SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

FORM 10 K

(Mark One)

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2013

OR

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

Commission File No. 1-4347

ROGERS CORPORATION

(Exact name of Registrant as specified in its charter)

Massachusetts

(State or other jurisdiction of
incorporation or organization)

06 0513860

(I. R. S. Employer
Identification No.)

P.O. Box 188, One Technology Drive, Rogers, Connecticut 06263-0188 (Address of principal executive offices)

Registrant's telephone number, including area code: (860) 774-9605

Securities registered pursuant to Section 12(b) of the Act:

Title of Each Class	Name of Each Exchange on Which Registered
Common Stock, \$1 Par Value	New York Stock Exchange
Rights to Purchase Capital Stock	New York Stock Exchange

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§ 229.405 of this chapter) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form

10-K. "

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer", "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company
(Do not check if a smaller reporting company)

Indicate by checkmark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act) Yes No

The aggregate market value of the voting common equity held by non-affiliates as of June 30, 2013, the last business day of the registrant's most recently completed second fiscal quarter, was approximately \$801,437,215. Rogers has no non-voting common equity.

The number of shares outstanding of common stock as of February 4, 2014 was 17,882,696.

Documents Incorporated by Reference:

Portions of Rogers' Definitive Proxy Statement for its 2014 Annual Meeting of Shareholders, currently scheduled for May 9, 2014, are incorporated by reference into Part III of this Form 10-K.

Part I

Item 1. Business

Industry

Rogers Corporation, founded in 1832, is one of the oldest publicly traded and continuously operated companies in the United States. We have adapted our products over the 182 years of our history to meet the changing needs of the various markets we have served and currently serve. Today we predominantly supply a wide range of specialty materials products across a wide range of end markets, including portable communications, communications infrastructure, consumer electronics, mass transit, automotive, defense, and clean technology.

Our continued focus is on three megatrends that we believe will fuel the future growth of the Company - continued growth of the internet, expansion of mass transit, and investment in clean technology. These trends and their related markets all require materials that perform to the highest standards, a characteristic which has been a key strength of our products over the years. Within the industries impacted by these megatrends, our products are sold into a variety of markets, including high technology applications such as cellular base stations and antennae, hand held wireless devices, energy efficient motor drives, wind and solar energy applications, and electric and hybrid-electric vehicles. We continue to focus on business opportunities around the globe, as evidenced by our strong presence in the three major geographic regions we serve - North America, Europe, and Asia. We are also focused on growing our business both organically, by expanding our current product portfolio and market presence, as well as through external ventures, such as acquisitions, strategic partnerships and investments in technology.

As used herein, the “Company,” “Registrant,” “Rogers,” “we,” “our,” “us” and similar terms include Rogers Corporation and its subsidiaries, unless the context indicates otherwise.

Business Segments & Products

Our reporting structure is comprised of the following operating segments: High Performance Foams (HPF), Printed Circuit Materials (PCM), Power Electronics Solutions (PES) and the Other reportable segment. In the fourth quarter of 2013, we determined that a realignment of our segment structure was appropriate in order to present our financial results in a manner consistent with how management operates the business. Our previous reporting structure was comprised of the following operating segments: High Performance Foams, Printed Circuit Materials, Curamik Electronic Solutions and Power Distribution Systems and the Other reportable segment.

In the new structure, we will present three operating segments - High Performance Foams, Printed Circuit Materials, and Power Electronics Solutions. During 2013, the management of the Curamik Electronic Solutions and Power Distribution Systems operations was combined under one segment management team and the former operating segments now meet the definition of product lines, as the management team has full cross functional and regional responsibility over all aspects of these product lines. Information is reported to the Chief Operating Decision Maker (the President and Chief Executive Officer of Rogers) at the Power Electronic Solutions operating segment level. We believe this structure aligns our external reporting presentation with how we currently manage and view our business internally. All prior periods herein have been recast to reflect this change.

High Performance Foams

The High Performance Foams operating segment includes polyurethane and silicone foam products manufactured in roll stock, sheet, and molded formats. These foams have characteristics that offer functional advantages in many market applications which serve to differentiate Rogers' products from other commonly available materials.

High Performance Foams products are sold globally to converters, fabricators, distributors and original equipment manufacturers (OEMs) for use in general industrial applications, portable communications, consumer goods, transportation, printing applications and other markets. Trade names for our High Performance Foams include: PORON® urethane foams used for making high performance gaskets and seals in vehicles, portable communications devices, computers and peripherals; PORON® cushion insole materials for footwear and related products; PORON® healthcare and medical materials for body cushioning and orthotic appliances; R/bak® compressible printing plate backing and mounting products for cushioning flexographic plates for printing on packaging materials; PORON® and XRD® for high impact cushioning protection; BISCO® silicone foams, solids, sponge and extrusion products for flame retardant gaskets, seals and cushioning applications in communications infrastructure equipment,

aircraft, trains, cars and trucks, and for shielding extreme temperature or flame; and eSORBA® urethane foams used in portable communications, entertainment devices and other industrial applications.

We have two 50% owned joint ventures that extend and complement our worldwide business in High Performance Foams. Rogers INOAC Corporation (RIC), a joint venture with Japan-based INOAC Corporation, manufactures high performance polyurethane foam materials in Mie and Taketoyo, Japan to predominantly serve the Japanese and Taiwanese markets. Rogers INOAC Suzhou Corporation (RIS) was established in 2004 with INOAC Corporation and provides polyurethane foam materials primarily to the Asian marketplace.

Printed Circuit Materials

The Printed Circuit Materials operating segment includes printed circuit board laminate products for high frequency, high performance applications. These products have characteristics that offer performance and other functional advantages in many market applications, and serve to differentiate our products from other commonly available materials. These products are sold principally to independent and captive printed circuit board fabricators that convert our laminates to custom printed circuits.

The polymer-based dielectric layers of our circuit board laminates are proprietary materials that provide highly specialized electrical and mechanical properties. Trade names for our printed circuit board materials include RO3000®, RO4000®, RT/duroid®, ULTRALAM®, RO2800® and TMM® laminates. All of these laminates are used for making circuitry that receive, transmit, and process high frequency communications signals, yet each laminate has varying properties that address specific needs and applications within the communications market. High frequency circuits are used in the equipment and devices that comprise wireless communications systems, including cellular communications, digital cellular communications, paging, direct broadcast television, global positioning, mobile radio communications, and radar for both aviation and automotive applications.

Power Electronics Solutions

The Power Electronics Solutions operating segment is comprised of direct bond copper (DBC) ceramic substrate products and RO-LINX® power distribution products. We believe that our advanced, customized components enable the performance and reliability of today's growing array of power electronic devices and serve to increase the efficiency of applications by managing heat and ensuring the reliability of these critical devices used in converting raw energy into controlled and regulated power that can be used and managed.

Trade names for our Power Electronics Solutions products include curamik® ceramic substrates and RO-LINX® products. Curamik® ceramic substrates are used in the design of intelligent power management devices, such as insulated gate bipolar transistor (IGBT) modules, which enable a wide range of products including highly efficient industrial motor drives, wind and solar converters and electric and hybrid electric vehicle drive systems. RO-LINX® products are used in high power electrical inverter and converter systems for use in mass transit (e.g. high speed trains); clean technology applications (e.g. wind turbines, solar farms and electric vehicles) and variable frequency drives for high to mid power applications.

Other

The Other reportable segment consists of elastomer components, floats and inverter distribution activities. Elastomer components are sold to OEMs for applications in ground transportation, office equipment, consumer and other markets. Trade names for our elastomer components include: NITROPHYL® floats for level sensing in fuel tanks, motors, and storage tanks and ENDUR® elastomer rollers and belts for document handling in copiers, printers, mail sorting machines and automated teller machines. Inverters are sold primarily to OEMs and fabricators that in turn sell to various other third parties primarily serving the portable communications and automotive markets.

This segment previously included the results of the Composite Materials operating segment, which qualified as a discontinued operation in the fourth quarter of 2012 when we shut down production of non-woven composite materials. This segment also included the results of the Thermal Management Solutions operating segment, which qualified as a discontinued operation in 2011. All results have been recast to exclude these segments from consolidated results or continuing operations.

Sales and Marketing

Most of our products are sold through direct sales channels positioned near major concentrations of our customers throughout North America, Europe and Asia. Our products were sold to over 3,000 customers worldwide in 2013. Our largest individual customer represented approximately 4% of Rogers' total sales for 2013. Although the loss of all of the sales made to any one of our larger customers would require a period of adjustment during which the results of a particular operating segment would be adversely impacted, we believe that such adjustments could be successfully made over a period of time due to the diversity of our customer base. We believe that our business relationships with major customers in our key markets are favorable, and that we are

in a good position to respond promptly to variations in customer requirements and technology trends. However, the possibility exists of losing all of the business of any major customer in any product line.

We market our full range of products throughout the world. Almost all of our sales are facilitated through our own worldwide sales force, with a small percentage facilitated through independent agents and distributors.

Competition

Our operating segments - HPF, PCM and PES - all participate in industries that are characterized by strong global competition. This competition is comprised not only of those companies that make directly competing materials, but also those companies that make comparable and, therefore, potentially substitutable materials. Competition typically emanates from substantially larger, multinational manufacturers that often have greater financial resources than we do, as well as smaller regional producers with lower overhead costs and profit requirements. This latter type of low cost competitor is particularly prevalent in Asia.

Our overall strategy across our operating segments is to offer highly regarded, technologically advanced products that are price competitive in relation to value and to link our product offerings with superior market knowledge, technical know-how, and customer service. Further, we believe that in order to provide outstanding customer support we must be geographically close to our customers in order to provide local service, support and distribution, which we achieve through our manufacturing facilities in the U.S., Europe and Asia, and our various sales offices around the globe. We believe this serves to differentiate our products and services and provides us a competitive advantage. We further believe that our relative position is dependent on our ability to maintain our technological advantage and the highest levels of design and customer service support; however, there is no assurance that we will be technologically competitive in the future, or that we will continue to develop new products that are technologically competitive.

High Performance Foams

The High Performance Foams operating segment offers products that we believe hold leadership positions in most of the markets it serves, including portable communications, consumer electronics and transportation. We have a strong market presence worldwide, particularly in North America and Asia. Our competition is comprised of companies from around the globe, including large multinational companies, as well as small regional companies that are particularly prevalent in Asia. In these areas, we typically compete on performance, quality and service, and we focus on protecting our intellectual property, particularly in regions where intellectual property laws are more commonly violated and enforcement efforts are less predictable. We also strive to continuously differentiate our product offerings, as commoditization of certain products is always a risk.

Printed Circuit Materials

The Printed Circuit Materials operating segment offers products that we believe are leaders in most of the markets they serve, including communication infrastructure, consumer electronics, automotive and defense. A key strategy in this segment is to continue to develop and produce products that are technology leaders in the markets for which they are targeted, particularly those in which performance requirements are constantly increasing, such as in the wireless infrastructure market where demand for data transmission capacities is continuously growing. This segment has a strong worldwide presence, particularly in North America, Europe and Asia, and has manufacturing capabilities in all three regions. It faces competition in each of these locations from a wide variety of companies, from very large multinational manufacturers to much smaller, regional companies. This segment must compete on quality, price and service, and must address the continual threat of commoditization, particularly with respect to products that have matured in their life cycle.

