Report

for the six months ended 30 June 2017

FIRST HALF REVIEW

- Production of 1.748Moz after strong second-quarter recovery; on track to meet full year guidance
- Total cash costs \$796/oz, all-in sustaining costs (AISC) \$1,071/oz; reflects planned brownfield investment and stronger currencies
- Adjusted headline loss of \$93m includes retrenchment provision of \$47m and silicosis provision of \$46m
- Free cash outflow of \$161m, with working-capital lock-ups a continued challenge
- Brownfield projects to improve life and portfolio mix, all on budget and on schedule
- Decisive action taken to stem losses in South Africa, with restructuring talks under way
- Third, consecutive fatality-free quarter achieved; new safety records set across the portfolio
- Net debt of \$2.151bn and Net debt to Adjusted EBITDA ratio of 1.56 times

Financial and Operating Report

FINANCIAL AND CORPORATE REVIEW

AngloGold Ashanti delivered a solid first half ended 30 June 2017, reflecting a strong and safe operating recovery in the second quarter from the first quarter of the year, particularly at its core South African operations. New safety benchmarks were set, with the company recording three, consecutive fatality-free quarters for the first time in its history. The Company remains on track to meet full-year cost and production guidance provided at the beginning of the year in addition to advancing key brownfield projects that aim to improve mine lives and margins.

AngloGold Ashanti has continued its strategic focus on generating free cash flow on a sustainable basis, while ensuring it maintains appropriate balance sheet flexibility. Having delivered significant achievements in improving its cost structure, balance sheet and portfolio mix, the Company's management will continue to work to strengthen the foundation of the business by unlocking value at its existing assets. The execution of its slate of high- return projects with relatively low capital expenditure and attractive payback periods will become the next source of improved cash flows and portfolio quality enhancements.

“We saw an exceptionally strong operational recovery in the second quarter after a slow start to the year, and we achieved that whilst setting new safety benchmarks across our portfolio,” Chief Executive Officer Srinivasan Venkatakrishnan said. “Our brownfield projects are on budget and on schedule, and we are working diligently to maintain this strong momentum through the rest of the year. We continue to focus on our long-term strategy of improving the underlying quality of our portfolio through investment in high-return projects and removal of loss-making ounces.”

Production was 1.748Moz at a total cash cost of \$796/oz for the six months ended 30 June 2017, compared to 1.745Moz at \$706/oz in the first six months of 2016. Notably, total cash costs in the second quarter of the year improved to \$781/oz compared to \$813/oz in the first quarter, as production over that period rose 11% to 918,000oz, from 830,000oz.

Lower grades and the slow production start to the year from the South African operations were offset by another strong performance from the International operations, with a notable improvement from Siguiri where higher grades helped drive a 25% increase in production. Iduapriem, Kibali, Tropicana and AGA Mineração also reported solid performances in the first half of the year. The stronger South African rand and Brazilian real continued to weigh on margins, while the planned increase in capital expenditure on the brownfield project portfolio also contributed to the higher AISC. The rand and real were both 14% stronger versus the dollar in the first half of 2017 compared with the first half of last year, while the gold price was only 1% higher.

AISC increased by \$160/oz, or 18%, from \$911/oz in the six months ended 30 June 2016 to \$1,071/oz in the six

months ended 30 June

2017. Nonetheless, work is continuing across the portfolio to assess opportunities to reduce and/or prioritise capital spend across the group.

Cash inflow from operating activities decreased by \$155m, or 33%, from \$476m for the six months ended 30 June 2016 to \$321m in the six months ended 30 June 2017, reflecting higher operating costs and negative working capital movements, partially offset by a 1% increase in the gold price and a 2% increase in gold sales.

The free cash outflow for the six months ended 30 June 2017 was \$161m (\$119m outflow in the first quarter alone), with higher capital expenditure, operating costs, and adverse working capital movements, resulting in a \$269m decrease when compared to the six months ended 30 June 2016. The lockup of VAT receivables in certain jurisdictions in Continental Africa continues to present a challenge, hampering free cash flow generation.

Adjusted headline loss of \$93m, or 23 cents per share was recorded in the first half of 2017, reflecting the South Africa redundancy provisions of \$47m (post-tax) related to potential outcome of the Section 189 process, and an estimated provision in respect of the silicosis class-action law suit of \$46m (post-tax). Excluding the impact of these non-cash provisions, the adjusted headline earnings would have been neutral for the first half. As a consequence of the restructuring of certain of the South African business units, an impairment of \$86m (post-tax) was recorded in earnings for the period. These impairments are non-cash in nature and are included in the calculation of basic earnings, but excluded from the calculation of headline loss and adjusted headline loss for the period.

Adjusted earnings before interest, tax, depreciation and amortisation (Adjusted EBITDA) of \$610m during the first half of 2017 decreased by \$171m, or 22%, from the \$781m recorded during the same period in 2016. The Adjusted EBITDA excludes the impact of the South African redundancy costs and impairments but includes the impact of the estimated provision in respect of the silicosis class-action law suit of \$63m (pre-tax). The ratio of net debt to Adjusted EBITDA at 30 June 2017 was 1.56 times compared with 1.44 times at 30 June 2016. The current net debt to Adjusted EBITDA ratio falls well below the covenant ratio of 3.5 times which applies under our revolving credit facility agreements (RCFs), highlighting the success of Anglogold Ashanti's continued efforts to maintain financial flexibility.

Net debt rose by 3% to \$2.151bn at 30 June 2017, from \$2.098bn at the same time last year. Management remains focused on funding the capital investment programme whilst paying down existing RCFs at a steady pace, as the opportunity arises. The balance sheet remains robust, with liquidity comprising \$880m available on the \$1bn US dollar RCF at 30 June 2017, A\$240m undrawn on the A\$500m Australian dollar RCF, approximately R1.5bn available from the South African RCF and other facilities and cash and cash equivalents of \$164m at 30 June 2017.

Capital expenditure (including equity accounted investments) increased by \$136m, from \$318m for the six months ended 30 June 2016 to \$454m for the six months ended 30 June 2017. This increase was largely due to increased investment in asset improvements aimed at improving mine lives and cost profiles across the portfolio. The capital expenditure in Continental Africa saw an increase of \$80m with higher spend at Geita and Kibali as underground development advances, and at Iduapriem as work continues on the main cutback. In Australia, expenditure at Tropicana doubled to \$48m as mine optimisation work, geared to improve the medium- and longer-term profitability of the mine, progressed. It is expected that Group capital expenditure will increase in the second half of the year in line with past trends, whilst remaining within the guided range.

SAFETY UPDATE

AngloGold Ashanti recorded its third, consecutive fatality-free quarter, a first in the history of the Company. This record includes the South

African ultra-deep mines, which have been fatality-free since 27 July 2016. At 30 June 2017, the South African operations recorded 339

days without a fatal accident, a remarkable milestone given the depth and challenging mining conditions that these operations face.

The South Africa region has now accumulated more than seven million fatality-free shifts, including the Kopanang mine which reached a

million fatality-free shifts on 21 July 2017. Moab Khotsong mine achieved 2 million fatality-free shifts and was awarded the 2016 AGA Global

Safety Award for achieving a progressive year-on-year improvement in Lost Time Injury Frequency Rate for three consecutive years, a

progressive year-on-year improvement in All Injury Frequency Rate for six consecutive years and sustainable improvements in the

implementation of the Safety Management System over the previous two years. As of 30 June 2017, Moab Khotsong achieved 21

consecutive months without a workplace fatality.

This safety performance improvement is a result of a progressive implementation and integration into daily work routines of the group safety

strategy. The main areas of the strategy include focus on fatality risks by ensuring every employee understands and manages hazards and

associated risks on a continuous basis, that critical controls remain in place with compliance to set work routines, and that there is diligent

reporting of high potential incidents, which are addressed whilst making optimal use of technology.

