REPORT

FOR THE QUARTER AND SIX MONTHS ENDED 30 JUNE 2000

HIGHLIGHTS

Company results for the quarter

Overall improvement in performance is reflected in a

10% increase in operating profit in rand terms.

Gold production increases by 3% to 1.8 million oz. Total cash costs are reduced by 5% to US\$207/oz. Increased deferred tax and reduced interest, together,

reduce headline earnings by 0.4% to R458 million.

Regional operating results for the quarter

SOUTH AFRICA

A strong recovery at Great Noligwa and TauTona,

achieving many of the objectives set at last quarter end, and an increase in gold production of 19% and 16% respectively.

Corrective action in place at Bambanani, Elandsrand

and Joel but more work is needed.

Gold production rises by 25,000 oz. Volume and value productivity indices improve,

despite a 2% decline in grade.

Costs and tax reduce headline earnings marginally

by 1%.

AFRICA

Record production and a 12% improvement in total

cash costs at Sadiola.

Continued good performance at Navachab. First gold is poured at Geita, three months ahead of

schedule.

NORTH AMERICA

Lower grades and continued bad weather reduce

production at Jerritt Canyon by 4%, but production

losses for the first two quarters will be recovered by year end.

Gold production increases by 16% at CC&V. Leach pad extension at CC&V is due for completion

ten weeks early.

SOUTH AMERICA

Gold production is 1% up to 105,000oz. Total cash costs are 5% lower at US\$133/oz.

AUSTRALASIA

Sunrise Dam overcomes its first quarter problems

and increases production by 5% to 49,000oz.

Production is up at Pine Creek and Tanami, but

slightly lower at Boddington.

Growth and market development

AngloGold buys a 25% stake in OroAfrica, South

Africa's largest gold jewellery producer. It has a strategic partnership with Filk, the world's largest gold chain producer, and provides excellent growth opportunities in South Africa and worldwide.

Project AuTEK is launched to develop new industrial

uses for gold, and a gold catalysis symposium is planned for next year.

Company results for the half year

Operating profit virtually unchanged at R1,570 million. Headline earnings before deferred tax rate adjustment

down 7% due to lower interest and earnings from associates.

Attributable profit down 48% due to the inclusion of

abnormal items in the previous period.

A dividend of R7.50 per share is declared, giving a 6%

yield on a share price of R269 per share.

ANGLOGOLD LIMITED

Registration No. 05/17354/06 Incorporated in the Republic of South Africa

Certain forward-looking statements

Certain statements contained in this document, including without limitation, those concerning the economic outlook for the gold mining industry, expectations regarding gold prices and production, the completion and commencement of commercial operations of certain of AngloGold's exploration and production projects, and its liquidity and capital resources and expenditure, contain certain forward-looking statements regarding AngloGold's operations, economic performance and financial condition. Although AngloGold believes that the expectations reflected in such forward-looking statements are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of, among other factors, changes in economic and market conditions, success of business and operating initiatives, changes in the regulatory environment and other government actions, fluctuations in gold prices and exchange rates, and business and operational risk management.

E-mail: investors@anglogold.com

Dear Shareholder

The results reported for the second quarter reflect

good operating performance. Gold production improved by 3% to 1.8 million ounces; both cash and total costs reduced by 5%, and operating profit increased by 10%. In the context of the 5% decline in the dollar price received for gold sold this quarter, this is encouraging. Increased taxation, a result of improved operating profits in South Africa, and lower interest earned, a consequence of the significant investments in growth now being made by the company, have produced attributable profit and headline earnings down 1% on the previous quarter.

The Board has declared an interim dividend for the

half year of R7.50, representing a dividend yield of 6% on today's price of R269.