Power Electronics Solutions

Our Power Electronics Solutions operating segment offers products that we believe are leaders in most of the markets it serves, including highly efficient industrial motor drives, wind and solar converters, electric and hybrid electric vehicle drive systems, and mass transit. This operating segment has a strong presence in Asia and Europe. Our competition consists mainly of European companies, with some competition in the U.S., and a growing competitive presence in Asia. This segment competes on quality and service, as well as on pricing.

Research and Development

Research and development activities constitute an important and vital part of our overall business strategy. Our overall focus is typically on niche segments where we can differentiate our products from those of our competitors through technological advantage. The markets we serve are typically characterized by rapid technological changes and advances. Accordingly, the success of our strategy is in part dependent on our ability to develop market-leading products, which is primarily driven by efforts in research

and development. We are focused on identifying technologies and innovations related to both our current product portfolio as well as other, long term, initiatives targeted further diversifying our business.

As part of our long-term strategy, in July 2013, Rogers and Northeastern University announced plans to establish the Rogers Innovation Center at Northeastern's George J. Kostas Research Institute for Homeland Security in Burlington, Massachusetts. The partnership will allow Rogers and Northeastern to leverage their complementary research and development initiatives in advanced materials with a focus on the earliest stages of technical and commercial development of new high-tech materials solutions in close alignment with market needs. The Rogers Innovation Center is scheduled to be in operation in early 2014.

Patents and Other Intellectual Property Rights

We have many domestic and foreign patents and licenses and have additional patent applications on file related to all operating segments. These patents and licenses vary in duration and provide some protection from competition. In some cases, the patents result in license royalties. We have been awarded, have filed applications for, or have been licensed under numerous patents in the U.S. and other countries.

While our patents provide some advantage and protection, we believe that a large part of our competitive position and future success is largely determined by such factors as the innovative skills, systems and process knowledge, and technological expertise of our personnel; the range and success of new products we develop; and our customer service and support. It is our policy to defend our patents when we determine it is in our best interests and the best interests of our shareholders to do so. However, there can be no assurance concerning the degree of protection afforded by these patents or the likelihood that pending patents will be issued.

We also own a number of registered and unregistered trademarks and have acquired certain confidential and proprietary technology that we believe to be of importance to our business. Overall, we believe that our patents provide an important competitive advantage in many of our businesses; however, in general, no single patent or group of patents is in itself essential to our business as a whole or to any of our operating segments.

Environment

The nature and scope of our business brings us in regular contact with the general public and a variety of businesses and government agencies. Such activities inherently subject us to the possibility of litigation related to environmental matters, which is defended and handled in the ordinary course of business. We have established accruals for matters for which management considers a loss to be probable and reasonably estimable. We do not believe that the outcome of any of these environmental matters will have a material adverse effect on our results of operations, financial position or cash flows, nor have we had any material recurring costs or capital expenditures relating to environmental matters, except as disclosed in Item 3 "Legal Proceedings" and Note 15 to the Consolidated Financial Statements of this Form 10-K. However, there can be no assurances that the ultimate liability concerning these matters will not have a material adverse effect on us.

Raw Materials

We are required to purchase a wide variety of raw materials in order to manufacture our various products and materials. Some of these raw materials are available through limited sources. If the continuous supply of raw materials were interrupted, our production could be negatively impacted. When this has occurred in the past, we have typically purchased sufficient quantities of the particular raw material in advance to sustain production until alternative materials and production processes could be qualified with customers. We believe that similar responses could mitigate potential raw material availability issues in the future; however, this strategy may not work in all cases. As

such, we would have to work closely with our customers and suppliers to mitigate the impact of any raw material shortages on our business, but such shortages could have a material negative impact on our businesses under certain circumstances.

Seasonality

In our opinion, there is no material concentration of products or markets within the business that are seasonal in nature, except for some minor seasonality for those products used in cellular telephones due to the annual new model launch timetable, which can vary slightly from year to year in terms of timing and impact.

Employees

As of December 31, 2013, we employed approximately 2,500 employees.

Backlog

Our backlog of firm orders was \$50.5 million at December 31, 2013, as compared to \$43.3 million at December 31, 2012. The increase at the end of 2013 was primarily related to Power Electronics Solutions and Printed Circuit Materials, which experienced an increase in backlog of \$3.6 million and \$3.7 million, respectively, at December 31, 2013 as compared to December 31, 2012.

Edgar Filing: ROGERS CORP - Form 10-K

Executive Officers

Our executive officers as of February 24, 2014 are as follows:

Name	Age	Present Position	Year Elected to Present Position	Other Positions Held During 2009-2013
Bruce D. Hoechner	54	President and Chief Executive Officer (CEO)	2011	President, Asia Pacific Region, Dow Advanced Materials Division, Rohm and Haas Company from 2009 to September 2011; Corporate Vice President, General Manager of Rohm & Haas Coatings Asia Pacific from 2007 to 2009
Robert C. Daigle	50	Senior Vice President and Chief Technology Officer	2009	Vice President, Research and Development and Chief Technology Officer from October 2003 to June 2009
Gary M. Glandon	55	Vice President and Chief Human Resources Officer	2012	Chief Human Resources Officer, Solutia from October 2010- July 2012; Chief Human Resources Officer, Energy Conversion Devices Inc. from July 2009- October 2010; Chief People Officer, Insight Ent. from February 2005- April 2009.
Debra J. Granger	54	Vice President, Corporate Compliance and Controls	2007	
Jeffrey M. Grudzien	52	Vice President, Advanced Circuit Materials Division	2012	Vice President, Sales and Marketing September 2007 to February 2012
Dennis M. Loughran	56	Vice President, Finance and Chief Financial Officer, Principal Financial Officer	2006	
Terrence W. Mahoney	66	Vice President and General Counsel	2009	Counsel, McDermott Will & Emery LLP from July 2008 to July 2009
Paul B. Middleton	46	Director of Finance – Treasury Operations, New Business Development and Corporate Treasurer	2010	Treasurer from July 2009 to April 2010; Principal Accounting Officer from August 2007 to July 2009
Ronald J. Pelletier	40	Corporate Controller and Principal Accounting Officer; Director of	2013	Corporate Controller and Principal Accounting Officer from July 2009 to August 2013; Corporate Controller from

Available Information

We make available on our website (<http://www.rogerscorp.com>), or through a link posted on our website, free of charge, our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, reports filed pursuant to Section 16 and amendments to those reports filed pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934 (Exchange Act) as soon as reasonably practicable after we electronically file such material with, or furnish it to, the Securities and Exchange Commission (SEC). In addition, the SEC maintains an internet site that contains these reports, proxy and information statements, and other information regarding issuers that file electronically with the SEC (<http://www.sec.gov>).

We also make available on our website, in a printable format, the charters for our Board of Directors committees, including the Audit Committee, Compensation and Organization Committee, and Nominating and Governance Committee, in addition to our Corporate Governance Guidelines, Bylaws, Code of Business Conduct and Ethics Policy, Related Party Transactions Policy and Compensation Recovery Policy. Our website is not incorporated into or a part of this Form 10-K.

Item 1A. Risk Factors

Our business, financial condition and results of operations are subject to various risks, including those discussed below, which may affect the value of our stock. The risks discussed below are those that we believe are currently the most significant, although additional risks not presently known to us or that we currently deem less significant may also impact our business, financial condition and results of operations, perhaps materially.

The global credit and financial markets, despite recently demonstrating increased stability, could experience additional disruption, which could materially and adversely affect our business and results of operations.

Conditions in the global credit and financial markets continue to be uncertain and there can be no assurances that there will not be future deterioration in credit and financial markets and in confidence in overall economic conditions. These economic uncertainties affect businesses such as ours in a number of ways, making it difficult to accurately forecast and plan our future business activities. Adverse global economic conditions in our markets will likely negatively impact our business, which could result in the following conditions, among others:

- Reduced demand for our products;
- Increased price competition for our products;
- Increased credit or other financial difficulties at our suppliers that could result in delays in their ability to supply us with necessary raw materials, components or finished products;
- Increased risk of excess and obsolete inventories;
- Increased risk of the collectability of cash from our customers;
- Increased risk in potential reserves for doubtful accounts and write-offs of accounts receivable; and
- Higher operating costs as a percentage of revenues.

Continued or additional volatility in the global credit and financial markets could also have a significant impact on our ability to generate returns on our investment portfolio, our ability to obtain financing, and consequently, our ability to further diversify our business through strategic acquisitions or other alliances (an important component of our long-term growth strategy), and our ability to obtain and hold insurance, among other things. Our investments and certain other assets are impacted by market conditions, including conditions that affect interest rates and the liquidity and creditworthiness of the banks and other intermediaries through which we hold investments, and any decrease in their or our ability to liquidate our investments could negatively affect our financial position.

Our future revenue, gross margins, operating results and net income are difficult to predict and may materially fluctuate.

Our future revenue, gross margins, operating results and net income are difficult to predict and may be materially affected by a number of factors, including:

- the effects of adverse economic conditions in the U.S. and international markets;
- changes in customer demand for our products and for end products that incorporate our materials;
- loss of or significant declines in sales to key customers;
- the timing of new product announcements or introductions by us, our customers, or our competitors;
- competitive pricing pressures;
- fluctuations in manufacturing yields, adequate availability of copper and other raw materials, and manufacturing, assembly and testing capacity;
- significant declines in backlog;
- the timing, delay or cancellation of significant customer orders and our ability to manage inventory;
- changes in geographic, product, or customer mix;

- the effects of the expiration of issued patents;
- our ability to utilize our manufacturing facilities at efficient levels;
- potential significant litigation-related costs;
- the difficulties inherent in forecasting future operating expense levels, including with respect to costs associated with labor, utilities, transportation and raw materials;
- the costs related to compliance with increasing worldwide regulations;
- changes in our effective tax rates in the U.S., China or other jurisdictions; and
- the effects of public health emergencies, natural disasters, security risks, terrorist activities, international conflicts and other events beyond our control.

In addition, the market segments on which we are currently focused require products that (i) enable the growth of the Internet and the increased performance of mobile communication devices; (ii) support the reliability and efficiency of clean energy technology;

and (iii) improve the performance and comfort of mass transit systems. These markets have been characterized by wide fluctuations in product supply and demand. From time to time, these industries have experienced significant downturns, often in connection with, or in anticipation of, maturing product cycles, reductions in government spending, and declines in general economic conditions. These downturns have been characterized by diminished product demand, production over-capacity and accelerated price erosion. Our business is also subject to rapid technological changes and there can be no assurance, depending on the mix of future business, that products stocked in our inventory will not be rendered obsolete before we ship them. As a result of this and other factors, there can be no assurance that we will not experience material fluctuations in future revenue, gross margins, operating results and net income on a quarterly or annual basis. In addition, if our revenue, gross margins, operating results and net income do not meet the expectations of securities analysts or investors, the market price of our common stock may decline.

Our future success depends upon our ability to continue to innovate, improve our products, develop and market new products, and identify and enter new markets.

Our future success depends in part upon our ability to continue to develop new products and improve our product and process technologies. Our success in these efforts will be determined by our ability to anticipate market requirements in our product development efforts, and the acceptance and continued commercial success of the end user's products. Additionally, our success depends upon our ability to adapt to technological changes and to support established and emerging industry standards.

In particular, some of the markets on which we focus are characterized by frequent new product introductions, evolving industry standards, rapid changes in product and process technologies, price competition and many new potential applications. To continue to be successful in these areas, we must be able to consistently develop, produce and supply materials that meet the demanding expectations of customers for quality, performance and reliability at competitive prices. Our timely introduction of new products to meet these needs could be affected by engineering or other development program delays and problems in effectively and efficiently increasing production to meet customer needs. In addition, rapid technological change, significant pricing pressures and short lead times characterize the end-use markets for devices and equipment into which our products are often incorporated. Because we manufacture and sell our own materials to meet the needs of these markets, our results may be negatively affected by these factors.

