Section 1 Conflict Minerals Disclosure

ITEM 1.01 Conflict Minerals Disclosure and Report

Introduction

This specialized disclosure report on Form SD for the reporting period from January 1 to December 31, 2014 (the Reporting Period) is presented to comply with Rule 13p-1 under the Securities Exchange Act of 1934 (the Rule). The Rule was adopted by the United States Securities and Exchange Commission (the SEC) to implement reporting and disclosure requirements related to conflict minerals as directed by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act). Conflict Minerals (CMs) are defined as columbite-tantalite (coltan), cassiterite, gold, wolframite, and their derivatives, which are limited to tantalum, tin and tungsten. The Rule applies to SEC registrants that manufacture or contract to manufacture products that contain CMs that are necessary to the products functionality or production. The following should be read in conjunction with the definitions contained in the SEC instructions to Form SD and related rules.

Company Overview

ORIX Kabushiki Kaisha (translated into English, ORIX Corporation) and its subsidiaries (collectively, ORIX Group) provide a broad range of primarily finance-related products and services to Japanese and international customers. ORIX Group operates in six business segments: Corporate Financial Services, Maintenance Leasing, Real Estate, Investment and Operation, Retail, and Overseas Business. The Corporate Financial Services segment offers leasing and loans to small and medium-sized enterprises. The Maintenance Leasing segment consists of automobile and equipment leasing and rentals and car sharing businesses. The Real Estate segment is engaged in property development and leasing, real estate finance and facilities management. The Investment and Operation segment comprises environment and energy-related business, loan servicing and principal investments. The Retail segment offers life insurance, banking, and card loan services. The Overseas business segment engages in financial services through overseas subsidiaries, business development and investment with business partners abroad, and aircraft and ship leasing businesses.

Based on an internal review and assessment of ORIX Group s businesses and operations (covering more than 800 entities), ORIX Corporation confirmed that no consolidated subsidiaries manufactured products that contain CMs that are necessary to the product s functionality or production and identified only one consolidated subsidiary, Ubiteq, Inc. (Ubiteq), that contracted to manufacture products for which CMs are necessary to their functionality or production during the Reporting Period. As of December 31, 2014, ORIX Corporation owned 58.55% of the total number of outstanding shares of Ubiteq. ORIX Corporation has the power to appoint three out of Ubiteq s six directors. Ubiteq accounts for approximately 0.14% of ORIX Group s total revenue.

Ubiteq Overview

Ubiteq is a Japanese public company listed on the JASDAQ Securities Exchange. Ubiteq provides a range of computer- and network-related products and solutions, including product planning, design and development, fabless production and sales, and maintenance. Ubiteq s business is primarily composed of two segments: Electronic Equipment and Mobile and Ubiquitous Technology. The Electronic Equipment segment develops and produces imaging solutions, electronic system solutions, hardware circuit and software, assesses prototypes and assists with original equipment manufacturer production. The Mobile and Ubiquitous Technology segment develops and produces mobile technology solutions and communications infrastructures.

Edgar Filing: ORIX CORP - Form SD

Ubiteq is a fabless production company that outsources production and raw material procurement to its suppliers. Based on an internal review and assessment of twelve products Ubiteq contracted to manufacture during the Reporting Period, Ubiteq identified four products that contained CMs: two types of magnetometers in financial terminals, one type of vehicle telematic device and one type of karaoke machine component (the Covered Products). The magnetometers in financial terminals contained gold, tantalum, tin and tungsten, the vehicle telematic device contained gold and tin and the karaoke machine component contained gold, tantalum and tin. In each case, the CMs are necessary to the functionality of the Covered Product. These products account for approximately 45% of Ubiteq's total revenue for the Reporting Period.

Description of Reasonable Country of Origin Inquiry Efforts

During the Reporting Period, Ubiteq outsourced the sourcing, manufacturing and assembly of the Covered Products to three immediate suppliers. Ubiteq sought representations from all three immediate suppliers indicating the facilities from which the CMs were procured or processed. Ubiteq instructed its immediate suppliers to provide this information using the Conflict Minerals Reporting Template developed through CFSI, an industry-wide initiative under the auspices of Electronics Industry Citizenship Coalition (EICC) and Global e-Sustainability Initiative (GeSI). Ubiteq engaged with its immediate suppliers to confirm the data provided in the Conflict Minerals Reporting Template and worked with the immediate suppliers to make follow-up requests to the second-tier suppliers. During this process, ORIX Corporation worked closely with Ubiteq to understand the scope and results of Ubiteq's country of origin inquiry.

Ubiteq obtained completed EICC-GeSI Conflict Minerals Reporting Templates from all three immediate suppliers. The three immediate suppliers represented that 100% of gold, tantalum, tin and tungsten measured by number of components in the magnetometers in financial terminals, 100% of gold and tin measured by number of components in the vehicle telematic device and 95% of gold, tantalum and tin measured by number of components in the karaoke machine component (in the aggregate, more than 97% of the CMs contained in all Covered Products) they sourced did not originate in the Democratic Republic of the Congo or an adjoining country (the Covered Countries). In addition, each immediate supplier represented to Ubiteq that it is not aware of any circumstances that indicate that any CMs originated or may have originated in the Covered Countries.

Reasonable Country of Origin Inquiry Conclusion

Based on ORIX Corporation's internal review and assessment of the inquiries Ubiteq made and the responses it received and discussions with Ubiteq, ORIX Corporation believes that the country of origin inquiry conducted by Ubiteq was reasonably designed and undertaken in good faith to determine whether any of the CMs contained in the Covered Products originated in the Covered Countries. Based on this good faith, reasonable country of origin inquiry and the absence of any red flags, ORIX Corporation concluded that it has no reason to believe that the CMs contained in the Covered Products may have originated in the Covered Countries.