It is particularly pleasing to note the improved

performance of the South African mines, with the two major profit producers, Great Noligwa and TauTona, increasing their gold output by 19% and 16% respectively, and recording significant advances in all key efficiency measures. While the corrective actions indicated last quarter have been implemented at the Bambanani, Elandsrand and Joel mines, and some improvements are evident, further work is still necessary. At the end of the last quarter we published a separate report on the South African operations, setting out plans for correcting the performance of these five operations. Today we are releasing another report, providing an update on the progress to date at these mines*. For the South African Region as a whole, gold production improved by 2%, and both the volume and value measures of labour productivity rose by 11% and 4% respectively, notwithstanding an average grade that was 2% lower than the previous quarter.

It is equally encouraging that this quarter saw the

South African mines record their lowest ever rate of lost time injuries and their best performance in regard to fatal accidents. This is clear evidence of what can be achieved, and we hope this will spur management and employees to sustained and increased efforts in this area.

Operating profit for the half year to June at

R1,570 million is comparable to the first half of 1999, although headline earnings before the deferred tax adjustment at R916 million were down 7% from R983 million. This was as a consequence of lower net interest earnings and lower earnings from associates. Attributable profit is 48% down on the

first half of 1999 due to the effect of a deferred tax rate change, which was reduced by the write-off of goodwill included in the previous year.

During the first half of this year AngloGold laid

some important foundations for the company's future growth. The acquisition of significant stakes in the Morila and Geita mines in Mali and Tanzania respectively, as well as the commencement of the Yatela project in Mali will see the African Region becoming the company's second largest source of earnings after South Africa. The major pit expansion at Sunrise Dam in Australia secures significant production for a number of years to come.

The e-commerce venture, GoldAvenue, and

the acquisition of a 25% stake in South Africa's largest gold jewellery manufacturer, OroAfrica, both announced during the quarter, provide AngloGold with skilled and experienced partners and are a further demonstration of AngloGold's commitment to extracting value from its product beyond the current limits of mining.

We are equally enthusiastic about gold's potential

to contribute to a cleaner, healthier environment in the future. During the quarter, we launched Project AuTEK, an equal joint venture between AngloGold and Mintek, South Africa's national metallurgical research organization, to develop gold's application in catalysis and other environmentally sensitive industrial uses.

We remain convinced that, in today's gold market,

the future of the industry rests with the companies that have the energy and determination to innovate, to invest in and to lead their industry.

 ${}^{\star}\mathrm{This}$ report is available on the AngloGold website,

NICKY OPPENHEIMER

Chairman

BOBBY GODSELL

Chief Executive Officer

26 July 2000

LETTER FROM THE CHAIRMAN AND THE CHIEF EXECUTIVE OFFICER

SOUTH AFRICA

Overall performance

Productivity and efficiency indicators for the operations in the South African Region have shown most encouraging improvements. Measured in square metres per employee, productivity was up by 11% quarter-on-quarter, while efficiency, measured in grams per employee, increased by 4% despite average grade recovered being 2% lower quarter-on-quarter.

Significantly improved performance at Great

Noligwa and TauTona, together with continued strong performances from Kopanang, Tau Lekoa, Tshepong, Savuka and Ergo, resulted in gold production increasing by approximately 2% over the previous quarter to 42,640 kilograms (1.4 million oz).

Total cash costs at R47,574 per kilogram

(US\$216 per ounce) were contained to a 2% increase over the previous quarter, notwithstanding an 8% increase in area mined and a 3% increase in development activity.

We regret to report the death of ten employees

during the quarter. Importantly, however, we note the significant improvement in the safety performance of the South African Region over the previous quarter and the corresponding period last year. The number of lost time injuries for the quarter is the lowest on record, improving by 19 on the previous best record in the last quarter of 1999. It is very encouraging to note that in the quarter both Moab Khotsong and Great Noligwa recorded lost time injury frequency rates below the Ontario benchmark.

Mine performance

Production levels at **Great Noligwa** improved in the second quarter. Gold production was 19% higher with improvements in both area mined and grade. **Kopanang** had an excellent second quarter, improving gold production and labour efficiencies over the previous quarter. **Tau Lekoa** reports excellent results with gold production 8% above the previous quarter and all efficiency parameters exceeding the levels reported for the March quarter.