We may be unable to adequately protect our proprietary rights, which may limit our ability to compete effectively.

Our success depends, in part, on our ability to protect our intellectual property. We primarily rely on patents, copyrights, and trademarks, as well as nondisclosure agreements and other methods to protect our proprietary technologies and processes. Despite our efforts to protect our proprietary technologies and processes, it is possible that competitors and other unauthorized third parties may obtain, copy, use or disclose our technologies, products, and processes. Moreover, the laws and/or judicial systems of foreign countries in which we design, manufacture, market and sell our products may afford little or no effective protection of our proprietary technology.

There can be no assurances that the claims allowed in our issued patents will be sufficiently broad to protect our technology. In addition, any of our existing or future patents may be challenged, invalidated or circumvented. As such, any rights under these patents may not provide us with meaningful protection. If our patents do not adequately protect our technology, our competitors may be able to offer products similar to ours. Our competitors may also be able to develop similar technology independently or design around our patents. We may also be negatively affected by, and subject to increased competition as a result of, the normal expiration of our issued patents.

We try to control access to and distribution of our technologies, documentation and other proprietary information. Despite these efforts, internal or external parties may attempt to copy, disclose, obtain or use our products or technology without authorization. Also, former employees may seek employment with our business partners,

customers or competitors, and there can be no assurance that the confidential nature of our proprietary information will be maintained in the course of such future employment.

We are exposed to business, economic, political, legal and other risks through our significant worldwide operations.

We have significant foreign operations, particularly in Asia and Europe, which exposes us to business, political and economic changes that could negatively impact our future sales, expenses and financial condition. For fiscal 2013, sales of our products to foreign customers accounted for approximately 78.0% of our net sales. As of December 31, 2013, we employed approximately 1,700 employees in Europe and Asia.

It is anticipated that with the passage of time, design decisions related to the products we make will be increasingly made by Asian, rather than European or North American-based, original equipment manufacturers (“OEMs”). There can be no assurance that we will be as successful obtaining design wins with respect to these Asian OEMs as we historically have been with European and North American OEMs.

Although we engage in hedging transactions to help reduce our exposure to currency exchange rate fluctuations, there can be no assurance that our competitive position will not be adversely affected by changes in the exchange rate of the U.S. dollar against other currencies.

Also, potential interest rate increases, as well as high energy and other consumer costs, could have an adverse impact on industrial and consumer spending patterns and could adversely impact demand for our products and the products which contain our materials.

While a substantial portion of our cash is generated outside the U.S., we require a significant amount of cash in the U.S. to address our operating requirements, the funding of acquisitions, debt and interest payments and other business expenditures. If we are unable to address our U.S. cash requirements through our U.S. operations cash flows, by efficient and timely repatriations of overseas cash, through borrowings under our current credit facility or from other sources of cash obtained at an acceptable cost, our business strategies and operating results could be adversely affected.

We are also subject to the risks associated with ongoing uncertainties and political and economic instability in many countries around the world, as well as economic disruption from acts of terrorism and the response to them by the U.S. and its allies. Other business risks associated with international operations include, but are not limited to, increased managerial complexities; air transportation disruptions; expropriation; currency controls; additional costs related to foreign taxes, tariffs and freight rate increases; exposure to different business practices and differing legal standards, particularly with respect to price protection and data privacy; intellectual property and environmental compliance; trade and travel restrictions; pandemics; import and export license requirements and restrictions; difficulties in staffing and managing worldwide operations; longer accounts receivable cycles and collections; and unexpected changes in regulatory requirements. We may also be subject to unanticipated income taxes, excise duties, import taxes, export taxes, value added tax, or other governmental assessments, and taxes may be impacted by changes in legislation in the tax jurisdictions in which we operate. In addition, our organization and capital structure may limit our ability to transfer funds between countries, particularly into the United States, without incurring adverse tax consequences.

We expect our business to continue to have a strong presence in Asia, particularly in China, in the foreseeable future, as the Asian marketplace is a key factor to our current and future success. Our operations in these markets may be adversely affected by China's continuously evolving laws and regulations, including those relating to taxation, import and export tariffs, currency controls, environmental regulations, and intellectual property rights and enforcement of those rights. Enforcement of existing laws or agreements may be inconsistent, as there is a high degree of fragmentation among regulatory authorities resulting in uncertainties as to which authorities have jurisdiction over particular parties or transactions. In addition, changes in the political environment, governmental policies, or U.S. and China relations could result in revisions to laws or regulations or their interpretation and enforcement, potentially resulting in increased taxation, restrictions on imports, import duties or currency revaluations, all of which could have an adverse effect on our business plans and operational results.

Availability of and changes in the costs and quality of certain key raw materials could negatively impact our profit margins and our ability to produce products in a timely manner to required specifications.

We use certain key raw materials in our manufacturing processes, including, but not limited to, copper and certain types of resins, ceramic materials and chemicals, all of which could be subject to price volatility due to availability, demand and global monetary policies. In addition, these materials are often obtained from single or limited sources that expose us to price increases, material shortages and increase the potential for inconsistent incoming material quality. Any inability to obtain timely deliveries of materials of acceptable quantity or quality, or a significant increase in the prices of materials, could have a material adverse effect on our operating results.

If we do not retain our key personnel, our ability to execute our business strategy could be adversely affected.

Our continued success depends to a significant extent upon the recruitment, retention and effective succession of our executive officers and key management and technical personnel, particularly our experienced engineers. The loss of the services of one or more of these key personnel could have a material adverse effect on our operating results. In addition, there could be a material adverse effect on our operating results if the turnover rates for engineers and other key personnel increase significantly or if we are unable to continue to attract and retain qualified personnel.

Implementation of our acquisition and divestiture strategies may not be successful, which could affect our ability to increase our revenues or our profitability.

A key element of our business strategy involves expansion through the acquisition of businesses, assets, products, or technologies that allow us to complement our existing product offerings, expand our market coverage, increase our engineering workforce or enhance our technological capabilities. Accordingly, our future performance will be impacted by our ability to identify appropriate

businesses and technologies to acquire, as well as effectively and efficiently integrating such acquisitions into Rogers. We may not succeed in such endeavors for a variety of reasons, including, but not limited to, the inability to identify businesses that have the technology or resources we need and, if we find such businesses, the possibility that we may not be able to purchase or license the technology or resources on commercially favorable terms or at all and, if we do make an acquisition, the possibility that we may not be able to effectively integrate the acquisition into Rogers.

In 2011, we purchased Curamik, an acquisition that required a significant level of investment. This required borrowing funds through our credit facility, which created long-term debt and made us subject to the various covenant requirements contained in the related credit agreement. Certain risks are inherent in any acquisition, such as the risk that the acquisition may not be accretive to our business or perform to our expectations going forward and that revenue opportunities, cost savings and other anticipated synergies will not be fully realized. In addition, there are particular risks related to Curamik itself, including, but not limited to, the following: a decline in sales to certain key customers; the cyclical nature of the semiconductor industry and the impact of that cyclical nature on sales and profits; the strict nature of labor laws in Germany and the impact on our ability to manage costs and react to downturns in the market; and increased exposure to significant fluctuations in raw material and commodity costs, particularly copper, which is a key component in Curamik's manufacturing process.

We also continually review our current business and product portfolio to attempt to maximize our business performance. We may in the future deem it appropriate to pursue the divestiture of product lines or businesses as conditions dictate. These strategic decisions could have a potential negative impact on our business. A successful divestiture depends on various factors, including our ability to effectively transfer liabilities, contracts, facilities and employees to any purchaser, identify and separate the intellectual property to be divested from the intellectual property that we wish to retain, reduce fixed costs previously associated with the divested assets or business, and collect the proceeds from any divestitures. In addition, if customers of the divested business do not receive the same level of service from the new owners, this may adversely affect our other businesses to the extent that these customers also purchase other products that we offer. All of these efforts require varying levels of management resources, which may divert our attention from other business operations. If we do not realize the expected benefits or synergies of any divestiture transaction, our financial position, results of operations and cash flows could be negatively impacted.

We are involved with certain litigation and disputes and may become involved in future litigation or other disputes all of which could give rise to potential contingencies, such as environmental, product liability and/or warranty claims, that could be costly to bring or defend and could result in a significant negative impact to our business.

We are subject to a variety of claims and lawsuits arising out of the conduct of our business that could ultimately have a material adverse impact on our business, including our results of operations, financial condition and cash flows. Such claims could result from environmental issues, product liability claims and general commercial litigation, among others.

Our products are typically highly specialized, proprietary materials that must meet very stringent performance requirements. We invest significant resources in the testing of our products to meet our product specifications. However, if any of our materials or products contain or are alleged to contain defects, we may be required to incur additional development and remediation costs or defend product liability claims arising from the alleged defects.

We are also subject to a variety of environmental issues, particularly considering the age of our business and the range of geographic areas and manufacturing processes we have been involved in over the course of time. Our estimation of any environmental liability is based on an evaluation of currently available information with respect to the situation, including existing technology, presently enacted laws and regulations, and our past experience in addressing environmental matters. However, there can be no assurances that our estimates will not be disputed or that any ultimate liability concerning this site will not have a material adverse effect on us.

We are currently engaged in proceedings involving a superfund site, as a participant in a group of potentially responsible parties (PRPs). Although current regulations impose potential joint and several liability upon each named party at any superfund site, we expect our contribution for cleanup to be limited due to the number of other PRPs, and our share of the alleged contributions of waste to the sites, which we believe is de minimis. We are also involved in the remediation of certain polychlorinated biphenyl (PCB) contamination at our Woodstock, Connecticut manufacturing facility. In addition, Rogers Corporate Headquarters located in Rogers, CT has entered into the Voluntary Corrective Action program with the Connecticut Department of Energy & Environmental Protection (DEEP) to meet the RCRA (Resource Conservation Recovery Act) Corrective Action program requirements related to potential contamination at its site in Rogers, CT.

Further, we are involved in certain asbestos-related product liability litigation. The level of such litigation has escalated in certain U.S. states in recent years and involves hundreds of companies that have been named as defendants. At December 31, 2013, there were 362 claims pending against us. We expect that additional claims will be brought against us in the future. Our ultimate liability with respect to such pending and unasserted claims is subject to various uncertainties, including the following:

- the number of claims that are brought in the future;
- the costs of defending and settling these claims;
- the risk of exhaustion of applicable insurance policies;
- the risk of insolvencies among our insurance carriers;
- the possibility that adverse jury verdicts could require us to pay damages in amounts greater than the amounts for which we have historically settled claims; and
- the risk of adverse changes in the Federal and State laws governing the compensation of asbestos claimants.

We believe we have sufficient insurance to cover the majority of costs related to these claims and that we have valid defenses to the majority of these claims and intend to defend ourselves vigorously in these matters. However, there can be no assurances that the ultimate resolution of these matters will be consistent with our expectations and will not have a material adverse effect on us. For further information, see Item 3 Legal Proceedings and Note 15 in Item 8 Financial Statements and Supplementary Data of this Form 10-K.

We are subject to increasingly strict environmental regulations, which could increase our expense and affect our operating results.