The group's All Injury Frequency Rate (AIFR) for the quarter was 7.52, a 16% improvement from 8.92 in the first quarter of the year. The

AIFR in the South Africa region was 12.56 injuries per million hours worked, improving 14% compared to the first quarter, whilst International

operations improved by 15% compared to the first quarter.

Yatela, Geita, Iduapriem, Obuasi, La Colosa, Gramalote, Quebradona and Greenfields Exploration recorded an injury free quarter.

OPERATING HIGHLIGHTS

The **South Africa** region produced 435,000oz at a total cash cost of \$1,092/oz for the six months ended 30 June 2017 compared to

486,000oz at a total cash cost of \$809/oz in the same period last year.

The second quarter registered a recovery from a poor first quarter, whereby the poor adherence to mining schedules

experienced in the first two months of the year - which resulted in poor face-length availability and limited access to higher-grade areas - were largely remedied.

Notably, in the second quarter, there was a 17% increase in production at Moab Khotsong, a 107% increase in production at Kopanang, and a 22% increase in the production contribution from MWS, in each case, over the first three months of the year.

The turnaround at Moab

Khotsong was as a result of production efficiencies, in addition to infrastructure enhancements that led to improved material supply and

increased face time. At Kopanang, where improvements were due to the successful implementation of a revised work plan strategy, the

mine continues to face systemic challenges of a largely depleted ore reserve, low grades and poor efficiencies linked to the distances of

work places from central infrastructure. At MWS, the higher grades reclaimed across the sulphur pay dam and the upgrade to the pump

station boosted volumes.

For the six-month period ended 30 June 2017, the region faced various challenges that impacted negatively on volumes mined with lower

yields presenting the biggest challenge, dropping by an average of 9% year-on-year. TauTona and Mponeng mined in lower-grade areas

as planned, while Kopanang focused on clearing waste tonnes in the shaft ore-pass. AISC for the South African operations for the six

months ended 30 June 2017 were \$1,259/oz, compared to \$958/oz in the same period of 2016. Total cash costs were unfavourably impacted by lower output, stronger local currency against the dollar, inflationary pressures mainly related to labour, consumables and power as well as an unfavourable by-product contribution.

At West Wits, production was 163,000oz at a total cash cost of \$1,255/oz for the six months ended 30 June 2017 compared to 214,000oz at a total cash cost of \$786/oz in the same period last year. Tau Tona's production was significantly lower following the challenges faced during the first half of the year where fractured ground conditions and inefficiencies were exacerbated by the move into lower-grade areas as the mine life nears its end. The Savuka section continued at lower volumes as available mining ground was reduced following a decision to halt the re-opening up project on 116 level for safety and risk reasons. Additionally, the mine continues to suffer production challenges as this section struggles to recover following the seismic incident that occurred in the second quarter of 2016.

Mponeng's production was lower compared to the same period last year due to changes in the orebody structure resulting in lower tonnes milled, and was also impacted by the planned move from higher grade areas resulting in 11% lower yield year-on-year.

At Vaal River, production was 174,000oz at a total cash cost of \$1,003/oz for the six months ended 30 June 2017 compared to 173,000oz at a total cash cost of \$843/oz in the same period last year. Moab and Kopanang delivered improved volumes in the second quarter after the slow start to the year. Moab Khotsong's production for the six months ended 30 June 2017 was 3% higher compared to the same period last year despite the production challenges experienced in the first quarter of the year. The turnaround was driven by improved production during the second quarter. Additionally, logistical improvements, which included enhancements on the chair-lift and material transportation, resulted in improved material supply and increased face-time.

Kopanang's production was down for the six months ended 30 June 2017 compared to the same period last year, mainly due to reduced face values resulting from a lower mining mix and dilution from clearing of waste tonnes in the ore-pass. The mine continued to produce gold at AISC of \$1,682/oz, well above the gold price.

Surface Operations produced 92,000oz at a total cash cost of \$970/oz for the six months ended 30 June 2017, compared to 93,000oz at a total cash cost of \$797/oz in the same period last year. The operations were impacted by poor performance from hard rock operations, and constraints in getting material into the Kopanang and West Gold plants in the ore receiving section. Additionally, there was limited mill availability due to plant shut-down for repairs. A number of measures have been identified which will improve the tonnage throughput at this gold plant, including completing mill refurbishments by the end of the year.

Production at MWS was up 9% compared to the same period last year mainly boosted by 11% increase in yield from reclaiming higher-grade areas across the sulphur pay dam and the recent upgrade to the pump station. MWS was the lowest cost producer for the South African region during the six months at a total cash cost of \$783/oz.

An initiative has commenced to correct the significant fall-off in gold reclaimed which occurred in the first quarter of 2017 through the two circuits servicing the flotation plant. It is anticipated that the flotation and uranium circuits will be recommissioned during the third quarter of 2018.

The **Continental Africa** region produced 665,000oz at a total cash cost of \$721/oz for the six months ended 30 June 2017 compared to 620,000oz at a total cash cost of \$690/oz in the same period last year. Production increased by 7%, mainly driven by stronger performances from Siguiri and Iduapriem, which benefited from improved grade, whilst Kibali recovered from the prior year setback when production and costs suffered during the test commissioning of the sulphide circuit. Continental Africa's AISC for the six months ended 30 June 2017 was \$966/oz, compared to \$848/oz in the same period of 2016, driven largely by the 91% increase in sustaining capital expenditure, from \$78m to \$149m.

In the **Democratic Republic of the Congo**,

30 June 2017 compared to 114,000oz at a total cash cost of \$802/oz in the same period last year. Production was 11% higher than the same period last year. Total cash costs increased on the same period last year mainly due to higher strip ratios in the Pakaka and Komobokolo pits, 14% higher milled tonnes and a slightly lower grade. This was partly offset by a significant improvement in ore recovery to 83% due to the additional fine grinding capacity and improved management of the various ore types. Power costs were also higher due to a very low rainfall period resulting in a reduction in hydropower availability. AISC were higher due to sustaining capital expenditure associated with off-shaft development, additional fine grinding and CIP capacity, and capitalised stripping.

In **Ghana**, Iduapriem's production was 107,000oz at a total cost of \$847/oz for the six months ended 30 June 2017 compared to 99,000oz at a total cash cost of \$931/oz in the same period last year. Production increased 8% as a result of higher recovered grades from the base of the Ajopa pit, partly offset by a decrease in tonnages treated. Total cash costs decreased by 9% mainly due to the increased production, also assisted by lower fuel and power prices as the mine benefited from a reduction in regulated fuel levies. Obuasi remained on the care and maintenance phase while future operational options for the mine are being evaluated.

In **Guinea**, Siguiri's production was 157,000oz at a total cash cost of \$712/oz for the six months ended 30 June 2017 compared to 126,000oz at a total cash cost of \$706/oz in the same period last year. The 25% increase in production was driven by increased recovered grade as

the mine accessed the Seguelen pit, though the cost benefit was partially offset by the longer haulage distance. Further, costs in the six months ended 30 June 2016 reflected a once-off benefit for a favourable settlement of historical rate adjustment claims with the previous mining contractor.

In **Mali**, Morila's production was 12,000oz at a total cash cost of \$993/oz for the six months ended 30 June 2017 compared to 13,000oz at a total cash cost of \$965/oz in the same period last year. Production from processing lower-grade tailings storage material continued during

the quarter, partly boosted by an increase in tonnes treated due to the relatively soft ore material. Total cash costs consequently increased as a result of lower-grade throughput.

At **Sadiola**, production was 31,000oz at a total cash cost of \$862/oz for the six months ended 30 June 2017 compared to 36,000oz at a total cash cost of \$826/oz in the same period last year. Production decreased as the limited operational flexibility in the depleting oxide material continued with a negative impact on recovered grade, partly offset by an increase in tonnes treated. Total cash costs increased due to the lower production.