Gold output at Bambanani fell by 7% over the

previous period, mainly due to continued disappointing grades. At **Tshepong**, production and efficiency (measured in square metres and grams per employee) showed significant improvement over the previous quarter, increasing by 12% and 15%

respectively. The results at Matjhabeng reflect the scaling down of operations, prior to shaft closures.

Despite a significant increase in mining volume at **Joel,** a drop of 11% in the grade and problems in the gold recovery system led to an 8% decrease in gold production against the previous quarter.

Management focus on the most profitable mining

panels at **TauTona** helped improve the area mined, grade and gold production (which increased by 16%) over the previous quarter. All efficiency parameters showed improvements. Despite high levels of seismicity at **Savuka**, the operation maintained mining volume and gold output at the previous quarter's levels.

Mponeng was unable to sustain the exceptionally

high gold production of the previous quarter. Seismicity caused the loss of high grade areas and volumes were increased from lower grade areas to replace the lost production. The equipping programme at the **Mponeng** deepening project has been completed ahead of schedule. Gold output at **Elandsrand**, despite a volume increase, was 6% down on the previous quarter as a result of lower grades mined. Damage to high grade faces through seismicity, coupled with a drop in ore values in the eastern section, contributed to the lower gold performance at **Deelkraal**.

Ergo improved its efficiencies and profit

performance over the previous quarter despite various production delays experienced this quarter.

AFRICA

Sadiola (38%) has had an excellent quarter with gold production up 17% to a quarterly record of 62,000 ounces. This was largely achieved as a result of a record milled throughput of 558,000 tonnes and a 10% increase in recovered grade. Total cash costs improved by 12% to US\$107 per ounce. Unit total cash costs for the first quarter have been restated to reflect a change in estimating stockpiles. The mine has now achieved a record 245 days without a disabling injury.

The government of Mali has approved the Yatela

shareholders' and operator agreements. The construction and mining contracts have been awarded with the construction earthworks having started on schedule. The first gold production is scheduled for June 2001.

Navachab had another good quarter with

production of 17,600 ounces at a similar level to the previous quarter. Total cash costs improved by 4% to US\$208 per ounce. The mine has had no disabling injuries during the year. The operation retained its NOSA five-star safety rating.

SUMMARY OF OPERATIONS

The transaction relating to the purchase of an

effective 40% interest in the **Morila** project in Mali from Randgold Resources was completed on 3 July 2000. AngloGold has been appointed the operator of the mine. Construction, which began in 1999, is 70% complete and stockpiling of ore for commissioning is in progress. The first gold pour at Morila is expected during October.

AngloGold and Ashanti announced on 26 June

2000 that they had signed an agreement in respect of the acquisition by AngloGold of a 50% interest in the Geita project in Tanzania. The transaction, which is subject to regulatory, governmental, Ashanti shareholder and bank creditor approvals, is expected to be completed by the end of September this year. The two companies have also agreed the terms of a joint venture agreement that will govern how the two partners will jointly operate the Geita project. Geita is currently being commissioned and achieved its first gold pour during June, three months ahead of schedule. Under the current mine plan, annual production is estimated at 500,000 ounces at an operating total cash cost of under US\$180 per ounce. The official opening of the mine is scheduled for 3 August 2000.

NORTH AMERICA

At Jerritt Canyon (70%), the second quarter's production, at 57,000 ounces, was some 4% lower than the first quarter. The mill grade was 4% lower than the first quarter. Tonnage processed in the second quarter continued to be affected by wet weather conditions and was approximately 2% higher than the first quarter, but lower than expectations. Production lost during the first half of the year will be recovered in the next six months. Additionally, following the conclusion of an ore purchase agreement with Cortez, production is expected to be further increased by some 30,000 ounces over the rest of the year.

Total cash costs for the second quarter were

US\$199 per ounce, 7% higher than the first quarter, owing to increased underground mining costs and decreased grades.