Our business is subject to increasingly strict environmental regulations that control and restrict the use, transportation, emission, discharge, storage and disposal of certain chemicals, gases and other substances used or produced in our various manufacturing processes. Public attention to environmental controls has continued to increase and changes in environmental regulations may require us to invest in potentially costly pollution control equipment or alter the way our products are made. In addition, we use hazardous and regulated materials that subject us to risks for strict liability for damages caused by accidental releases, regardless of fault. Any failure to control such materials adequately or to comply with regulatory restrictions or contractual obligations could increase our expenses and adversely affect our operating results.

New climate change regulations could require us to change our manufacturing processes worldwide or obtain substitute materials that may cost more or be harder to procure for our manufacturing operations. In addition, new restrictions on carbon dioxide or other greenhouse gas emissions could result in additional costs for us. The cost of complying, or of failing to comply, with these and other climate change and emissions regulations could have an adverse effect on our business plans and results of operations.

Our current reserve levels may not be adequate to cover potential exposures.

We establish reserves to cover various exposures, including uncollectible accounts receivable, excess or obsolete inventory, fair market value write-downs of certain assets, and various other liabilities. However, these reserves may not be adequate to cover future impairments or losses. These reserves are subject to analysis and adjustment on a regular basis and are based on management's best estimates based on the facts and circumstances known at the time. Such reserves are subject to many uncertainties, including the assumptions used to value certain assets, forward looking forecasted financial information, and bankruptcy or financial problems at key customers, among others. In the case of litigation matters for which reserves have not been established because the loss is not deemed probable or reasonably estimable, facts and circumstances could change related to such matters that could result in such matters being decided against us and require the payment of damages or other expenditures in amounts that are not presently accrued. The effects on our financial results of many of these factors depend in some cases on our ability to obtain insurance covering potential losses.

If we are unable to generate sufficient cash flow, we may not be able to service our debt obligations, including making payments on our outstanding line of credit.

In the first quarter of 2011, we borrowed \$145.0 million against our existing line of credit to finance our strategic acquisition of Curamik. At December 31, 2013, we have \$77.5 million of outstanding debt remaining out of a total credit facility of approximately \$265 million. Our ability to make payments of principal and interest on our indebtedness when due depends upon the cash flows generated from our future performance, which will be subject to general economic conditions, industry cycles and financial, business and other factors affecting our consolidated operations, many of which are beyond our control. If we are unable to generate sufficient cash flow from operations in the future to service our debt, we may be required to, among other things, seek additional financing in the debt or equity markets; refinance or restructure all or a portion of our indebtedness; sell selected assets; reduce or delay planned capital expenditures; or reduce or delay planned operating expenditures. Such measures might not be sufficient to enable us to service our debt, which could negatively impact our financial results. In addition, any such financing, refinancing, or sale of assets might not be available on economically favorable terms. In addition, our indebtedness could require us to dedicate a substantial portion of our cash flows from operations to payments on our debt, thereby reducing the amount of cash flows available for working capital, capital expenditures, investments in technology and research and development, acquisitions, dividends and other general corporate purposes; limit our flexibility in planning for, or reacting to, changes in the industries in which we compete;

place us at a competitive disadvantage compared to our competitors, some of whom have lower debt service obligations and greater financial resources than we do; limit our ability to borrow additional funds; or increase our vulnerability to general adverse economic and industry conditions.

Restrictions in our credit facility may limit our activities and materially and adversely affect our assets, financial position and cash flows.

Our current credit facility imposes, and future debt instruments to which we may become subject may impose, certain restrictions that limit our ability to engage in activities that could otherwise benefit the Company, including undertaking certain transactions, creating certain credit liens on our assets and incurring certain subsidiary indebtedness, among others. Our ability to comply with these financial restrictions and covenants is dependent on the cash flows generated from our future performance, which is subject to prevailing economic conditions and other factors, including factors that are beyond our control, as further discussed in this Item 1A. In addition, our credit facility requires us to maintain compliance with specified financial ratios. If we breach any of the covenants under our credit facility and we do not obtain appropriate waivers, our operations may be negatively impacted by the consequences of such breaches, including the declaration of any outstanding indebtedness to be immediately due and payable.

Changes in tax rates and exposure may lead to additional income tax liabilities.

We are subject to income taxes in both the U.S. and various foreign jurisdictions, and our domestic and international tax liabilities are subject to the allocation of income among these different jurisdictions. Our effective tax rates could be adversely affected by changes in the mix of earnings in countries with differing statutory tax rates, increases in tax rates, changes in the valuation of deferred tax assets and liabilities or in tax laws, each of which could adversely affect our profitability. In particular, the carrying value of deferred tax assets is dependent on our ability to generate future taxable income. In addition, the amount of income taxes we pay is subject to audits in various jurisdictions, and a material assessment by a tax authority could adversely affect profitability.

The requirements to evaluate goodwill, non-amortizable assets and other investments for impairment may result in a write-off of all or a portion of our recorded amounts, which would negatively affect our operating results and financial condition.

We are required to perform an impairment review of goodwill, non-amortizable intangible assets and other investments on an annual basis, or when facts and circumstances surrounding such assets indicate that a potential impairment may have occurred. In 2013, we did not have an impairment of our goodwill or non-amortizable intangible assets. However, in the fourth quarter of 2013, management believed, based on a financing transaction that closed in the fourth quarter of 2013, that our investment in Solicore had become impaired. As a result, this investment went through an evaluation process and we recognized an impairment of \$4.6 million on our investment in Solicore in the fourth quarter of 2013. See Note 17, Restructuring and Impairment for further detail on this impairment charge. Going forward, there can be no assurances that future impairments of goodwill, non-amortizable intangible assets or other investments will not occur. Any impairment may result in a write-off of all or a portion of our recorded amounts, which would negatively affect our operating results and financial condition.

Our stock price may be volatile.

The market price of our common stock has fluctuated widely from the beginning of fiscal year 2013 through the end of fiscal year 2013, with our stock price reaching a high of \$63.00 per share and a low of \$37.20 per share during that time period. Consequently, the current market price of our common stock may not be indicative of future market prices, and we may be unable to sustain or increase the value of an investment in our common stock. Factors affecting our stock price may include, but are not limited to, the following:

- changes in the long-term outlook for our Company in the markets we serve;
- variations in operating results from quarter to quarter;
- changes in earnings estimates by analysts or our failure to meet analysts' expectations;
- changes in the market value of publicly traded customers or suppliers, which could decrease their demand for our products;
- market conditions in the industries and markets in which we participate;
- general economic conditions;
- political changes, hostilities or natural disasters such as hurricanes and floods; and
- low trading volume of our common stock.

In addition, the New York Stock Exchange can experience significant price and volume fluctuations and continued market fluctuations could adversely affect the market price of our stock.

Employee benefit cost increases could reduce our profitability.

Our profitability is affected by employee benefit costs, particularly medical, pension and other employee benefits. In recent years, employee medical costs have increased due to factors such as the increase in health care costs in the U.S. These factors will continue to put pressure on our business and financial performance, as employee benefit costs continue to escalate. Although we actively seek to control increases in employee benefit costs and encourage employees to maintain healthy lifestyles to reduce future potential medical costs, there can be no assurance that we will succeed in limiting future cost increases. Continued employee benefit cost increases could have an adverse effect on our results of operations, cash flows and financial condition.

We also sponsor a limited number of defined benefit pension plans that cover certain employees. Our costs of providing defined benefit pension plans have risen dramatically over the past few years, and are dependent upon a number of factors and assumptions that drive our projected liabilities and annual expenses, such as discount rates, the actual and projected rates of return on the plans' assets, governmental regulation, global equity prices, portfolio composition and our required and/or voluntary contributions to the plans. Changes in assumptions, the ability to grow our pension investments over time to increase the value of the plans' assets, and other factors relating to worldwide and domestic economic trends and financial market conditions, could all have a negative impact on our pension plans, which could result in an increase in our pension liabilities, a reduction in the funded status of our plan, increases in annual expense recognized related to the plans, and requirements to increase funding for some or all of our defined benefit pension plans, among other factors, all of which could negatively impact our operations and financial condition.

To mitigate some of these risks, we amended our U.S. defined benefit pension plans during 2013 and participants will no longer accrue benefits under such plans, effectively freezing the plans going forward. While the risks outlined above will remain in force, the freezing of the plans will reduce overall risk, as we will no longer accrue new (annual) benefit obligations, thus reducing projected future liabilities and annual plan expenses.

Security breaches and other disruptions could compromise our information and expose us to liability, which could adversely affect our business/operating revenues, margins, competitive position and reputation.

In the ordinary course of our business, we collect and store sensitive data, including intellectual property, our proprietary business information and that of our customers and business partners, and personally identifiable information of our employees, in our data centers and on our networks. The secure processing, maintenance and transmission of this information is critical to our operations and business strategy. Despite our security measures, our information technology and infrastructure may be vulnerable to attacks by hackers or breached due to employee error, malfeasance or other disruptions. Any such breach could compromise our networks and the information stored there could be accessed, publicly disclosed, lost or stolen. Any such access, disclosure or other loss of information could result in legal claims or proceedings, liability under laws that protect the privacy of personal information, regulatory penalties, disruption to our operations, and damage to our reputation, which could adversely affect our business/operating revenues, margins, competitive position and reputation.

Our business could be negatively affected by collective labor arrangements and labor laws.

We have one U.S. collective bargaining unit and various non-U.S. collective labor arrangements. We are subject to potential work stoppages, union and works council campaigns and potential labor disputes, any of which could adversely impact our productivity and results of operations. In addition, collective bargaining agreements, union contracts and labor laws may impair our ability to reduce our labor costs by streamlining existing manufacturing facilities and in restructuring our business because of limitations on personnel and salary changes and similar restrictions. Further, we may be subject to work stoppages, which are beyond our control, at our suppliers or

customers

Our business could be negatively affected by unanticipated events that are beyond our control.

Our business and operating results may be affected by certain events that we cannot anticipate and that are beyond our control, such as natural disasters and national emergencies, which could disrupt production at our facilities, or at the facilities of our customers and suppliers, and cause delayed deliveries, canceled orders and possibly loss of market share. From time to time, we purchase certain raw materials from single or limited sources, and, even if our facilities are not directly affected by such events, we could be affected by interruptions of production at our suppliers. In addition, our customers could be affected by certain events, which could decrease demand for our products.

18

Item 1B. Unresolved Staff Comments

None.

19

Item 2. Properties

On December 31, 2013, we operated various manufacturing facilities and sales offices throughout the United States, Europe and Asia. The following table provides certain information about our principal general offices and manufacturing facilities:

Location	Floor Space (Sq Ft)	Type of Facility	Leased / Owned
United States			
Rogers, Connecticut	506,000	Manufacturing / Administrative Offices	Owned
Carol Stream, Illinois	215,000	Manufacturing	Owned
Chandler, Arizona	156,000	Manufacturing	Owned
Woodstock, Connecticut	152,000	Manufacturing	Owned
Chandler, Arizona	142,000	Manufacturing	Owned
Chandler, Arizona	120,000	Manufacturing	Owned
Windham, Connecticut	88,000	Formerly Manufacturing	Owned
Burlington, Massachusetts	5,000	R&D Lab and Office Space	Leased through 2/17*
Europe			
Ghent, Belgium	114,000	Manufacturing	Owned
Evergem, Belgium	77,000	Manufacturing	Owned
Eschenbach, Germany	149,000	Manufacturing / Administrative Offices	Leased through 6/21
Budapest, Hungary	25,000	Manufacturing	Leased through 2/19
Asia			
Suzhou, China	324,000	Manufacturing	Owned
Suzhou, China	170,000	Manufacturing / Administrative Offices	Owned
Suzhou, China	130,000	Manufacturing	Owned
Suzhou, China	92,000	Manufacturing	Owned
Ansan, Korea	40,000	Manufacturing	Leased through 10/14
Suzhou, China	30,000	Manufacturing	Owned
Tokyo, Japan	3,094	Sales Office	Leased through 1/14
Taipei, Taiwan, R.O.C.	1,000	Sales Office	Leased through 7/14
Hwasung City, Korea	1,000	Sales Office	Leased through 8/14
Singapore	1,000	Sales Office	Leased through 12/14
Shanghai, China	1,000	Sales Office	Leased through 1/15
Shenzhen, China	1,000	Sales Office	Leased through 5/14
Beijing, China	1,000	Sales Office	Leased through 5/15

* This lease commences when the property is turned over to Rogers Corporation which has not occurred to date. The anticipated commencement date of the lease is February 26, 2014.