In **Tanzania** Geita's production was maintained at 229,000oz at a total cash cost of \$555/oz for the six months ended 30 June 2017 compared to 229,000oz at a total cash cost of \$496/oz in the same period last year. Production was in line with planned decrease in tonnage throughput, offset by an increase in recovered grade. Total cash costs increased primarily due to higher fuel prices, higher mining and processing cost per tonne compared to the previous period.

The Americas produced 393,000oz at a total cash cost of \$622/oz for the six months ended 30 June 2017 compared to 388,000oz at a total cash cost of \$549/oz in the same period last year. Production was boosted by strong performances by Cerro Vanguardia and AGA Mineração, both of which had plant improvements. AISC for the six months ended 30 June 2017 were \$965/oz, compared to \$816/oz in the same period a year ago. The cost increase is attributable to lower grade and an unfavourable exchange rate.

In **Brazil**, production was 254,000oz at a total cash cost of \$694/oz for the six months ended 30 June 2017 compared to 252,000oz at a total cash cost of \$545/oz in the same period last year.

At AngloGold Ashanti Mineração, production was 197,000oz at a total cash cost of \$642/oz for the six months ended 30 June 2017 compared to 188,000oz at a total cash cost of \$531/oz in the same period last year. Production increased by 5% as a result of higher underground tonnages mined, coupled with improved plant performance at the Córrego do Sítio complex. Total cash costs were higher compared to same period last year mainly due to the exchange rate impact from a stronger Real against the dollar and inflationary impact, in addition to higher heap leach costs.

At Serra Grande, production was 57,000oz at a total cash cost of \$876/oz for the six months ended 30 June 2017, compared to 64,000oz at a total cash cost of \$584/oz in the same period last year. Production was affected by lower recovered grade as a result of a revised production plan, partially offset by higher tonnage treated. The mine also faced cracking at the underground section of the mine which necessitated a change in the sequencing at the rock face. Total cash costs were higher because of lower production, exchange rate impact from a stronger Real against the dollar and higher operating costs.

In **Argentina**, Cerro Vanguardia produced 139,000oz at a total cash cost of \$491/oz for the six months ended 30 June 2017 compared to 136,000oz at a total cash cost of \$543/oz in the same period last year. Production increased mainly due to higher tonnes treated driven by operational and metallurgical improvements at the plant together with higher grades resulting from the flexibility of the mining model.

Total cash costs were lower mainly as a result of a favourable stockpile movement due to higher volume of stockpile inventory derived from higher tonnes mined. Costs also benefited from higher by-product volumes and the favourable exchange rate. These positive effects were partially offset by an end to the Patagonia ports rebate programme, which ended in December 2016.

In **Australia** production was 255,000oz at a total cash cost of \$775/oz for the six months ended 30 June 2017, compared to 251,000oz at a total cash cost of \$806/oz in the same period last year. Production was slightly higher due to an increase in gold output at Tropicana, which more than offset a 5% drop in production at Sunrise Dam. The higher production at Tropicana also contributed to lower total cash costs for the Australia Region for the period.

At Sunrise Dam, production was 107,000oz at a total cash cost of \$977/oz compared to 113,000oz at a total cash cost of \$858/oz in the same period last year. Slightly lower mill throughput and a 5% lower mill-feed grade of 2.08 g/t were partially offset by a marginal increase in metallurgical recovery. The lower head grade was in part due to a negative variance in mined grades in the Astro orebody. Astro is a minor contributor to future production. A plan is in place to accelerate development and grade control drilling in the Vogue and Cosmo work areas to lift the mined grade. Total cash costs were higher due to lower gold production and higher underground mining costs, with a 17% increase in ore tonnes mined compared to the six months ended 30 June 2016. The EPC contract for construction of the Recovery Enhancement Project was executed during the six months ended 30 June 2017.

At Tropicana (70%) production was 148,000 oz at a total cash cost of \$575/oz compared to 137,000oz at \$704/oz in the same period last year. The higher production was due to a 12% increase in mill throughput following completion of the processing plant optimisation and expansion project late in 2016. The increase in production contributed to lower total cash costs. Work continued during the six months ended 30 June 2017 on the Long Island Study, which is investigating cutback options to the Boston Shaker, Havana and Havana South open pits utilising short-haul open pit options. These include using the completed Tropicana pit as a void into which waste will be backfilled, reducing waste haulage costs. The study is expected to be completed in the fourth quarter of 2017.

CORPORATE UPDATE

Section 189

On 28 June AngloGold Ashanti announced the decision to restructure its South African operations to ensure the future viability of the balance of its South African business. The company took the difficult decision to begin a consultation process with employees in terms of section 189 and 189A of the Labour Relations Act, with respect to restructuring certain of its South African business units. This follows a review of the options to safely turn around the performance of these loss-making operations.

Some of our older mines in the South African region have reached the end of their economic lives, several decades after they started production. These mines face systemic challenges, including near-depletion of ore reserves, increasing depth and distance from central infrastructure, declining production profiles, and cost escalations that have continued to outpace both inflation and the gold price.

The cost performance of certain operations, notably TauTona and Kopanang, has been a clear demonstration of these challenges, with all-in costs in the first-half of this year of \$1,858/oz and \$1,682/oz respectively. This compared with an average gold price over that period of \$1,236/oz. Both mines also sustained significant operating losses in 2016.

This consultation process has commenced with the organised labour groups, facilitated by the Council for Conciliation, Mediation and Arbitration (CCMA). The consultations are aimed at safely returning the South African business to profitability, whilst mitigating job losses. While AngloGold Ashanti will make efforts to limit the impact on employment, this restructuring contemplates some 8,500 roles across the business. For the full release see: http://www.anglogoldashanti.com/en/Media/news/Pages/20170628_AGARestructureSAOps.aspx

Accounting provision on Silicosis

On 1 August 2017, AngloGold Ashanti announced that it had raised an accounting provision in respect of the potential settlement of the silicosis class action claims and related costs, as a result of the progress made by the Gold Working Group (GWG) on Occupational Lung Disease (OLD) since 31 December 2016 on a variety of issues. For more information, refer to Note 5 - Special Items in the condensed consolidated financial statements. The GWG includes AngloGold Ashanti, Anglo American South Africa, Gold Field, Harmony Gold Mining Company and Sibanye Gold and was formed in November 2014 to address issues relating to compensation for OLD in the gold mining industry in South Africa. African Rainbow Minerals have subsequently joined the working group.

Passage of New Legislation in Tanzania

AngloGold Ashanti noted the enactment by the Republic of Tanzania's Parliament and publication in the Country's official Government Gazette of the Natural Wealth and Resources (Permanent Sovereignty) Act, No 5 of 2017, the Natural Wealth and Resources Contracts (Review and Re-Negotiation of Unconscionable Terms) Act, No 6 of 2017 and the Written Laws (Miscellaneous Amendments) Act, No 7 of 2017.

Anglogold Ashanti's indirect subsidiaries, Samax Resources Limited and Geita Gold Mining Limited (the Subsidiaries) are parties to a Mine Development Agreement (MDA) in relation to the development and operation of the Geita gold mine in Tanzania (Geita Mine), which governs the relationship between the Subsidiaries and the Government of Tanzania (GoT) in relation to Geita Mine. The MDA was instrumental in

the decision to make the significant investment in the development of Geita Mine, at a time of significantly lower gold prices and when Tanzania was an untested jurisdiction for new mine development.

The three pieces of new legislation in question purport to make a number of changes to the operating environment for Tanzania's extractive industries, including those in its mining, and oil and gas sectors. These changes include, among others: the right for the Government of Tanzania (GoT) to renegotiate existing MDAs at its discretion; the provision to the GoT of a non-dilutable, free-carried interest of no less than 16% in all mining projects; the right for the Government to acquire up to 50% of any mining asset commensurate with the value of tax benefits provided to the owner of that asset by the GoT; removal of the refund of input VAT incurred; an increase in the rate of revenue royalties from 4% to 6%; requirements for local beneficiation and procurement; and constraints on the operation of off-shore bank accounts.

