GOL LINHAS AÉREAS INTELIGENTES S.A.
(Exact name of registrant as specified in its charter)

GOL INTELLIGENT AIRLINES INC.
(Translation of Registrant's name into English)

R. Tamoios, 246
Jd. Aeroporto
04630-000 São Paulo, São Paulo
Federative Republic of Brazil
(Address of Registrant's principal executive offices)

Indicate by check mark whether the registrant files or will file
annual reports under cover Form 20-F or Form 40-F.

Form 20-F Form 40-F

Indicate by check mark whether the registrant by furnishing the
information contained in this Form is also thereby furnishing the
information to the Commission pursuant to Rule 12g3-2(b) under
the Securities Exchange Act of 1934.

Yes No

If "Yes" is marked, indicated below the file number assigned to the
registrant in connection with Rule 12g3-2(b):

GOL Records Load Factor of 72.4%, with Demand Growth of 4.5%

Consistent growth in demand and load factor in line with

Company's 2011 growth strategy

São Paulo, March 14, 2011 - GOL Linhas Aéreas Inteligentes S.A. (BM&FBovespa: GOLL4 and NYSE: GOL) (S&P/Fitch:BB-/BB-, Moody's: Ba3), the largest low-cost and low-fare airline in Latin America, recorded a 4.5% year-on-year increase in demand on its total route network in February, accompanied by a load factor of 71.2%.

Demand

Demand on the domestic market grew by 4.4% over February 2010, despite the fact that the Carnival holiday was in the first week of March in 2011 rather than at the beginning of February, as traditionally occurs. This resulted in an early end to Brazil's summer vacation high season, making February less seasonal than the same period in 2010. On the other hand, March will benefit from the creation of a small holiday period during the first week, fueling air traffic in this period. In comparison with the previous month, demand fell by 18.8% (10.1% down in terms of daily demand) due to: (i) January's seasonality (summer high season); (ii) the reduced number of operational days between the two months (28 days in February versus 31 in January); and (iii) the absence of Carnival, making February less seasonal in comparison with last year.

International demand climbed by 5.9% year-on-year, thanks to the economic stability in Latin America, in addition to the following factors: (i) the launch of new international destinations between the two periods (Punta Cana, in the Dominican Republic, Bridgetown, in Barbados, and Buenos Aires/Aeroparque, in Argentina); (ii) the intensification of international operations with partner airlines through code-share agreements; and (iii) the depreciation of the Real against the U.S. dollar, favoring international tourism. In comparison with the month before, demand fell by 17.8%, also mainly due to January's seasonality and the lower number of operational days in comparison with January and December. Average daily demand recorded a decline of only 9.0%.

Operating Data	February 2011 (*)(**)	February 2010 (*)(**)	Var.% (YoY)	January 2011(*)(**)	Var.% (MoM)

(*) February 2011 preliminary figures; February 2010 management figures adjusted to comply with the new National Civil Aviation Agency (ANAC) methodology; January 2010 ANAC figures.

(**)Considering the new calculation methodology introduced by ANAC's 2010 DCA Manual.

Supply

Supply increased by 3.8% year-on-year, mainly due to: (i) increased productivity (more than 13.2 block hours/day in February/11 versus approximately 12.9 in February 2010); (ii) the replacement of B737-300s with B737-800s, which have more seats; and (iii) the reactivation of B767 aircraft for international charter flights. In comparison with the previous month, supply fell by 13.6% due to the end of the high season in January and the reduced number of operational days (28 in February versus 31 in January). In daily average terms, supply fell by only 4.4%.

For yet another consecutive month, GOL continued to implement its responsible capacity management strategy, with upturns of 3.8% in supply and 4.5% in demand. The aim is to increase supply by improving productivity without the need to add more aircraft. As a result, the Company maximizes the use of its assets, thereby boosting profitability.

Load Factor and Yield

GOL's total load factor came to 71.2% in February (0.5 p.p. up year-on-year and 4.4 p.p. down on the month before) and yield exceeded 19.00 cents (R\$).

(1) Available seat kilometers (ASK) is the sum of the products obtained by multiplying the number of seats available on each flight stage by the distance of the average flight stage.

(2) Revenue passenger kilometers (RPK) is the sum of the products obtained by multiplying the number of revenue passengers carried on each flight stage by the average stage distance.

(3) Load factor is the percentage of aircraft seating capacity effectively used, which is calculated by dividing the number of passenger-kilometers flown by the number of seat-kilometers available.