Item 3. Legal Proceedings

We are currently engaged in the following environmental and legal proceedings:

Superfund Sites

We are currently involved as a potentially responsible party (PRP) in one active case involving a waste disposal site, the Chatham Superfund Site. The costs incurred since inception for this claim have been immaterial and have been primarily covered by insurance policies, for both legal and remediation costs. In this matter we have been assessed a cost sharing percentage of approximately 2% in relation to the range for estimated total cleanup costs of \$18.8 million to \$29.6 million. We believe we have sufficient insurance coverage to fully cover this liability and have recorded a liability and related insurance receivable of approximately \$0.4 million as of December 31, 2013, which approximates our share of the low end of the estimated liability range. We believe we are a de minimis participant at this site and, as such, have been allocated an insignificant percentage of the total PRP cost sharing responsibility. Based on facts presently known to us, we believe that the potential for the final results of this case having a material adverse effect on our results of operations, financial position or cash flows is remote. This case has been ongoing for many years and we believe that it will continue on for the indefinite future. No time frame for completion can be estimated at the present time.

In the fourth quarter of 2011, the United States Environmental Protection Agency (EPA) notified us that we were a PRP for the cleanup of the Omega Chemical Corporation Superfund Site in Los Angeles County, California. In the first quarter of 2012, we were notified that we were no longer a PRP related to this superfund site.

PCB Contamination

We have been working with the Connecticut Department of Energy and Environmental Protection (CT DEEP) and the EPA, Region I, in connection with certain polychlorinated biphenyl (PCB) contamination at our facility in Woodstock, Connecticut. The issue was originally discovered in the soil at the facility in the late 1990s, and this initial issue was remediated in 2000. Further contamination was later found in the surrounding groundwater, which we addressed in 2011 with the installation of a pump and treat system. Additional PCB contamination was uncovered at the facility in the original buildings, courtyards and surrounding areas, including an on-site pond. Remediation activities on the original buildings and courtyards were completed in 2013.

We have spent a total of approximately \$1.9 million in remediation and monitoring costs related to these PCB contamination issues. The future costs related to the maintenance of the groundwater pump and treat system now in place at the site are expected to be minimal. We believe that the remaining remediation activity will continue for several more years and no time frame for completion can be estimated at the present time.

Asbestos Litigation

A significant number of asbestos-related product liability claims have been brought against numerous United States industrial companies where the third-party plaintiffs allege personal injury from exposure to asbestos-containing products. We have been named, along with hundreds of other companies, as a defendant in some of these claims. In virtually all of these claims filed against us, the plaintiffs are seeking unspecified damages, or, if an amount is specified, such amount merely represents a jurisdictional amount. However, occasionally specific damages are alleged and in such situations, plaintiffs' lawyers often sue dozens of defendants, frequently without factual basis or support. As a result, even when a specific amount of damages is alleged, such action can be arbitrary, both as to the amount being sought and the defendant being charged with such damages.

We did not mine, mill, manufacture or market asbestos; rather we made a limited number of products which contained encapsulated asbestos. Such products were provided to industrial users. We stopped manufacturing these products in the late 1980s.

Claims

We have been named in asbestos litigation primarily in Illinois, Pennsylvania and Mississippi. As of December 31, 2013, there were 362 pending claims compared to 319 pending claims at December 31, 2012. The number of pending claims at a particular time can fluctuate significantly from period to period depending on how successful we have been in getting these cases dismissed or settled. Some jurisdictions prohibit specifying alleged damages in personal injury tort cases such as these, other than a minimum jurisdictional amount which may be required for such reasons as allowing the case to be litigated in a jury trial (which the plaintiffs believe will be more favorable to them than if heard only before a judge) or allowing the case to be litigated in federal court. This is in contrast to commercial litigation, in which specific alleged damage claims are often permitted. The prohibition on specifying alleged damages sometimes applies not only to the suit when filed but also during the trial - in some jurisdictions the plaintiff is not actually permitted to specify to the jury during the course of the trial the amount of alleged damages the plaintiff is claiming. Further, in those jurisdictions in which plaintiffs are permitted to claim specific alleged damages, many plaintiffs nonetheless still choose not to do so. In those cases in which plaintiffs are permitted to and choose to assert specific dollar amounts

in their complaints, we believe the amounts claimed are typically not meaningful as an indicator of a company's potential liability. This is because (1) the amounts claimed may bear no relation to the level of the plaintiff's injury and are often used as part of the plaintiff's litigation strategy, (2) the complaints typically assert claims against numerous defendants, and often the alleged damages are not allocated against specific defendants, but rather the broad claim is made against all of the defendants as a group, making it impossible for a particular defendant to quantify the alleged damages that are being specifically claimed against it and therefore its potential liability, and (3) many cases are brought on behalf of plaintiffs who have not suffered any medical injury, and ultimately are resolved without any payment or payment of a small fraction of the damages initially claimed. Of the 362 claims pending as of December 31, 2013, 69 claims do not specify the amount of damages sought, 291 claims cite jurisdictional amounts, and only two (2) claims (less than 1.0% of the total pending claims) specify the amount of damages sought not based on jurisdictional requirements. Of these two (2) claims, one (1) claim alleges compensatory and punitive damages of \$20 million each and one (1) claim alleges punitive damages of \$20 million. These two (2) claims name 21 and 29 defendants, respectively. However, for the reasons cited above, we do not believe that this data allows for an accurate assessment of the relation that the amount of alleged damages claimed might bear to the ultimate disposition of these cases.

We believe the rate at which plaintiffs filed asbestos-related suits against us increased in 2001, 2002, 2003 and 2004 because of increased activity on the part of plaintiffs to identify those companies that sold asbestos-containing products, but which did not directly mine, mill or market asbestos. A significant increase in the volume of asbestos-related bodily injury cases arose in Mississippi in 2002. This increase in the volume of claims in Mississippi was apparently due to the passage of tort reform legislation (applicable to asbestos-related injuries), which became effective on September 1, 2003 and which resulted in a higher than average number of claims being filed in Mississippi by plaintiffs seeking to ensure their claims would be governed by the law in effect prior to the passage of tort reform. The number of asbestos related suits filed against us decreased slightly in 2005 and 2006, but increased slightly in 2007, declined in 2008 and increased again in 2009 and 2010. The number of lawsuits filed against us in 2011, 2012 and 2013 was significantly higher than in 2010. These new lawsuits are reflected in reports of the National Economic Research Associates, Inc. ("NERA") and Marsh UA Inc. ("Marsh") reports. (See "Impact of Financials Statements" section below.)

Defenses

In many cases, plaintiffs are unable to demonstrate that they have suffered any compensable loss as a result of exposure to our asbestos-containing products. We continue to believe that a majority of the claimants in pending cases will not be able to demonstrate exposure or loss. This belief is based in large part on the limited number of asbestos-related products manufactured and sold by us and the fact that the asbestos was encapsulated in such products. In addition, even at sites where the presence of an alleged injured party can be verified during the same period those products were used, our liability cannot be presumed because even if an individual contracted an asbestos-related disease, not everyone who was employed at a site was exposed to the asbestos containing products that we manufactured. Based on these and other factors, we have and will continue to vigorously defend ourselves in asbestos-related matters.

Dismissals and Settlements

Cases involving us typically name 50-300 defendants, although some cases have had as few as one (1) and as many as 833 defendants. We have obtained dismissals of many of these claims. For the year ended December 31, 2013, 115 claims were dismissed and twenty-three (23) were settled. For the year ended December 31, 2012, we were able to have 93 claims dismissed and settled sixteen (16) claims. The majority of costs have been paid by our insurance carriers, including the costs associated with the small number of cases that have been settled. Such settlements totaled approximately \$4.8 million for the year ended December 31, 2013, compared to \$6.3 million for the year ended December 31, 2012 and such settlement amounts were paid by our insurance carriers. Although these figures provide some insight into our experience with asbestos litigation, no guarantee can be made as to the dismissal and settlement rates that we will experience in the future.

Settlements are made without any admission of liability. Settlement amounts may vary depending upon a number of factors, including the jurisdiction where the action was brought, the nature and extent of the disease alleged and the

associated medical evidence, the age and occupation of the claimant, the existence or absence of other possible causes of the alleged illness of the alleged injured party and the availability of legal defenses, as well as whether the action is brought alone or as part of a group of claimants. To date, we have been successful in obtaining dismissals for many of the claims and have settled only a limited number. The majority of settled claims were settled for immaterial amounts, and the majority of such costs have been paid by our insurance carriers. In addition, to date, we have not been required to pay any punitive damage awards.

Potential Liability

National Economic Research Associates, Inc. (NERA), a consulting firm with expertise in the field of evaluating mass tort litigation asbestos bodily-injury claims, has historically been engaged to assist us in projecting our future asbestos-related liabilities and defense costs with regard to pending claims and future unasserted claims. Projecting future asbestos costs is subject to numerous variables that are extremely difficult to predict, including the number of claims that might be received, the type and severity of the disease alleged by each claimant, the long latency period associated with asbestos exposure, dismissal rates, costs of medical

treatment, the financial resources of other companies that are co-defendants in claims, uncertainties surrounding the litigation process from jurisdiction to jurisdiction and from case to case and the impact of potential changes in legislative or judicial standards, including potential tort reform. Furthermore, any predictions with respect to these variables are subject to even greater uncertainty as the projection period lengthens. In light of these inherent uncertainties, the variability of our claims history and consultations with NERA, we currently believe that ten years is the most reasonable period for recognizing a reserve for future costs, and that costs that might be incurred after that period are not reasonably estimable at this time. As a result, we also believe that our ultimate asbestos-related contingent liability (i.e., our indemnity or other claim disposition costs plus related legal fees) cannot be estimated with certainty. (See "Impact of Financials Statements" section below for further discussion.)

Insurance Coverage

Our applicable insurance policies generally provide coverage for asbestos liability costs, including coverage for both resolution and defense costs. Following the initiation of asbestos litigation, an effort was made to identify all of our primary, umbrella and excess level insurance carriers that provided applicable coverage beginning in the 1950s through the mid-1980s. We located primary policies for all such years except for the early 1960s. With respect to this period, we entered into an arrangement with ACE Property & Casualty Insurance Company in 2005, pursuant to which we and they share in asbestos liabilities allocable to such period. We have located umbrella or excess layer policies for all such years except for the period from May 18, 1961 to May 18, 1964. Where appropriate, carriers were put on notice of the litigation. Marsh USA, Inc., also known as Marsh Risk Consulting (Marsh), a consulting firm with expertise in the field of evaluating insurance coverage and the likelihood of recovery for asbestos-related claims, has historically been engaged to work with us to project our insurance coverage for asbestos-related claims. Marsh's conclusions are based primarily on a review of our coverage history, application of reasonable assumptions on the allocation of coverage consistent with certain industry practices, an assessment of the creditworthiness of the insurance carriers, analysis of applicable deductibles, retentions and policy limits, the experience of NERA and a review of NERA's reports.