Anglogold Ashanti's subsidiaries are seeking a constructive dialogue with the GoT, and its agencies, to gain assurances that Geita Mine will not be affected by these legal and fiscal changes. On 13 July, AngloGold Ashanti announced that its subsidiaries in Tanzania made a decision to take the precautionary step of safeguarding their interests under the Mine Development Agreement (MDA), by commencing arbitration proceedings under the rules of the United Nations Commission on International Trade Law, as provided for in the MDA.

For the full release see:

http://www.anglogoldashanti.com/en/Media/news/Pages/20170713_Geita.aspx

Despite the dispute over the legal basis for the increased royalty rate, from 4% to 6%, and the imposition of 1% clearing fee for the export of gold, Tanzanian officials have insisted upon receipts for such payments as a condition of the release of exports. Whilst our subsidiaries in Tanzania do not accept that they are bound to pay either new levy, these are being paid under protest to ensure continued processing of export shipments.

In addition to the abovementioned legislation, the Government amended the Minimum (Mining Shareholding and Public Offering) Regulations on 24 February 2017, by publishing the Mining (Minimum Shareholding and Public Offering) (Amendment) Regulations, 2017 (as revised, the Mandatory Listing Regulations). This requires companies with a Special Mining Licence (SML) to float 30% of their total issued shares on the Dar es Salaam Stock Exchange in Tanzania by 24 August 2017. The regulations contemplate the possibility that a company may proceed with a listing and fail to secure the minimum local shareholding. In such circumstances the Minister of Energy and Minerals may at the request of the company and on the recommendation of the Capital Markets and Securities Authority grant a waiver to the minimum local shareholding requirement.

The Subsidiaries's position is that the Mandatory Listing Regulations ought not apply to them for a number of legal and practical reasons,

including being inconsistent with the provisions of the MDA. The Subsidiaries are in ongoing engagement with all levels of Government.

OBUASI UPDATE

On 8 April 2016, AngloGold (Ghana) Limited (AGAG) filed a request for arbitration against the Republic of Ghana (GoG). AGAG filed this request with the International Centre for Settlement of Investment Disputes (ICSID), an international arbitration institution headquartered in Washington, D.C., which facilitates dispute resolution between international investors and host states. AGAG is seeking relief from GoG for breaching the provisions of its Mining Lease by failing to restore law and order on its Mining Lease after the incursion of illegal miners. These actions prevented AGAG from peaceful enjoyment of the areas covered under its Mining Lease. GoG may raise counterclaims against AGAG in response to AGA's request for arbitration.

UPDATE ON CAPITAL PROJECTS

Kibali

All four new Ultra Fine Grind mills and the pump-cell circuit have been commissioned and are now in operation. The second hydropower plant at Amburau was commissioned in the first quarter taking hydropower capacity to 32MW. The third hydropower plant at Azambi remains on schedule with first power expected in the second quarter of 2018.

The underground declines completed 2.5km of capital development, while the shaft material handling system progressed according to plan during the quarter; commissioning is scheduled to begin in the third quarter. First ore from underground via the shaft is now scheduled for the last quarter of the year.

The Gorumbwa resettlement programme is progressing on schedule, with the first phase of housing and community infrastructure already handed over. A regional development plan, including health, education and infrastructure was also agreed with the Provincial Governor, which will be rolled out in partnership with the state to improve living standards in the area.

Mponeng Phase 1 and 2

The Mponeng Phase 1 project infrastructure construction continued ahead of schedule. The commissioning of the MC3 conveyor belt was completed during the second quarter. This is the main conveyor which is a component of the ore handling system that transfers onto existing MC2 conveyor. The MC3 will transport the reef and waste from the lower production level - the 126 level - in the decline. Prior to the MC3 conveyor belt, the rock was transported by dump truck up to 123 level. The remainder of the project milestones pertaining to the construction of ore handling infrastructure, as well as the water handling infrastructure, reef pass from 123 level, ventilation pass and secondary support, remain ahead of schedule and are anticipated to be completed during the third quarter of 2017.

The ramp-up of ore reserve development on the eastern side of 126L has hit challenging ground conditions, requiring

rehabilitation that has delayed the ore reserve development schedule. The ramp-up on the western side, however, has continued according to schedule. Production ramp-up from 126L is anticipated in early 2018.

The feasibility study for the life of mine extension project continues with an anticipated completion and Board ratification date set for Quarter 3 2018. Due to current capital constraints, the early work associated with the life of mine extension project (inclusive of the original Phase 2 early works) has been deferred and will continue upon project approval being granted post the completion of the feasibility study.

Siguiri Combination Plant

The project remains on schedule. All major goods and services required for the project have been sourced and contracted, and are in the process of mobilisation and establishment in accordance with the project delivery timelines.

During the second quarter, the major contracts for the power plant construction, EPCM Services and Civil construction works were adjudicated and awarded. The establishment of the on-site construction camp has also been completed.

The main mechanical contract has been adjudicated and will be awarded in the third quarter of 2017.

Sadiola Sulphide Project

At this time there has been no change in the status of the Sadiola Sulphide Project. Discussions with the Government of Mali continue. A decision to move forward will be contingent upon the Government's renewal of the construction and operating permits, the power agreement and fiscal terms related to the Project. In parallel, a review of the current life-of-mine plan is being undertaken.

GREENFIELDS

Greenfields exploration activities were undertaken in Australia, Colombia, Brazil, Argentina, USA, and Tanzania during the first half of the year. Greenfields exploration completed 21,502m of drilling globally during the six months ended 30 June 2017, with total expenditure amounting to \$14m.

In **Australia**, exploration activity was focussed on the Butcher Well and Lake Carey farm-in (AngloGold Ashanti earning 70%), within the Laverton district. The RC and diamond drilling at Butcher Well was completed in early June. In first half of the year, 24 RC/diamond holes were completed for 9,962m. The steeply west-dipping Enigmatic zone extends down-dip to a vertical depth beyond 400m. Intercepts of 5m @ 4.15g/t Au from 322m in BWD022 and 17m @ 7.79g/t Au from 375 m in BWD023* define a thicker and higher-grade shoot within the zone. These holes confirm the intersection of drill hole BWD013, which returned 20.7m @ 6.06g/t Au from 351m. A new mineralised zone has been identified 200m East of the Southern part of the Enigmatic pit. Hole BWD018 intersected 14m @ 6.15g/t Au from 394m, 10m @

5.05g/t Au from 459m and 12m @ 4.08g/t Au from 475m, and hole BWD026 intersected 4m @ 5.90g/t Au from 300m. Hole BWD020 drilled 300m to the South intersected 8m at 5.4g/t Au from 342m. This discovery is named the Old Camp zone with these intersections open both laterally and vertically.

The Mt Minnie aircore drilling programme started early in June. The Mt Minnie structure extends for 10km in a north-south orientation and forms the northern extension of the Butcher well system. A total of 107 holes were drilled in the second quarter for 6,433m. A ground gravity programme of approximately 15,000 stations at 100m spacing has been completed over the western part of the Butcher well district. At the Oak Dam project, within the Tropicana belt (Tropicana JV with 70% AngloGold Ashanti), geochemical sampling, using vacuum drilling, started in early June. A total of 768 holes have been completed, the remaining 1,400 holes should be completed by end of the third quarter. Assay results are pending.

In the **United States of America**, a reconnaissance rotosonic drill programme was completed at the Celina Project in Minnesota (100% AngloGold Ashanti) with 29 holes drilled for 1,034m. Early in the first quarter, a regional magnetic airborne survey was also completed in Minnesota at 17,687km, with 50,697km in total. An option to earn 100% of the Silicon Project in Nevada was signed with Renaissance Gold. AngloGold Ashanti will have a 3-year option to acquire 100% of the property for a total consideration of \$3m cash in staged payments and a 2.5% NSR. Geological mapping and sampling were completed.