Production at Cripple Creek & Victor (67%,

with a 100% interest in production ounces, subject to contractual obligations by the joint venture partners) was 63,000 ounces, 16% higher than the first quarter. Despite unanticipated expenditure arising from costs incurred to counter the cyanide ban initiative in Colorado and increased diesel fuel prices, total cash costs were US\$193 per ounce,

some 4% lower than the first quarter.

Phase 3 of the leach pad expansion was 95%

complete at quarter-end. The project will be completed under budget and ten weeks ahead of schedule.

Field exploration work will begin in Alaska and

Canada this summer following completion of two joint venture agreements during the second quarter.

SOUTH AMERICA

Gold production at the South American operations Morro Velho (100%), Serra Grande (50%) and Cerro Vanguardia (46.25%) was marginally higher than the previous quarter at 105,000 ounces. This is attributable to higher volumes of production at Serra Grande and Cerro Vanguardia and improved grade at Cerro Vanguardia and Morro Velho.

Total cash costs for the quarter were 5% lower

than the first quarter at US\$133 per ounce, chiefly because of lower costs at Morro Velho and Cerro Vanguardia and the higher production levels at Serra Grande and Cerro Vanguardia. Capital expenditure was some US\$2 million higher than the previous quarter.

Implementation of the NOSA system at the mining

operations is under way and appears to be yielding positive results: at Cerro Vanguardia the improving trend noted last quarter continues and Serra Grande remains below the Ontario benchmark although Morro Velho has yet to achieve this target.

In Brazil, drilling at the Corrego de Sitio project has

defined a new area of high grade oxide mineralization at Carvoaria Velha. Highly encouraging results have also been obtained in Colombia where AngloGold is in a joint venture with Conquistador Mines.

AUSTRALASIA

Although some residual impacts of the cyclonic rains that disrupted activities during the first quarter continued to be felt in the current quarter, production increased to 123,000 ounces (4% increase on the previous quarter).

Sunrise Dam (100%) lifted production to 49,000

ounces which is 5% up on the previous quarter. However, higher activity levels to replenish ore

stockpiles that had been depleted during the previous quarter when rain restricted mining, added to total cash operating costs and increased the unit rate to A\$365 (US\$215) per ounce. If the stock build component is excluded from total cash costs, the rate falls to below A\$300 (US\$177) per ounce, which is in line with the mine's performance profile in the longer term. The expansion of the operation, which was approved in April, is proceeding on schedule. The key mining contract has been awarded and mobilisation of the expanded mining fleet has begun. Award of the contract for the upgrade of the plant is imminent, with construction expected to commence in August.

Production from the Pine Creek (100%) operations

increased by 4% to 42,000 ounces. With operations recovering from the record wet season, Union Reefs lifted production by 13% to 29,000 ounces. Nowithstanding this improvement, the mine has continued to contend with low head grades from ore being mined in predominantly cut-back areas of the pit. As a consequence, production has been below expectations and, although total cash costs fell by 7% relative to the previous quarter, they are still high at A\$449 (US\$264) per ounce. Mining has now ceased at Brocks Creek and all processing is from stockpiles. Production for the quarter was 12,000 ounces at a total cash cost of A\$325 (US\$191) per ounce. Site rehabilitation is progressing in accordance with plans, which will see all operations cease during the December quarter of this year.

At Boddington (33.3%), production of just under

20,000 ounces was slightly less than the previous period. The oxide mine is now in the final phase of its life and, with ore being sourced from low-grade remnant ore blocks and stockpiles, head grades have

been low, resulting in a 10% increase in total cash costs to A\$385 (US\$227) per ounce. New resource and reserve estimates have been made for the Boddington Expansion Project (Wandoo). The resource now totals 720 million tonnes at 0.84 grams/tonne gold and 0.11% copper for 19.7 million ounces of gold (up 28%). The reserve totals 390 million tonnes at 0.87 grams/tonne gold and 0.12% copper for 10.9 million ounces of gold. The expansion feasibility study is progressing rapidly with completion of the full feasibility anticipated late in the third quarter.