Cost Sharing Agreement

To date, our insurance carriers have paid for substantially all of the settlement and defense costs associated with our asbestos-related claims. The current cost sharing agreement between us and such insurance carriers is primarily designed to facilitate the ongoing administration and payment of such claims by the carriers until the applicable insurance coverage is exhausted. This agreement, which replaced an older agreement which had expired, can be terminated by election of any party thereto after January 25, 2015. Absent any such election, the agreement will continue until a party elects to terminate it.

In 2013, the primary layer insurance policies providing coverage for the January 1, 1966 to January 1, 1967 period exhausted. The cost sharing agreement contemplates that any excess carrier over exhausted primary layer carriers will become a party to the cost sharing agreement, replacing the coverage provided by the exhausted primary policies if the carrier providing such excess coverage is not already a party to the cost sharing agreement. The excess carrier providing coverage for the period set forth above is currently providing applicable insurance coverage in accordance with the allocation provisions of the cost sharing agreement, but has not yet signed that agreement.

Impact on Financial Statements

The models developed for determining the potential exposure and related insurance coverage were developed by outside consultants deemed to be experts in their respective fields with the forecast for asbestos related liabilities generated by NERA and the related insurance receivable projections developed by Marsh. The models contain numerous assumptions that significantly impact the results generated by the models. We believe the assumptions made are reasonable at the present time, but are subject to uncertainty based on the actual future outcome of our asbestos litigation. Historically, due to the inherent uncertainties of the forecast process and our limited amount of settlement and claims history, we utilized a forecast period of five years, which we concluded was the most reasonable period for recognizing a reserve for projected asbestos liabilities, and that costs that might be incurred after that period were not reasonably estimable at that time. In 2012, we reviewed this assumption and determined that it was appropriate to extend the forecast period from five years to ten years. We reached this conclusion due to the fact that we now have considerably more experience in addressing asbestos related lawsuits and have a longer history of

activity to use as a baseline to more accurately project the liability over a longer period than previously disclosed. Also, settlement trends have become more meaningful in recent years and we believe that we now have a more meaningful history of data on which to base our projections. Further, we determined that a ten year projection period is now appropriate as, although we have a longer and more consistent history of data over the last few years, we do not believe we have sufficient data to justify a longer projection period at this time. As of December 31, 2013, the estimated liability and estimated insurance recovery for the ten-year period through 2023 was \$59.7 million and \$57.1 million, respectively. For sensitivity purposes, if the forecast period were to be decreased to five years, the projected liability and related insurance recovery would be \$34.9 million and \$33.6 million, respectively. Further, we determined if the forecast period were increased to fifteen years, the projected liability and related insurance recovery would be \$77.2 million and \$73.2 million, respectively.

The amounts recorded for the asbestos-related liability and the related insurance receivables described above were based on facts known at the time and a number of assumptions. However, projecting future events, such as the number of new claims to be filed each year, the average cost of disposing of such claims, the length of time it takes to dispose of such claims, coverage issues among insurers and the continuing solvency of various insurance companies, as well as the numerous uncertainties surrounding asbestos litigation in the United States could cause the actual liability and insurance recoveries for us to be higher or lower than those projected or recorded.

There can be no assurance that our accrued asbestos liabilities will approximate our actual asbestos-related settlement and defense costs, or that our accrued insurance recoveries will be realized. We believe that it is reasonably possible that we will incur additional charges for our asbestos liabilities and defense costs in the future, which could exceed existing reserves, but such excess amount cannot be reasonably estimated at this time. We will continue to vigorously defend ourselves and believe we have substantial unutilized insurance coverage to mitigate future costs related to this matter.

Other Environmental and General Litigation

In the second quarter of 2010, the CT DEEP contacted us to discuss a disposal site in Killingly, Connecticut. We undertook internal due diligence work related to the site to better understand the issue and our alleged involvement. As a matter of procedure, we have submitted an insurance claim for the disposal site, but we currently do not know the nature and extent of any alleged contamination at the site, how many parties could be potentially involved in any remediation, if necessary, or the extent to which we could be deemed a potentially responsible party. CT DEEP has not made any assessment of the nature of any potential remediation work that may be done, nor have they made any indication of any potential costs associated with such remediation. Therefore, based on the facts and circumstances known to us at the present time, we are not able to estimate the probability of incurring a contingent liability related to this site, nor are we able to reasonably estimate any potential range of exposure at this time. As such, no reserve has been established for this matter at this time. We continually monitor this situation and are in correspondence with the CT DEEP as appropriate. When and if facts and circumstances related to this matter change, we will review our position and our ability to estimate the probability of any potential loss contingencies, as well as the range of any such potential exposure.

The Rogers Corporate Headquarters located in Rogers, Connecticut is part of the Connecticut Voluntary Corrective Action Program (VCAP). As part of this program, we have had conversations with the CT DEEP to begin to determine if any corrective actions need to be taken at the site related to any potential contamination issues. We are currently in the early stages of evaluating this matter and have initiated internal due diligence work related to the site to better understand any potential issues. However, at this time, it is currently unknown what the nature and extent of any potential contamination is at the site, nor what any potential remediation or associated costs would be if any such issues were found. Therefore, based on the facts and circumstances known to us at the present time, we are unable to estimate the probability of incurring a contingent liability related to this site, nor are we able to reasonably estimate any potential range of exposure at this time. As such, no reserve has been established for this matter at this time. In 2013, we became aware of a claim made by a sales agent/distributor in Europe for the alleged improper termination of our relationship. The sales agent/distributor seeks compensation for the terminated relationship. At this point in time, we are very early in the process and can not reasonably assess the probability of an unfavorable outcome related to this matter, nor reasonably estimate any potential contingent liability based upon the facts and circumstances known to us at this time. As such, no reserve has been established for this matter at this time.

In addition to the above issues, the nature and scope of our business brings us in regular contact with the general public and a variety of businesses and government agencies. Such activities inherently subject us to the possibility of litigation, including environmental and product liability matters that are defended and handled in the ordinary course of business. We have established accruals for matters for which management considers a loss to be probable and reasonably estimable. It is the opinion of management that facts known at the present time do not indicate that such litigation, after taking into account insurance coverage and the aforementioned accruals, will have a material adverse impact on our results of operations, financial position, or cash flows.

Item 4. Mine Safety Disclosures

Not applicable.

25

Part II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

Our common stock is traded on the New York Stock Exchange under the symbol "ROG". As of the end of business on February 4, 2014, we had 511 shareholders of record. On the same date, the trading price of our common stock closed at \$57.88 per share.

Capital Stock Market Prices

The following table sets forth the high and low prices during each quarter of the last two fiscal years on a per share basis:

	2013		2012	
	High	Low	High	Low
Fourth	\$63.00	\$56.47	\$50.09	\$38.39
Third	60.97	46.90	44.55	34.61
Second	48.80	37.20	41.24	35.87
First	51.96	46.31	42.29	32.19

Dividend Policy

We did not pay any dividends on our common stock in fiscal 2013 and 2012. We periodically evaluate the desirability of paying a dividend; however, at present, we expect to maintain a policy of emphasizing longer-term growth of capital rather than immediate dividend income. We are also currently restricted in our ability to pay dividends under our current, amended credit agreement (see Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations in this Form 10-K), in that we cannot make cash dividend payments if a default or event of default has occurred and is continuing or would result from the cash dividend payment.

Item 6. Selected Financial Data

(Dollars in thousands, except per share amounts)

	2013	2012	2011	2010	2009
Sales and Income From Continuing Operations					
Net sales	\$537,482	\$498,761	\$548,341	\$373,230	\$286,777
Income (loss) before income taxes	48,885	22,650	55,768	44,401	(16,555)
Income (loss)	37,659	69,134	44,250	38,551	(59,185)
Per Share Data From Continuing Operations

The financial data included within the preceding table should be read in conjunction with our Management's Discussion and Analysis of Financial Condition and Results of Operations as well as the Financial Statements and Supplementary Data (Items 7 and 8 of this Form 10-K), and with our previously filed Forms 10-K.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion and analysis of our financial condition and results of operations should be read together with the Selected Financial Data and our Consolidated Financial Statements and the related notes that appear elsewhere in this Form 10-K.

In the following discussion and analysis, we sometimes provide financial information that was not prepared in accordance with U.S. generally accepted accounting principles (GAAP). Management believes that this non-GAAP information provides meaningful supplemental information regarding the Company's performance by excluding certain expenses that are generally non-recurring or otherwise may not be indicative of the core business operation results. In general, the Company believes that the additional non-GAAP financial information provided herein is useful to management and investors in assessing the Company's historical performance and for planning, forecasting and analyzing future periods. However, non-GAAP information has limitations as an analytical tool and should not be considered in isolation from, or as an alternative to, financial information prepared in accordance with GAAP. Any time we provide non-GAAP information in the following narrative we identify it as such and in close proximity provide the most directly comparable GAAP financial measure as well as the information necessary to reconcile the two measures.

Forward Looking Statements

Certain statements in this Form 10-K may constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are based on management's expectations, estimates, projections and assumptions. Words such as "expects," "anticipates," "intends," "believes," "estimates," "should," "target," "may," "project," "guidance," and variations of such words and similar expressions are intended to identify such forward-looking statements. Such forward-looking statements involve known and unknown risks, uncertainties, and other factors that may cause our actual results or performance to be materially different from any future results or performance expressed or implied by such forward-looking statements. Such factors include, but are not limited to, changing business, economic, and political conditions both in the United States and in foreign countries, particularly in light of the uncertain outlook for global economic growth, particularly in several of our key markets; uncertainty regarding resolution of the United States fiscal cliff and debt ceiling issues; increasing competition; any difficulties in integrating acquired businesses into our operations and the possibility that anticipated benefits of acquisitions and divestitures may not materialize as expected; delays or problems in completing planned operational enhancements to various facilities; our achieving less than anticipated benefits and/or incurring greater than anticipated costs relating to streamlining initiatives or that such initiatives may be delayed or not fully implemented due to operational, legal or other challenges; changes in product mix; the possibility that changes in technology or market requirements will reduce the demand for our products; the possibility of significant declines in our backlog; the possibility of breaches of our information technology infrastructure; the development and marketing of new products and manufacturing processes and the inherent risks associated with such efforts and the ability to identify and enter new markets; the outcome of current and future litigation; our ability to retain key personnel; our ability to adequately protect our proprietary rights; the possibility of adverse effects resulting from the expiration of issued patents; the possibility that we may be required to recognize impairment charges against goodwill, non-amortizable assets and other investments in the future; the possibility of increasing levels of excess and obsolete inventory; increases in our employee benefit costs could reduce our profitability; the possibility of work stoppages, union and work council campaigns, labor disputes and adverse effects related to changes in labor laws; the accuracy of our analysis of our potential asbestos-related exposure and insurance coverage; the fact that our stock price has historically been volatile and may not be indicative of future prices; changes in the availability and cost and quality of raw materials, labor, transportation and utilities; changes in environmental and other governmental regulation which could increase expenses and affect operating results; our ability to accurately predict reserve levels; our ability to obtain favorable credit terms with our customers and collect accounts receivable; our ability to service our debt; certain covenants in our debt documents could adversely restrict our financial and operating flexibility; fluctuations in foreign currency

exchange rates; and changes in tax rates and exposure which may increase our tax liabilities. Such factors also apply to our joint ventures. We make no commitment to update any forward-looking statement or to disclose any facts, events, or circumstances after the date hereof that may affect the accuracy of any forward-looking statements, unless required by law. Additional information about certain factors that could cause actual results to differ from such forward-looking statements include, but are not limited to, those items described in Item 1A, Risk Factors, in this Form 10K.

