FLAHERTY & CRUMRINE TOTAL RETURN FUND INC Form N-30B-2 April 28, 2015 FLAHERTY & CRUMRINE TOTAL RETURN FUND

To the Shareholders of Flaherty & Crumrine Total Return Fund (FLC):

Your Fund is off to a fine start in fiscal 2015 during the first fiscal quarter total return on net asset value² was +2.3%, while total return on market price came in at +1.5%. The value of the investment portfolio increased modestly during the quarter, so much of the NAV return was comprised of interest and dividends earned on portfolio holdings.

Economic conditions in the U.S. remain the envy of most developed economies (faint praise indeed!). We expect gross domestic product (adjusted for inflation) to grow between 2.5% and 3.0% in 2015, up a bit from last year s 2.4%. Inflationary expectations are low, reflecting falling energy and commodity prices, along with recent appreciation in the U.S. dollar. The outlook for interest rates in the U.S. has not changed we expect the Federal Reserve to boost short-term interest rates by 0.25% sometime between June and September; subsequent increases, however, should be gradual. Intermediate and long-term interest rates, while likely to edge up over time, should remain substantially lower than what we would normally associate with 2.5-3.0% real GDP growth.

In contrast, many Euro-zone economies are struggling, and growth has slowed in Japan, as well as in China and many other developing countries. Around the globe, elevated geopolitical tensions are hampering economic activity. As evidence, interest rates are actually negative in a number of safe economies. In increasing numbers, foreign investors seeking better returns are making investments in U.S. markets. These moves help explain strength in the U.S. dollar and domestic fixed-income and equity markets.

By most measures, conditions in the preferred securities market remain healthy. Fundamental credit conditions are stable or improving, with loan delinquencies and defaults trending down across almost all loan categories. Income-oriented investors have increasingly turned to the preferred-securities space seeking alternatives to lower-yielding securities. New issue volumes, though less robust than last year, are well above historical norms. We expect preferred securities issuance to remain elevated throughout 2015, as issuers work toward future regulatory capital requirements and take advantage of low interest rates to reduce overall capital expense. We continue to be constructive on the preferred market, as demand shows little sign of abating.

The Fund s investment portfolio did not change materially over the quarter. During 2014, we had reduced the portfolio s exposure to foreign issuers as we saw better opportunities in the U.S. We also had increased holdings in fixed-to-floating preferred securities (coupons are *fixed* for an initial period, typically five or ten years, and then *float* with interest rates). We believe this increase provides some principal protection should intermediate- and long-term interest rates rise, while offering some price upside should credit spreads narrow. Putting it all together, the portfolio s current construction is in-line with our views on the market.

¹ December 1, 2014 February 28, 2015

² Following the methodology required by the SEC, total return assumes dividend reinvestment and includes income and principal change, plus the impact of the Fund's leverage and expenses.

Sincerely,		

The Flaherty & Crumrine Portfolio Management Team:

1. Aggregate Information for Federal Income Tax Purposes

At February 28, 2015, the aggregate cost of securities for federal income tax purposes was \$305,289,288, the aggregate gross unrealized appreciation for all securities in which there was an excess of value over tax cost was \$26,075,824 and the aggregate gross unrealized depreciation for all securities in which there was an excess of tax cost over value was \$21,872,060.

2. Additional Accounting Standards

Fair Value Measurements: The Fund has analyzed all existing investments to determine the significance and character of all inputs to their fair value determination. The levels of fair value inputs used to measure the Fund s investments are characterized into a fair value hierarchy. Where inputs for an asset or liability fall into more than one level in the fair value hierarchy, the investment is classified in its entirety based on the lowest level input that is significant to that investment s valuation. The three levels of the fair value hierarchy are described below:

- Level 1 quoted prices in active markets for identical securities
- Level 2 other significant observable inputs (including quoted prices for similar securities, interest rates, prepayment speeds, credit risk, etc.)
- Level 3 significant unobservable inputs (including the Fund s own assumptions in determining the fair value of investments)

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities. Transfers in and out of levels are recognized at market value at the end of the period.

During the reporting period, there were no transfers into Level 1 from Level 2 or into Level 2 from Level 1.

The fair values of the Funds investments are generally based on market information and quotes received from brokers or independent pricing services that are approved by the Board of Directors and are unaffiliated with the Adviser. To assess the continuing appropriateness of security valuations, management, in consultation with the Adviser, regularly compares current prices to prior prices, prices across comparable securities, actual sale prices for securities in the Funds portfolio, and market information obtained by the Adviser as a function of being an active market participant.

Securities with quotes that are based on actual trades or actionable bids and offers with a sufficient level of activity on or near the measurement date are classified as Level 1. Securities that are priced using quotes derived from implied values, indicative bids and offers, or a limited number of actual trades or the same information for securities that are similar in many respects to those being valued are classified as Level 2. If market information is not available for securities being valued, or materially-comparable securities, then those securities are classified as Level 3. In considering market information, management evaluates changes in liquidity, willingness of a broker to execute at the quoted price, the depth and consistency of prices from pricing services, and the existence of observable trades in the market.

NOTES TO FINANCIAL STATEMENTS (Unaudited) (Continued)

The following is a reconciliation of Level 3 investments for which significant unobservable inputs were used to determine fair value:

			Preferred Securities		porate Debt Securities
	Total Investments		Banking	Fina	ncial Services
Balance as of 11/30/14	\$	320,537	\$ 15,000	\$	305,537
Accrued discounts/premiums					
Realized gain/(loss)					
Change in unrealized appreciation/(depreciation)		(7,137)			(7,137)
Purchases					
Sales					
Transfers in					
Transfers out					
Balance as of 02/28/15	\$	313,400	\$ 15,000	\$	298,400

For the three months ended February 28, 2015, total change in unrealized gain/(loss) on Level 3 securities still held at period-end and included in the change in net assets was \$(7,137).

The following table summarizes the valuation techniques used and unobservable inputs developed to determine the fair value of Level 3 investments:

Category	Fair Value at 02/28/15	Valuation Technique	Unobservable Input	Input Range (Wgt Avg)
Preferred Securities				
Banking	\$ 15,000	Bankruptcy recovery	Credit/Structure-specific recovery	0.00%-0.50% (0.15%)
Corporate Debt				
Securities	298,400	Bankruptcy recovery	Credit/Structure-specific recovery	4%-9% (6%)

The significant unobservable inputs used in the fair value measurement technique for bankruptcy recovery are based on recovery analysis that is specific to the security being valued, including the level of subordination and structural features of the security, and the current status of any bankruptcy or liquidation proceedings. Observable market trades in bankruptcy claims are utilized by management, when available, to assess the appropriateness of valuations, although the frequency of trading depends on the specific credit and seniority of the claim. Expected recoveries in bankruptcy by security type and industry do not tend to deviate much from historical recovery rates, which are very low (sometimes zero) for preferred securities and more moderate for senior debt. Significant changes in these inputs would result in a significantly higher or lower fair value measurement.