Although the Tanami mine (40%) continued to feel

the impact of the heavy rain during the March quarter, production still increased in the June quarter by 21% (to 12,000 ounces) and total cash costs were reduced by 12% to A\$449 (US\$264) per ounce.

Field exploration activities resumed during the

quarter. The most encouraging results have been obtained from drilling on the Coyote discovery in the Tanami Desert which remains open at depth and along strike.

The second quarter saw the gold market considerably quieter than in the first three months of the year. The market opened under pressure from disappointing long positions, but physical demand once again steadied the price at around \$270 per ounce and allowed the market to regroup. The gold price closed the quarter in the high \$280s, and the average price for the quarter was \$280 per ounce, compared with \$290 in the first quarter.

By contrast, the currency market saw considerable

action. After weakening by almost 8% against a strong US dollar during the first quarter of the year, the rand lost a further 10% early in the second quarter to touch a record low of almost R7.20 to the dollar before recovering to close at around R6.80. The average of R6.87 for the quarter compares with the first quarter average of R6.30 to the dollar. The South African spot price of gold averaged R61,830 per kilogram for the period compared with R58,750 for the previous quarter.

The physical markets for gold presented no

surprises during this quarter. Demand in the major markets remained healthy, allowing for seasonally quiet periods in the developed markets, and the premonsoon lull in India.

On the supply side, the Swiss National Bank

commenced their planned sales of reserves without any particular negative reaction by the market, reflecting the degree to which official selling in terms of the Washington Agreement is accepted by market participants as an integral part of our market today. The ongoing sales of gold by the United Kingdom remain an anomaly in this respect, because of the method of selling by fixed auction into a traded market. This has the effect of requiring the market to absorb the metal in a manner at variance with otherwise effective market conventions.

Notwithstanding the early weakness in the gold

price, the quarter gave clear signals of underlying support levels for gold in the market. The market has consistently held up against the pressures of short selling at around US\$270 per ounce and has consistently managed to regroup above US\$280 per ounce. This support level underlines the importance of healthy and reliable physical demand for the metal. The positive impact of this support has been clear for some time, although market turmoil last year perhaps concealed the full value of physical demand for some months in 1999.

Combined with the steady physical support, lower

levels of speculative trading in gold this past quarter have contributed to a tighter trading range than has been seen for some time. The withdrawal of certain managed funds from the market has been a significant element in the reduced levels of speculative activity. Looking further forward, as long as physical demand continues to provide floor price support, there is likely to be greater potential for gold on the upside than on the downside. With limited fund selling and little likelihood of any recurrence of the large incremental hedge sales by some gold producers in 1999, there is probably substantially less liquidity on the upside, and sustained buying would be unlikely to meet the resistance of heavy selling that has occurred in recent years.

The AngloGold open hedge position as at the end

of June 2000 is shown overleaf. The net exposure in the hedge reflects some new hedge cover entered into for the Yatela, Morila and Geita projects, and a higher quarter-end spot price (\$288 per ounce against \$279 at the end of March) off which the hedge delta tonnage is calculated.

GOLD MARKET

*The delta position indicated above reflects the nominal amount of the option multiplied by the mean exercised. This is calculated using the Black and Scholes option formula with the ruling market programmed to 30 June 2000.

7

8

1.

The results included herein for the quarter and six months ended 30 June 2000, which are unaudite been prepared using accounting policies which are in accordance with the standards issued by the International Accounting Standards Committee and the South African Institute of Chartered Account Where appropriate, comparative figures have been restated.

2.

During the quarter 18,400 ordinary shares were allotted in terms of the Share Incentive Scheme, tincreasing the number of ordinary shares in issue at 30 June 2000 to 107,014,687.

3.