In **Colombia** at Nuevo Guintar (100% AngloGold Ashanti) activities are focused at reaching a decision point. Soil sampling, ground magnetic and IP programmes were completed and a 1200m diamond drilling programme initiated in June with 553m completed. The principle target is a 500m by 300m gold and multi-element soil geochemistry anomaly with an epithermal signature.

In **Brazil**, work concentrated on the Tromai Project which covers a large ~2,000km² highly prospective tenement package (AngloGold Ashanti earning 70% from Trek Mining). Diamond and RC drilling was initiated (1,573m DD and 2,207m RC in the second quarter) over known structures associated with artisanal mining and soil geochemistry. The aeromagnetic and radiometric data (38,000 line km) collected in last quarter of 2016 and the first quarter in 2017 was processed and final products delivered. Geochemistry results from the first batch of drill core were received with minor anomalous results so far. With significant areas of the land package covered by recent sediments, soil or laterite, the objective is to use the geophysics to delimit well defined high priority exploration corridors within the large land package for more detailed drill target definition and drill testing in the second half of the year.

In **Argentina** early stage Greenfields generative exploration programmes progressed.

Also refer to the Press Release issued on 13 July 2017 on:

http://www.anglogoldashanti.com/en/Media/news/Pages/20170711_AGAA_ButcherWells.aspx.

BROWNFIELDS

During the first half of 2017, Brownfields exploration activities were undertaken across the globe. Brownfields exploration completed

261,185m of drilling for a total expenditure for the first half of \$27m (capitalised) and \$34m (expensed).

South Africa: Mineral Resource conversion drilling from surface continued at Mponeng. Both UD 58A and UD 60 were completed and the drill sites have been rehabilitated and signed off. The contracts for the new holes UD 61 and UD 63 are pending signature.

Tanzania: Exploration drilling activities included Mineral Resource conversion drilling at Nyankanga Block 5, Star & Comet Cuts 2 & 3

Underground and Geita Hill East, Mineral Resource delineation drilling at Matandani, Nyankanga Block 5 underground, 3D Seismic Target

5 and Star & Comet Cut 2 NW, and infill and underground drilling at Star & Comet (Cut 2 and 3). During the six months ended

30 June 2017, 143 drillholes totalling 23,299m were completed for the combined surface and underground exploration drilling programmes.

Underground drilling at Geita continues to confirm the continuity of the ore zones at both Star & Comet Cut 2 and Cut 3, with encouraging

intersections also returned from the down-plunge extension of the Cut 2 orebody to the northwest. At Nyankanga, drilling was completed

from surface and underground into the Block 5 orebody with several significant intersections reported.

Guinea: A total of 21,811m was drilled. Infill drilling took place at Seguelen PB2, Kami, Tubani, and Silakoro, and reconnaissance drilling at Silakoro NE, Kolenda South (Ellis Park) and John Deer.

Preliminary interpretation of the airborne magnetic and radiometric geophysical survey over portions of Block 1 and Block 2 and the Saraya

West license was completed. Target generation and evaluation of Block 1, the Corridor Blocks and TSF Exploration Licences was carried

out. A soil sampling programme to cover an untested area in the northwest of Block1 was initiated and is nearing completion.

Ghana: Exploration at Iduapriem was focused on drilling at Block 1W/ Nueng, Block 4S and Mile 5. A total of 6,039m drilling was completed (4,840m DD and 1,199m RC). The results of the lease-scale geochemical soil sampling programme continue to be assessed.

Democratic Republic of the Congo: During the six months ended 30 June 2017, exploration drilling and trenching took place at

Kombokolo-Rhino-Agbarabo, Sessenge-Sessenge Southwest, Aerodrome-Pamao-Megi, KCD-Kombokolo and Ikamva. Drilling from surface

and underground has shown potential for extensions of current underground reserves on the 3000 and 9000 up-plunge lodes.

Republic of Mali - RC drilling (2,460 m) was completed at Tambali West and Dogofile and DD (761 m) was completed at Tambali North,

SSP North and FN bc. In addition, a total of 1,195m of DD was conducted at FE3 and FE4 as part of the SSP to investigate the potential of the main shear below the pits that are earmarked for in-pit tailings disposal. A total of 1,351m of sterilisation drilling was conducted at FE4 to assess the suitability for in-pit tailings deposition for SSP.

In **Argentina**, drilling started at Cerro Vanguardia for the year. Most of the drilling meters were focused on extensions of ore zones and new targets. During the six months ended 30 June 2017, 4,370m were drilled in total within the Cerro Vanguardia tenements. The Claudia JV earn-in was concluded ahead of the one year anniversary. Other work was completed to support target generation included trenching and channel sampling programmes to refine drill targeting.

In **Brazil**, exploration continued at the Cuiaba, Lamego and Córrego do Sítio (CdS) production centers for AGABM with 47,115m drilled during first half of the year from the combined surface and underground drilling programmes. Targets included ore body extension at Cuiaba and CdS. Follow up infill drilling to support mine planning and Mineral Resource conversion was also completed.

At Serra Grande, 23,943m were drilled as part of the exploration and Mineral Resource conversion programmes. Drilling target generation activities included mapping and soil sampling programmes.

In **Colombia**, the Gramalote JV completed 3,816m of drilling in total. Part of the programme was designed to support site and infrastructure investigations. The saprolite infill drilling programme was completed to better define the thickness and gold mineralisation in the horizon. Drilling continued on targets within the JV regional tenements outside the main resource area. Work to update and refine the geological model progressed in the first half to support the pre-feasibility study and remains on track for completion by the end of 2017.

The Quebradona JV programme continued a drilling programme to support pre-feasibility study site investigation geotechnical and hydrology data collection. A total of 2,132m were drilled. All drilling has been concluded at this stage of the programme.

In **Australia**, at Sunrise Dam drilling targeted Vogue Deeps, north extensions to Cosmo and Cosmo East, Hammerhead and down dip extensions to Cosmo, Cosmo East and Dolly. Some of the holes drilled to target Vogue Deeps and Cosmo East down dip are within close proximity to Carey Shear zone, therefore some of these holes have been designed to pass through the shear and into the footwall. A total of 43,002m were drilled.

At Tropicana, during the period exploration drilling consisted of reverse circulation (RC), diamond core (DDH) and aircore (AC) drilling, for a total of 41,412m drilled. RC (19,807m) and DDH drilling (2,872m) programmes targeted Sanpan, Zebra, New Zebra, Hat-Trick, Springbok and Southern Mining Lease (ML) in first quarter and Angel Eyes, Beetlejuice, Crouching Tiger, Kamikaze, Little Wing, Springbok and Zebra in the second quarter.

For more details on work done during the half year, see the Exploration Update document on the company website:

www.anglogoldashanti.com.

MINERAL RESERVES AND RESOURCES STATEMENT

There have been no material changes as yet to the Mineral Resource and Ore Reserve estimates as disclosed in the 2016 Ore Reserve and Mineral Resource report. The process of estimating Mineral Resource and Ore Reserves is ongoing and only due for completion at the end of the year. However, the recently announced changes to the South African operations and the Paramo declaration in Colombia may well result in material changes. The impact of these is still being assessed.

OUTLOOK FOR THE FULL YEAR 2017

Guidance

Notes

Production (000oz)

3,600 3,750

- Obuasi in limited operations phase with no production anticipated in 2017. No provision for any unforeseen operational disruptions, power-related stoppages, or changes to asset portfolio and/or operating mines.

- Note that there is, as always, a strong negative impact expected in the first half of the year given the slow start-up in SA following the holiday break, and interruptions around the Easter break.