Business Overview

Company Background and Strategy

We are a global enterprise that provides our customers with innovative solutions and industry leading products in a variety of markets, including portable communications, communications infrastructure, consumer electronics, mass transit, automotive, defense and clean technology. We generate revenues and cash flows through the development, manufacture, and distribution of specialty material-based products that are sold to multiple customers, primarily original equipment manufacturers (OEMs) and

28

contract manufacturers that, in turn, produce component products that are sold to end-customers for use in various applications. As such, our business is highly dependent, although indirectly, on market demand for these end-user products. Our ability to forecast future sales growth is largely dependent on management's ability to anticipate changing market conditions and how our customers will react to these changing conditions. It is also highly limited due to the short lead times demanded by our customers and the dynamics of serving as a relatively small supplier in the overall supply chain for these end-user products. In addition, our sales represent a number of different products across a wide range of price points and distribution channels that do not always allow for meaningful quantitative analysis of changes in demand or price per unit with respect to the effect on sales and earnings.

Strategically, our current focus is on three mega trends that we believe will fuel the future growth of our Company - continued growth of the internet and the variety of ways in which it can be accessed, expansion of mass transit, and further investment in clean technology. These trends and their related markets all require materials that perform to the highest standards, a characteristic which has been a key strength of our products over the years. We are also focused on growing our business both organically and through strategic acquisitions or technology investments that will add to or expand our product portfolio, as well as strengthen our presence in existing markets or expand into new markets. We will continue to focus on business opportunities and invest in expansion around the globe. Our vision is to be the leading innovative, growth oriented, and high technology materials solutions provider for our selective markets. To achieve this vision, we must have an organization that can cost effectively develop, produce and market products and services that provide clear advantages for our customers and markets.

2013 Executive Summary

In 2013, Rogers continued its transformation into a more agile, innovative and market driven organization. We experienced strong sales growth, particularly in the Power Electronics Solutions and Printed Circuit Materials operating segments, and were able to leverage this growth into stronger profitability as a result of the streamlining activities that were initiated in 2012. Rogers' core management team is now in place, and we are beginning to see the results of all the work that has already gone into realigning the Corporation both internally and externally to better service our customers and markets. We are continuing to work to improve the Corporation and have launched significant projects targeted at improving our infrastructure, particularly our information systems and manufacturing planning capabilities. We are also looking for new ways to grow, both organically through a combination of new product launches, new market applications, and geographic expansion, as well as externally through targeted acquisitions and technology initiatives. We announced the opening of the Rogers Innovation Center, a partnership with Northeastern University, that will focus on the long-term development of new technology platforms that we believe will be another opportunity to provide the future growth we are working to secure. We believe that the recent actions taken to transform Rogers will provide a solid base for us to achieve our strategic goals and to increase value for our shareholders.

From a results perspective, we achieved net sales of \$537.5 million in 2013, an increase of 7.8% from \$498.8 million in 2012. This strong rebound in 2013 can be primarily attributed to the growth in the Printed Circuit Materials (PCM) operating segment of 14.2% from \$161.9 million in 2012 to \$184.9 million in 2013 and in the Power Electronics Solutions (PES) operating segment of 19.7% from \$134.3 million in 2012 to \$160.7 million in 2013. At PCM, these increases were driven by significant growth in global telecommunications infrastructure capacity in both 3G and 4G base stations and antenna systems, as well as other new application areas such as automotive radar systems. At PES, these increases were driven by a significant rebound in demand for energy efficient motor drives, as well as the return of rail and solar power investment projects. These increases were partially offset by a 6.3% decline in sales in the High Performance Foams operating segment from \$179.4 million in 2012 to \$168.1 million in 2013. This decline was driven by lower demand in mobile device applications, specifically in the tablet segment due in part to design changes and shifting market dynamics. However, significant progress was made in penetrating new opportunities in the consumer and general industrial segments where we continue to expand sales through application, technology and geographic expansion.

From an operating results perspective, we achieved \$49.3 million in operating income during 2013, a 92.0% improvement over the \$25.7 million achieved in 2012. 2013 and 2012 operating results included approximately \$12.6

million and \$19.7 million of special charges, respectively. The 2013 special charges were related to the impairment of an investment in Solicore (see Footnote 9 - Investment) and severance related charges, while the 2012 special charges were related primarily to the various streamlining and restructuring activities that took place during the year.

Excluding these charges, operating results improved as a percentage of sales by 240 basis points from 9.1% in 2012 to 11.5% in 2013. These increases can be attributable both to the increased volumes achieved in 2013 as compared to 2012, as well as the increased operating leverage we now enjoy as a result of the streamlining initiatives that began in 2012.

Going forward, we expect to experience continued success in our core markets, with pockets of pressure particularly in the mobile internet device market, as we expect rapid technology advancements as well as increased competition to put pressure on our sales volumes and profitability. However, we do believe many opportunities for growth exist, particularly as we expand our presence across new markets and regions, as well as further diversify our product portfolio in the markets we serve today.

Results of Continuing Operations

The following table sets forth, for the periods indicated, selected operations data expressed as a percentage of net sales.

	2013	2012	2011
Net sales	100.0%	100.0%	100.0%
Gross margins	34.9%	31.8%	32.6%
Selling and administrative expenses	19.8%	20.0%	18.9%
Research and development expenses	4.0%	3.9%	3.9%
Restructuring and impairment charges	2.6%	2.8%	0.1%
Operating income (loss)	9.2%	5.1%	9.7%
Equity income in unconsolidated joint ventures	0.8%	1.0%	1.0%
Other income (expense), net	—	—	0.4%
Realized investment gain (loss)	(0.6)%	(0.7)%	—
Interest income (expense), net	(0.6)%	(0.9)%	(0.9)%
Gain on acquisition or disposal	—	—	—
Income (loss) from continuing operations before income taxes	9.1%	4.5%	10.2%
Income tax expense (benefit)	2.1%	(9.3)%	2.1%
Income (loss) from continuing operations	6.9%	13.8%	8.1%

2013 vs. 2012

Net Sales

Net sales in 2013 were \$537.5 million, a 7.8% increase from \$498.8 million of sales in 2012. The increase in net sales in 2013 is primarily related to the significantly improved performance of the Power Electronics Solutions operating segment, which experienced a 19.7% increase in net sales from \$134.3 million in 2012 to \$160.7 million in 2013, and the Printed Circuit Materials operating segment, which achieved a 14.2% increase in net sales from \$161.9 million in 2012 to \$184.9 million in 2013. These increases were partially offset by a 6.3% decline in net sales in the High Performance Foams operating segment from \$179.4 million in 2012 to \$168.1 million in 2013. See “Segment Sales and Operations” below for further discussion on segment performance.

Gross Margin

Gross margin increased by approximately 310 basis points from 31.8% in 2012 to 34.9% in 2013. 2013 results included approximately \$0.9 million of special charges related to relocation costs associated with the move of certain manufacturing operations from the Power Electronics Solutions manufacturing facility in Eschenbach, Germany to a lower cost facility in Hungary. Excluding these special charges, non-GAAP gross margin improved by approximately 330 basis points from 31.8% in 2012 to 35.1% in 2013. The primary driver of the improvement in gross margin was the increased sales volumes achieved during 2013, which contributed approximately 70 basis points to the improvement, as well as the impact from streamlining activities, which contributed an additional 20 basis point improvement to our overall results. The remaining net improvement of 240 basis points is attributable primarily to efficiencies in the production process that enabled us to absorb lower cost, incremental manufacturing capacity through our existing manufacturing base while continuing to implement improvements in supply chain, product

quality and procurement.

Selling and Administrative Expenses

Selling and administrative (S&A) expenses were \$106.4 million in 2013, an increase of 6.7% from \$99.7 million in 2012. 2013 results included approximately \$1.3 million of special charges comprised of \$0.6 million in costs related to the move of certain manufacturing operations from the Power Electronic Solutions manufacturing facility in Eschenbach, Germany to a lower cost

30

facility in Hungary and \$0.7 million of other severance related charges. 2012 results included approximately \$5.8 million of special charges comprised primarily of a \$2.9 million charge taken as a result of increasing the forecast period on asbestos related liabilities from 5 to 10 years during the fourth quarter of 2012, as well as a \$2.0 million charge related to the settlement of a pension obligation with the former Chief Executive Officer of the Company. Excluding these charges, selling and administrative expense increased from \$93.8 million in 2012 to \$105.0 million in 2013. As a percentage of sales, excluding special charges, non-GAAP selling and administrative expenses increased from 18.8% in 2012 to 19.5% in 2013. The overall increase in expenses is due to a variety of factors, including \$9.3 million of incremental incentive and equity compensation costs, as there was no incentive compensation during 2012 due to the decline in results as compared to 2011, and \$1.6 million of higher amortization expense related to Curamik intangible assets as the amortization expense is based on the expected future cash flows related to the respective assets, which results in some year to year volatility. These increases were partially offset by cost savings of approximately \$5.7 million primarily related to changes in the defined benefit pension plans and the streamlining initiatives initiated in 2012 and 2013. The remaining net increases is primarily attributable to incremental expenditures in certain key strategic areas, such as sales and marketing, strategic planning, information technology and executive recruiting - expenditures all targeted at better positioning the Company for future growth.

Research and Development Expenses

Research and development (R&D) expenses were \$21.6 million in 2013, an increase of 12.1%, from \$19.3 million in 2012. As a percentage of sales, R&D expenses were 4.0% in 2013 and 3.9% in 2012. The increase in R&D expenditures is consistent with our long term strategic plan of investing up to 6% of net sales back into R&D activities. In the past year, we have made concerted efforts to begin realigning our R&D organization to better fit the future direction of the Company, including dedicating resources to focus on current product extensions and enhancements to build our short term technology needs, as well as increasing investments directed at developing new platforms and technologies that are focused on long term growth initiatives, as evidenced by our partnership with Northeastern University in Boston, Massachusetts that will create the Rogers Innovation Center on their campus.

Restructuring and Impairment Charges

Restructuring and impairment charges were \$10.4 million in 2013 as compared to \$14.1 million in 2012. In 2013, these charges were comprised primarily of the following: (i) \$4.6 million related to the impairment charge on the investment in Solicore, Inc. , (ii) \$4.2 million of severance and related charges as a result of additional streamlining initiatives as well as changes to the executive management team, and (iii) a \$1.5 million curtailment charge related to the freezing of the defined benefit pension plans. In 2012, these charges were comprised primarily of the following: (i) \$7.1 million in severance related charges resulting from the streamlining initiatives that took place throughout the year, including the early retirement program implemented in the first quarter of 2012; (ii) approximately \$2.3 million related to the shut-down of the Bremen manufacturing facility in Germany and relocation of certain production to the manufacturing facility in Carol Stream, Illinois; and (iii) \$3.8 million in severance related charges resulting from actions taken to move the final inspection operations of Curamik from Germany to Hungary.