Last quarter it was reported that AngloGold had entered into a non-binding heads of agreement for acquisition of a 50% joint venture interest in the Geita project in Tanzania from Ashanti Goldfie Limited (Ashanti). On 26 June 2000 it was announced that the formal agreement had been signed wit Ashanti. The transaction, which is subject to regulatory and governmental approvals as well as As shareholders' and bank creditor ratifications, is expected to be completed by the end of September

4.

The agreement for the previously announced purchase from Randgold Resources Limited of a 40% intended in the Morila gold mining project in Mali was signed on 29 May 2000 and payment of the purchase pur

5.

An agreement for a revolving credit facility of US\$120 million was concluded with Crdit Agricole on 28 June 2000. The facility is intended for general corporate purposes, including overseas invesapproved by the South African Reserve Bank.

6.

Earnings per share have been calculated using the weighted average number of ordinary shares in i

7.

Orders placed and outstanding on capital contracts as at 30 June 2000 totalled R126.9 million, eq to US\$18.7 million at the rate of exchange ruling on that date.

8.

Dividend

The directors have today declared Interim Dividend No. 88 of 750 (1999: 900) South African cents ordinary share for the six months ended 30 June 2000. Payment details are as follows:

Certain forward-looking statements

Certain statements contained in this document, including without limitation, those concerning the economic outlook for the gold mining industry, expectations regarding gold prices and production, the completion and commencement of commercial operations of certain of AngloGold's exploration and production projects, and its liquidity and capital resources and expenditure, contain certain forward-looking statements regarding AngloGold's operations, economic performance and financial condition. Although AngloGold believes that the expectations reflected in such forward-looking statements are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of, among other factors, changes in economic and market conditions, success of business and operating initiatives, changes in the regulatory environment and other government actions, fluctuations in gold prices and exchange rates, and business and operational risk management.

REPORT

FOR THE QUARTER AND SIX MONTHS ENDED 30 JUNE 2000

HIGHLIGHTS

Company results for the quarter

Overall improvement in performance is reflected in a

10% increase in operating profit in rand terms.

Gold production increases by 3% to 1.8 million oz. Total cash costs are reduced by 5% to US\$207/oz. Increased deferred tax and reduced interest, together,

reduce headline earnings by 0.4% to R458 million.

Regional operating results for the quarter

SOUTH AFRICA

A strong recovery at Great Noligwa and TauTona,

achieving many of the objectives set at last quarter end, and an increase in gold production of 19% and 16% respectively.

Corrective action in place at Bambanani, Elandsrand

and Joel but more work is needed.

Gold production rises by 25,000 oz. Volume and value productivity indices improve,

despite a 2% decline in grade.

Costs and tax reduce headline earnings marginally

by 1%.

AFRICA

Record production and a 12% improvement in total

cash costs at Sadiola.

Continued good performance at Navachab.

First gold is poured at Geita, three months ahead of

schedule.

NORTH AMERICA

Lower grades and continued bad weather reduce

production at Jerritt Canyon by 4%, but production

losses for the first two quarters will be recovered by year end.

Gold production increases by 16% at CC&V. Leach pad extension at CC&V is due for completion

ten weeks early.

SOUTH AMERICA

Gold production is 1% up to 105,000oz. Total cash costs are 5% lower at US\$133/oz.

AUSTRALASIA

Sunrise Dam overcomes its first quarter problems

and increases production by 5% to 49,000oz.

Production is up at Pine Creek and Tanami, but

slightly lower at Boddington.

Growth and market development
AngloGold buys a 25% stake in OroAfrica, South

Africa's largest gold jewellery producer. It has a strategic partnership with Filk, the world's largest gold chain producer, and provides excellent growth opportunities in South Africa and worldwide.

Project AuTEK is launched to develop new industrial

uses for gold, and a gold catalysis symposium is planned for next year.

Company results for the half year Operating profit virtually unchanged at R1,570 million. Headline earnings before deferred tax rate adjustment

down 7% due to lower interest and earnings from associates.

Attributable profit down 48% due to the inclusion of

abnormal items in the previous period.

A dividend of R7.50 per share is declared, giving a 6%

yield on a share price of R269 per share.
