea, West Africa and Latin America drove multi-client revenue to this mark.

Jean-Georges Malcor, CEO, CGG, said: *Our outstanding level of multi-client sales this quarter is clearly positive news given the unfavorable context of current oil prices. It also confirms client recognition of our excellent technology and the unique strategic positioning of our multi-client library in key sedimentary geological basins.*

- ¹ The *vessel availability rate*, a metric measuring the structural availability of our vessels to meet demand; this metric is related to the entire fleet, and corresponds to the total vessel time reduced by the sum of the standby time, of the shipyard time and the steaming time (the available time), all divided by total vessel time;
- ² The *vessel production rate*, a metric measuring the effective utilization of the vessels once available; this metric is related to the entire fleet, and corresponds to the available time reduced by the operational downtime, all then divided by available time.