Costs

All-in sustaining costs (\$/oz)

1,050 1,100

Assumptions: ZAR13.20/\$, \$/A\$0.77,

BRL3.20/\$, AP16.75/\$; Brent \$48/bl

Total cash costs (\$/oz)

Production, overhead and cost estimates assume neither labour interruptions or power disruptions, nor changes to asset portfolio and/or

operating mines and have not been reviewed by our external auditors. Other unknown or unpredictable factors could also have material

adverse effects on our future results and no assurance can be given that any expectations expressed by AngloGold Ashanti will prove to

have been correct. Please refer to the Risk Factor section in AngloGold Ashanti's annual report on Form 20-F for the year ended

31 December 2016, filed with the United States Securities and Exchange Commission.

Independent auditor's review report on the condensed consolidated financial statements for the six months ended 30 June 2017

to the shareholders of AngloGold Ashanti Limited

We have reviewed the condensed consolidated financial statements of AngloGold Ashanti Limited (the company) contained in the accompanying interim report on pages 12 to 30, which comprise the accompanying condensed consolidated statement of financial position as at 30 June 2017, the condensed consolidated income statement, statement of comprehensive income, statement of changes in equity and statement of cash flows for the six months then ended, and selected explanatory notes.

Directors' responsibility for the condensed consolidated financial statements

The directors are responsible for the preparation and presentation of these condensed consolidated financial statements in accordance with the International Financial Reporting Standard, IAS 34 Interim Financial Reporting as issued by the International Accounting Standards Board (IASB), the SAICA Financial Reporting Guides, as issued by the Accounting Practices Committee and Financial Reporting Pronouncements as issued by the Financial Reporting Standards Council, and the requirements of the Companies Act of South Africa, and for such internal control as the directors determine is necessary to enable the preparation of condensed consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's responsibility

Our responsibility is to express a conclusion on these interim financial statements based on our review. We conducted our review in accordance with International Standard on Review Engagements (ISRE) 2410, Review of Interim Financial Information Performed by the Independent Auditor of the Entity. This standard requires us to conclude whether anything has come to our attention that causes us to believe that the interim financial statements are not prepared in all material respects in accordance with the applicable financial reporting framework. This standard also requires us to comply with relevant ethical requirements. A review of interim financial statements in accordance with ISRE 2410 is a limited assurance engagement. We perform procedures, primarily consisting of making enquiries of management and others within the entity, as appropriate, and applying analytical procedures and evaluating the evidence obtained.

The procedures performed in a review are substantially less than and differ in nature from those performed in an audit conducted in accordance with International Standards on Auditing. Accordingly, we do not express an audit opinion on these financial statements.

Conclusion

Based on our review, nothing has come to our attention that causes us to believe that the accompanying condensed consolidated financial statements of the company for the six months ended 30 June 2017 do not present fairly, in all material respects, in accordance with

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 6-K

International Financial Reporting Standard, IAS 34 Interim Financial Reporting as issued by the IASB, the SAICA Financial Reporting Guides as issued by the Accounting Practices Committee and Financial Reporting Pronouncements as issued by the Financial Reporting Standards Council and the requirements of the Companies Act of South Africa.

Notes

for the six months ended 30 June 2017

1

Basis of preparation

The financial statements in this report have been prepared in accordance with the historic cost convention except for certain financial

instruments which are stated at fair value. The group's accounting policies used in the preparation of these financial statements

are in terms of the JSE Listings Requirements and are consistent with those used in the annual financial statements for the year

ended 31 December 2016.

The financial statements of AngloGold Ashanti have been prepared in compliance with the framework concepts and the

measurement and recognition requirements of IFRS, IAS 34, IFRS as issued by the International Accounting Standards Board, the

South African Institute of Chartered Accountants Financial Reporting Guides as issued by the Accounting Practices Committee,

Financial Reporting Pronouncements as issued by the Financial Reporting Standards Council, JSE Listings Requirements and in

the manner required by the South African Companies Act, 2008 (as amended) for the preparation of financial information of the

group for the six months ended 30 June 2017. These financial statements should be read in conjunction with the company's audited

consolidated financial statements and the notes thereto as at and for the year ended 31 December 2016.

Based on materiality, certain comparatives have been aggregated.

Litigation claims - Class action

Occupational Diseases in Mines and Works Act (ODMWA) litigation - On 3 March 2011, in *Mankayi vs. AngloGold Ashanti*, the Constitutional

Court of South Africa held that section 35(1) of the Compensation for Occupational Injuries and Diseases Act, 1993 does not cover an "employee"

who qualifies for compensation in respect of "compensable diseases" under ODMWA. This judgement allows such qualifying employee to pursue

a civil claim for damages against the employer. Following the Constitutional Court decision, AngloGold Ashanti and members of the working

group (discussed below) have been subject to numerous claims relating to silicosis and other Occupational Lung Diseases (OLD), including

several potential class actions and individual claims.

In November 2014, Anglo American South Africa, AngloGold Ashanti, Gold Fields, Harmony Gold Mining Company and Sibanye Gold formed

an industry working group on OLD to address issues relating to compensation for OLD in the gold mining industry in South Africa. The working

group now also includes African Rainbow Minerals ("ARM"). The working group remains of the view that achieving a comprehensive solution

which is both fair to past, present and future employees, and sustainable for the sector, is preferable to protracted litigation. The working group

will continue with its efforts which have been ongoing for more than two years to find common ground with all

stakeholders, including

AngloGold Ashanti, along with other mining companies including Anglo American South Africa, ARM, Gold Fields, Harmony Gold Mining

Company, DRDGold, Randgold and Exploration Company, and Sibanye Gold, were served with a consolidated class action application on

21 August 2013. The companies do not believe that they are liable in respect of the claims brought, and they are defending these. They do,

however, believe that they should work together to seek a solution to this South African mining industry legacy issue.

5 Special items (continued)

On 13 May 2016, the High Court ordered, among other things: (1) the certification of two classes: (a) a silicosis class comprising current and former mine workers who have contracted silicosis and the dependents of mine workers who have died of silicosis; and (b) a tuberculosis class comprising current and former mine workers who have worked on the mines for a period of not less than two years and who have contracted pulmonary tuberculosis and the dependents of deceased mine workers who died of pulmonary tuberculosis; and (2) that the common law be developed to provide that, where a claimant commences suing for general damages and subsequently dies before close of pleadings, the claim for general damages will transmit to the estate of the deceased claimant. The progression of the classes certified will be done in two phases: (i) a determination of common issues, on an opt-out basis, and (ii) the hearing and determination of individualised issues, on an opt-in basis. In addition, costs were awarded in favour of the claimants. The High Court ruling did not represent a ruling on the merits of the cases brought by the Claimants. The amount of damages has not yet been quantified for any of the claimants in the Consolidated Class Application or for any other members of the classes. AngloGold Ashanti and the other respondents believed that the judgement addressed a number of highly complex and important issues, including a far-reaching amendment of the common law, that have not previously been considered by other courts in South Africa. The High Court itself found that the scope and magnitude of the proposed claims is unprecedented in South Africa and that the class action would address novel and complex issues of fact and law. The respondents applied for leave to appeal against the judgement because they believed that the court's ruling on some of these issues is incorrect and that another court may come to a different decision. On 24 June 2016, the South Gauteng High Court granted the mining companies leave to appeal against the finding amending the common law in respect of the transmissibility of general damages claims. It refused leave to appeal on the certification of silicosis and tuberculosis classes. On 15 July 2016, AngloGold Ashanti and the other respondents each filed petitions to the Supreme Court of Appeal for leave to appeal against the certification of the two separate classes for silicosis and tuberculosis. In an attempt to shorten any delay due to an appeal process, it is permissible to request that the appeals be dealt with on an expedited basis. On 21 September 2016, the Supreme Court of Appeal granted the respondents leave to appeal against all aspects of the class certification judgement of the South Gauteng High Court delivered in May 2016. The appeal hearing before the Supreme Court of Appeal is scheduled to be heard from 19 - 23 March 2018.

Provision raised

As a result of the progress made by the working group since 31 December 2016 on a variety of issues, management is now in a position to reliably estimate within an acceptable range the AngloGold Ashanti share of a possible settlement of the class action claims and related costs. As a result, AngloGold Ashanti has provided for this obligation in the Statement of Financial Position as at 30 June 2017 at a discounted amount of \$63m (undiscounted \$77m). The ultimate outcome of these negotiations and the court sanction

of the agreement

remains uncertain and accordingly the provision is subject to adjustment in the future.

58

(1)

Includes the group's attributable share of capital commitments relating to associates and joint ventures.

Liquidity and capital resources

To service the above capital commitments and other operational requirements, the group is dependent on existing cash resources,

cash generated from operations and borrowing facilities.

Cash generated from operations is subject to operational, market and other risks. Distributions from operations may be subject to

foreign investment, exchange control laws and regulations and the quantity of foreign exchange available in offshore countries. In

addition, distributions from joint ventures are subject to the relevant board approval.

The credit facilities and other finance arrangements contain financial covenants and other similar undertakings. To the extent that

external borrowings are required, the group's covenant performance indicates that existing financing facilities will be available to

meet the above commitments. To the extent that any of the financing facilities mature in the near future, the group believes that

sufficient measures are in place to ensure that these facilities can be refinanced.

14 Financial risk management activities

Borrowings

The rated bonds are carried at amortised cost and their fair values are their closing market values at the reporting date which results in the difference noted in the table below. The interest rate on the remaining borrowings is reset on a short-term floating rate basis and accordingly the carrying amount is considered to approximate the fair value.

Derivatives

The fair value of derivatives is estimated based on ruling market prices, volatilities, interest rates and credit risk and includes all

derivatives carried in the statement of financial position.

Embedded derivatives are included as derivatives on the statement of financial position.

The group uses the following hierarchy for determining and disclosing the fair value of financial instruments:

Level 1:

quoted prices (unadjusted) in active markets for identical assets or liabilities;

Level 2:

inputs other than quoted prices included in level 1 that are observable for the asset or liability, either directly (as prices)

or indirectly (derived from prices); and

Level 3:

inputs for the asset or liability that are not based on observable market data (unobservable inputs).

The following tables set out the group's financial assets and liabilities measured at fair value by level within the fair value hierarchy:

Environmental obligations

Pursuant to environmental regulations in the countries in which we operate, we are obligated to close our operations and rehabilitate

the lands which we mine in accordance with these regulations. As a consequence, AngloGold Ashanti is required in some

circumstances to provide either reclamation bonds issued by third party entities, establish independent trust funds or provide

guarantees issued by the operation, to the respective environmental protection agency or such other government department with

responsibility for environmental oversight in the respective country to cover the potential environmental rehabilitation obligation in

specified amounts.

In most cases, the environmental obligations will expire on completion of the rehabilitation although in some cases we are required

to potentially post bonds for events unknown that may arise after the rehabilitation has been completed.

In South Africa we have established a trust fund which has assets of ZAR 1.41bn and guarantees of ZAR 1.82bn issued by various

banks, for a current carrying value of the liability of ZAR 1.16bn. In Australia, since 2014, we have paid into a Mine Rehabilitation

Fund an amount of AUD \$3m for a current carrying value of the liability of AUD \$105.6m. At Iduapriem we have provided a bond

comprising of a cash component of \$9.8m with a further bond guarantee amounting to \$33.9m issued by Ecobank Ghana Limited

and Barclays Ghana Limited for a current carrying value of the liability of \$43.1m. At Obuasi we have provided a bond comprising

of a cash component of \$20.2m with a further bank guarantee amounting to \$30.0m issued by Nedbank Limited for a current carrying

value of the liability of \$216.9m. In some circumstances, we may be required to post further bonds in due course which will have a

consequential income statement charge for the fees charged by the providers of the reclamation bonds.

15 Contractual commitments and contingencies

AngloGold Ashanti's material contingent liabilities and assets at 30 June 2017 and 31 December 2016 are detailed below:

Litigation claims

(1)

Litigation - On 11 October 2011, AngloGold Ashanti (Ghana) Limited (AGAG) terminated Mining and Building Contractors

Limited's (MBC) underground development agreement, construction on bulkheads agreement and diamond drilling agreement

at Obuasi mine. The parties reached agreement on the terms of the separation and concluded a separation agreement on 8

November 2012. On 20 February 2014, AGAG was served with a writ issued by MBC claiming a total of \$97m. In December

2015, the proceedings were stayed in the High Court pending arbitration. In February 2016, MBC submitted the matter to

arbitration and the parties await the constitution of the tribunal.

(2)

Litigation - AGAG received a summons on 2 April 2013 from Abdul Waliyu and 152 others in which the plaintiffs allege that

they were or are residents of the Obuasi municipality or its suburbs and that their health has been adversely affected by

emission and/or other environmental impacts arising in connection with the current and/or historical operations of the

Pompora

Treatment Plant (PTP),

which was decommissioned in 2000. The plaintiff's alleged injuries included respiratory infections, skin diseases and certain cancers. The plaintiffs subsequently did not timely file their application for directions, but AGAG intends

to allow some time to pass prior to applying to have the matter struck out for want of prosecution. On 24 February 2014,

executive members of the PTP (AGAG) Smoke Effect Association (PASEA), sued AGAG by themselves and on behalf of their

members (undisclosed number) on grounds similar to those discussed above, as well as economic hardships as a result of

constant failure of their crops. This matter has been adjourned indefinitely. In view of the limitation of current information for

the accurate estimation of a liability, no reliable estimate can be made for

Tax claims

(3) Tax disputes - In November 2007, the Departamento Nacional de Produção Mineral (DNPM), a Brazilian federal mining

authority, issued a tax assessment against AngloGold Ashanti Brazil Mineração Ltda (AGABM) relating to the calculation and

payment by AABM of the financial contribution on mining exploitation in the period from 1991 to 2006. The assessment

(possible amount) is \$9m (2016: \$9m). Anglogold Ashanti Limited's subsidiaries in Brazil are involved in various other disputes

with tax authorities. These disputes involve federal tax assessments including income tax, royalties, social contributions and

annual property tax. The possible amount involved is approximately \$10m (2016: \$15m). Management is of the opinion that

these taxes are not payable.

(4)

Tax dispute - In January 2013, AngloGold Ashanti Colombia S.A. (AGAC) received notice from the Colombian Tax Office

(DIAN

) that is disagreed with the company's tax treatment of certain items in the 2010 and 2011 income and equity tax returns.

On 23 October 2013, AGAC received the official assessments from the DIAN which established that an estimated additional

tax of \$21m (2016: \$21m) will be payable if the tax returns are amended. Penalties and interest for the additional taxes are

expected to be \$121m (2016: \$120m). The company believes that the DIAN has applied the tax legislation incorrectly. AGAC

subsequently challenged the

DIAN's ruling by filing lawsuits in March 2015 and April 2015 before the Administrative Tribunal

of Cundinamarca (the trial court for tax litigation). Closing arguments on the tax disputes were presented in February and June

2017 and judgement is pending.

(5)

Tax dispute - On 12 July 2013, Cerro Vanguardia S.A. (CVSA) received a notification from the Argentina Tax Authority (AFIP)

requesting corrections to the 2007, 2008 and 2009 income tax returns of about \$7m (2016: \$7m) relating to the non-deduction

of tax losses previously claimed on hedge contracts. The AFIP is of the view that the financial derivatives could not be

considered as hedge contracts, as hedge contract losses could only be offset against gains derived from the same kind of hedging contracts. Penalties and interest on the disputed amounts are estimated at a further \$22m (2016: \$22m). CVSA and AFIP have corresponded on this issue over the past several years and while management is of the opinion that the taxes are not payable, the government continues to assert its position regarding the use of the financial derivatives. CVSA filed an appeal with the Tax Court on 19 June 2015, and the matter is proceeding.

Other

(6)

Groundwater pollution - AngloGold Ashanti has identified groundwater contamination plumes at certain of its operations, which have occurred primarily as a result of seepage from mine residue stockpiles. Numerous scientific, technical and legal studies have been undertaken to assist in determining the magnitude of the contamination and to find sustainable remediation solutions. The group has instituted processes to reduce future potential seepage and it has been demonstrated that Monitored Natural Attenuation (MNA) by the existing environment will contribute to improvements in some instances. Furthermore, literature reviews, field trials and base line modelling techniques suggest, but have not yet proven, that the use of phyto-technologies can address the soil and groundwater contamination. Subject to the completion of trials and the technology being a proven remediation technique, no reliable estimate can be made for the obligation.

(7) Deep groundwater pollution - The group has identified potential water ingress and future pollution risk posed by deep groundwater in certain underground mines in Africa. Various studies have been undertaken by AngloGold Ashanti since 1999 to understand this potential risk. In South Africa, due to the interconnected nature of mining operations, any proposed solution needs to be a combined one supported by all the mines located in these gold fields. As a result, the Mineral and Petroleum Resources Development Act (MPRDA) requires that the affected mining companies develop a Regional Mine Closure Strategy to be approved by the Department of Mineral Resources. In view of the limitation of current information for the accurate estimation of a liability, no reliable estimate can be made for the obligation.

16 Borrowings

AngloGold

Ashanti's borrowings are interest bearing.

17 Impact of the adoption of IFRS 15 Revenue from Contracts with Customers

IFRS 15 *Revenue from Contracts with Customers* (IFRS 15) was issued by the International Accounting Standards Board (IASB)

during May 2014. AngloGold Ashanti is mandatorily required to apply IFRS 15 for annual reporting periods beginning on or after

1 January 2018.

Management has assessed the potential impact of IFRS 15 on the financial statements of the group and concluded that the group

does not sell product based on multiple-element arrangements and it does not sell product on a provisional or variable pricing

basis and as such the new standard does not have a significant impact on the timing or amount of the group's revenue recognition.

The adoption of IFRS 15 will result in the recognition of by-product revenue in Revenue from product sales. Revenue from product

sales includes Gold Income and by-product revenue. This change in classification results in a consequential increase in costs of

sales, and therefore will not have an impact on previously reported Gross profit.

AngloGold Ashanti intends to apply IFRS 15 retrospectively to each prior reporting period presented in accordance with IAS 8

Accounting Policies, Changes in Accounting Estimates and Errors.

18 Announcements

AngloGold Ashanti to restructure South African Operations to ensure their viability AngloGold Ashanti has made the difficult

decision to begin a consultation process with employees in terms of section 189 and 189A of the Labour Relations Act, with respect

to restructuring certain of its South African business units. This follows a review of the options to safely turnaround the performance

of these loss-making operations. While all efforts will be made to limit the impact on employment to the greatest extent possible, this

28,000 people, including contractors. In order to safeguard the long-term sustainability of its South African business, AngloGold

Ashanti is considering the following actions, subject to the outcomes of the consultation process:

- Place on care and maintenance the Kopanang mine, in the Vaal River region, and the Savuka section of the Tau Tona mine,

in the West Wits region. Savuka mine has been in operation for 59 years, and has already been extended 10 years beyond

its natural life. Kopanang mine produced its first gold in 1981, 36 years ago.

- Evaluate the feasibility of integrating elements of the 60-year old Tau Tona mine into the neighbouring Mponeng mine.

Legislative changes in Tanzania - On 30 June 2017, AngloGold Ashanti announced that Tanzania's parliament published draft

legislation amending the legal framework of its extractive industry, while also passing a Bill that levies a 1% clearing fee' on mineral

exports from 1 July 2017. Subsequent to 30 June 2017, the Republic of Tanzania's parliament enacted and published, in the Country's

official Government Gazette, The Natural Wealth and Resources (Permanent Sovereignty) Act, No. 5 of 2017, The Natural Wealth

and Resources Contracts (Review and re-negotiation of unconscionable terms) Act, No. 6 of 2017 and The Written Laws

(Miscellaneous amendments) Act, no.7 of 2017. AngloGold Ashanti is in the process to analyse the impact of these laws, in the

context of its Mine Development Agreement.

On 13 July 2013, AngloGold Ashanti indicated that it is seeking a constructive dialogue with the Government of Tanzania, and its

agencies, to gain assurances that Geita Mine will not be affected by these legal and fiscal changes. In the circumstances, the group,

however, had no choice but to take the precautionary step of safeguarding its interests under the Mine Development Agreement, by

commencing arbitration proceedings under the rules of the United Nations Commission on International Trade Law, as clearly provided

for in the Mine Development Agreement.

Non-GAAP disclosure

From time to time AngloGold Ashanti Limited may publicly disclose certain "Non-GAAP" financial measures in the course of its financial

presentations, earnings releases, earnings conference calls and otherwise. Set out below are measures extracted from financial information regularly

presented to the Chief Operating Decision Maker (Executive Committee).

The group uses certain Non-GAAP performance measures and ratios in managing the business and may provide users of this financial information

with additional meaningful comparisons between current results and results in prior operating periods. Non-GAAP financial measures should be

viewed in addition to, and not as an alternative to, the reported operating results or any other measure of performance prepared in accordance with

IFRS. In addition, the presentation of these measures may not be comparable to similarly titled measures that other companies use.

Forward-looking
statements

Certain statements contained in this document, other than statements of historical fact, including, without limitation, those concerning the economic outlook for the gold mining industry, expectations regarding gold prices, production, total cash costs, all-in sustaining costs, all-in costs, cost savings and other operating results, productivity improvements, growth prospects and outlook of AngloGold Ashanti's operations, individually or in the aggregate, including the achievement of project milestones, commencement and completion of commercial operations of certain of AngloGold Ashanti's exploration and production projects and the completion of acquisitions, dispositions or joint venture transactions, AngloGold Ashanti's liquidity and capital resources capital expenditures and the outcome and consequence of any potential or pending litigation or regulatory proceedings or environmental health and safety issues, are forward-looking statements regarding AngloGold Ashanti's operations, economic performance and financial condition. These forward-looking statements or forecasts involve known and unknown risks, uncertainties and other factors that may cause AngloGold Ashanti's actual results, performance or achievements to differ materially from the anticipated results, performance or achievements expressed or implied in these forward-looking statements. Although AngloGold Ashanti believes that the expectations reflected in such forward-looking statements are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of, among other factors, changes in economic, social and political and market conditions, the success of business and operating initiatives, changes in the regulatory environment and other government actions, including environmental approvals, fluctuations in gold prices and exchange rates, the outcome of pending or future litigation proceedings, and business and operational risk management. For a discussion of such risk factors, referred to AngloGold Ashanti's annual reports on Form 20-F filed with the United States Securities and Exchange Commission. These factors are not necessarily all of the important factors that could cause AngloGold Ashanti's actual results to differ materially from those expressed in any forward-looking statements. Other unknown or unpredictable factors could also have material adverse effects on future results. Consequently, readers are cautioned not to place undue reliance on forward-looking statements. AngloGold Ashanti undertakes no obligation to update publicly or release any revisions to these forward-looking statements to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events, except to the extent required by applicable law. All subsequent written or oral forward-looking statements attributable to AngloGold Ashanti or any person acting on its behalf are qualified by the cautionary statements herein.

Non-GAAP financial measures

This communication may contain certain "Non-GAAP" financial measures. AngloGold Ashanti utilises certain Non-GAAP performance measures and ratios in managing its business. Non-GAAP financial measures should be viewed in addition to, and not as an alternative for, the reported operating results or cash flow from operations or any other measures of performance prepared in accordance with IFRS. In addition, the presentation of these measures may not be comparable to similarly titled measures other companies may use. AngloGold Ashanti posts information that is important to investors on the main page of its website at www.anglogoldashanti.com.