Equity Income in Unconsolidated Joint Ventures

Equity income in unconsolidated joint ventures was \$4.3 million in 2013, a decrease of 8.8% from \$4.7 million in 2012. The decline was primarily due to the depreciation of the Japanese Yen against the U.S. dollar of approximately 22.2% year over year, as well as the generally softer demand across most of the joint venture end markets.

Other Income (Expense), Net

Other income (expense), net was expense of \$1.2 million in 2013 as compared to expense of \$0.2 million in 2012. 2013 results included approximately \$0.7 million of unfavorable mark to market adjustments related to copper hedging contracts and approximately \$0.3 million related to unfavorable foreign currency translation adjustments. 2012 results included approximately \$1.0 million of unfavorable foreign currency translation adjustment, partially offset by a \$1.7 million gain from the sale of certain assets at the Arizona and Bremen, Germany manufacturing facilities.

Realized Investment Gain (Loss)

Realized investment gain (loss) represents the portion of the auction rate security impairment that relates to credit losses and is required to be recorded in the consolidated statements of income (loss). There was no loss recognized in 2013 and a loss of \$3.2 million recognized in 2012. The 2012 loss was a result of the liquidation of the full auction rate securities portfolio, which resulted in the Company receiving net cash proceeds of approximately \$25.4 million.

Interest Income (Expense), Net

Interest income (expense), net was expense of \$3.5 million in 2013 as compared to expense of \$4.3 million in 2012. This expense relates to the interest expense on our long-term debt, as well as the interest expense on the long term obligation related to the leased Power Electronic Solutions manufacturing facility in Eschenbach, Germany. The overall decline in the expense is driven by the decline in long term debt during 2013 as we paid down the facilities by \$20.5 million from \$98.0 million at December 31, 2012 to \$77.5 million at December 31, 2013.

Income Tax Expense (Benefit)

Our effective tax rate was 23.0% in 2013 and (205.2)% in 2012. In both 2013 and 2012, our tax rate was favorably impacted by the tax benefit associated with certain discrete rate items recorded during the year and also benefited from favorable tax rates on certain foreign business activity. In 2013, the rate was primarily impacted by the following items: (i) 5.3% benefit related to the lapse of statute in accordance with applicable accounting guidance; and (ii) 6.8% benefit related to foreign source income which is taxed at lower rates than income generated in the U.S. In 2012, the rate was primarily impacted by the following items: (i) 232.5% benefit related to the reversal of the valuation allowance on the U.S. deferred tax assets; and (ii) 16.1% benefit related to foreign source income which is taxed at lower rates than income generated in the U.S.

In 2009, we established a valuation allowance against substantially all of our U.S. deferred tax assets as we concluded that we did not have sufficient evidence to support the position that these assets would be utilized in the future. This conclusion was reached primarily due to the presence of recent cumulative losses in the U.S. and upon consideration of all other available evidence, both positive and negative, using a “more likely than not standard” in accordance with applicable accounting guidance. As of the end of the third quarter of 2012, we concluded that a valuation allowance against these assets is no longer necessary as we are no longer in, nor are we expecting to be in, a cumulative loss in the foreseeable future. Also, in appropriate circumstances we have the opportunity to undertake a tax planning strategy to ensure that our deferred tax assets do not expire unutilized. This strategy is based upon our ability to make a tax election to capitalize certain expenses that will result in generating taxable income to allow us to utilize our deferred tax assets before they expire. We would undertake such a strategy to realize these deferred tax assets prior to expiration only if we determined it was reasonable, prudent, and feasible. This, along with other positive evidence, such as our recent history of positive taxable income, led us to conclude in 2012 that it is more likely than not that we will ultimately be able to realize our deferred tax assets.

We currently have a \$1.0 million net operating loss in one of our Chinese entities that will begin to expire in 2017. We believe that we will generate sufficient taxable income in China such that this carryforward should be fully realized.

Backlog

The backlog of firm orders was \$50.5 million at December 31, 2013, as compared to \$43.3 million at December 31, 2012. The increase at the end of 2013 was primarily related to the Power Electronics Solutions and Printed Circuit Materials operating segments, which experienced an increase in backlog of \$3.6 million and \$3.7 million, respectively, at December 31, 2013 as compared to December 31, 2012.

2012 vs. 2011

Net Sales

Net sales in 2012 were \$498.8 million, a 9.0% decrease from \$548.3 million of sales in 2011. The decline in sales in 2012 is primarily related to the performance of the Power Electronics Solutions operating segment, which experienced a 25.5% decrease in sales from \$180.2 million in 2011 to \$134.3 million in 2012. Sales in the Printed Circuit

Materials operating segment also declined slightly, from \$166.4 million in 2011 to \$161.9 million in 2012. These declines were partially offset by a slight increase in sales in the High Performance Foams operating segment from \$177.6 million in 2011 to \$179.4 million in 2012. See “Segment Sales and Operations” below for further discussion on segment performance.

Gross Margin

Gross margin decreased by approximately 80 basis points from 32.6% in 2011 to 31.8% in 2012. The primary drivers of the decrease in margins was the decline in sales volumes from 2011 to 2012, which contributed approximately 25 basis points to the decline, as well as a 6.5% decline in overall inventory levels from 2012 to 2011 resulting in unfavorable absorption during the period. This decrease is primarily attributable to our focus on working capital management and lowering inventory levels to better match current demand. This decline was partially offset by improved operating leverage on sales as a result of the streamlining

activities that occurred throughout 2012. These activities favorably impacted margins by approximately 70 basis points in 2012. We expect that margins will continue to improve as the impacts of the streamlining initiatives are realized, particularly when and if sales volumes increase.

Selling and Administrative Expenses

Selling and administrative (S&A) expenses were \$99.7 million in 2012, a decrease of 3.7% from \$103.5 million in 2011. 2012 S&A expenses included approximately \$5.8 million of special charges comprised primarily of a \$2.9 million charge taken as a result of increasing the forecast period on asbestos related liabilities from 5 to 10 years during the fourth quarter of 2012, as well as a charge of \$2.0 million related to the settlement of a pension obligation with the former Chief Executive Officer of the Company. 2011 results included approximately \$3.1 million of special charges primarily associated with the acceleration of compensation expense related to the change of Chief Executive Officers during the year. The overall decline in spending, excluding these charges, of \$6.8 million can be attributed primarily to a reduction of \$8.8 million of incentive and equity compensation costs due to the lower level of performance of the business in 2012 as compared to 2011. This decline was partially offset by a \$4.2 million increase in costs related to the defined benefit pension and retiree medical plans in 2012 as compared to 2011 as the projected long term liability on the benefit plans increased as a result of unfavorable market conditions. Excluding these charges, S&A as a percentage of sales increased slightly from 18.2% in 2011 to 18.7% in 2012, mainly due to the decline in sales volumes experienced during 2012, partially offset by cost savings from our streamlining initiatives, which did not fully impact results until the second half of 2012.

Research and Development Expenses

Research and development (R&D) expenses were \$19.3 million in 2012, a decrease of 10.3%, from \$21.5 million in 2011. As a percentage of sales, R&D expenses were 3.9% in 2012 and 3.9% in 2011. Historically, we have targeted a 6% R&D investment as a percentage of net sales; however, in the past few years these percentages have been in the 3.5% - 4.0% range. Going forward, we intend to increase the investment in R&D initiatives, and believe that we will migrate closer to the 6% target over the course of time. R&D will continue to be an important driver to growth for the Company. We intend to reinvest in this area to improve our existing technologies and find new applications for existing materials, as well as to explore new, emerging technologies that we believe will complement or extend our existing product portfolio.

Restructuring and Impairment Charges

Restructuring and impairment charges were \$14.1 million in 2012 as compared to \$0.4 million in 2011. In 2012, these charges were comprised primarily of the following: (i) \$7.1 million in severance related charges resulting from the streamlining initiatives that took place throughout the year, including the early retirement program implemented in the first quarter of 2012; (ii) approximately \$2.3 million related to the shut-down of the Bremen manufacturing facility in Germany and relocation of certain production to the manufacturing facility in Carol Stream, Illinois; and (iii) \$3.8 million in severance related charges resulting from actions taken to move of the final inspection operations of Curamik from Germany to Hungary. The 2011 charge relates to the write down to fair value of a dormant facility located in Richmond, Virginia. This facility was sold in the second quarter of 2012.

Equity Income in Unconsolidated Joint Ventures

Equity income in unconsolidated joint ventures was \$4.7 million in 2012, a decrease of 13.0% from \$5.5 million in 2011. The decline was driven primarily by the softening in certain domestic and export markets in Japan, particularly in LCD televisions, domestic mobile phones and general industrial applications.

Other Income (Expense), Net

Other income (expense), net was an expense of \$0.2 million in 2012 and income of \$1.9 million in 2011. The 2011 results included a gain of \$1.9 million on the sale of a building in China. Excluding this gain, results were relatively consistent year over year.

Realized Gain (Loss)

Realized gain (loss) represents the portion of the auction rate security impairment that relates to credit losses and is required to be recorded in the consolidated statements of income (loss). The amount of loss recognized in 2012 was \$3.2 million as compared to a loss of \$0.2 million in 2011. The increase in the loss in 2012 is due to the liquidation of the auction rate securities portfolio in the first quarter of 2012, which resulted in the Company receiving net cash proceeds of approximately \$25.4 million.

Interest Income (Expense), Net

Interest income (expense), net was an expense of \$4.3 million in 2012 as compared to an expense of \$4.9 million in 2011. This expense relates to the interest expense on our long-term debt, as well as the interest expense on the long term obligation related to the leased facility in Eschenbach, Germany that contains most of the Curamik manufacturing operations. The overall decline in the expense is driven by a decline in the long term debt during 2012, as we paid down the facilities by \$24.5 million from \$122.5 million at December 31, 2011 to \$98.0 million at December 31, 2012.

Income Tax Expense (Benefit)

Our effective tax rate was (205.2%) in 2012 and 20.7% in 2011. In both 2012 and 2011, our tax rate was favorably impacted by the tax benefit associated with certain discrete rate items recorded during the year and also benefited from favorable tax rates on certain foreign business activity. In 2012, the rate was primarily impacted by the following items: (i) 232.5% benefit related to the reversal of the valuation allowance on the U.S. deferred tax assets; and (ii) 16.1% benefit related to foreign source income which is taxed at lower rates than income generated in the U.S. In 2011, the rate was primarily impacted by the following items: (i) 8.3% benefit related to the international tax rate differential; (ii) 3.6% benefit related to changes in the valuation allowance on the U.S. deferred tax assets; (iii) 1.8% benefit related to foreign source income that is taxed at lower rates than income generated in the U.S.; and (iv) 1.5% benefit from other general business credits.

In 2009, we established a valuation allowance against substantially all of our U.S. deferred tax assets as we concluded that we did not have sufficient evidence to support the position that these assets would be utilized in the future. This conclusion was reached primarily due to the presence of recent cumulative losses in the U.S. and upon consideration of all other available evidence, both positive and negative, using a “more likely than not standard” in accordance with applicable accounting guidance. As of the end of the third quarter of 2012, we concluded that a valuation allowance against these assets is no longer necessary as we are no longer in, nor are we expecting to be in, a cumulative loss in the foreseeable future. Also, in appropriate circumstances we have the opportunity to undertake a tax planning strategy to ensure that our deferred tax assets do not expire unutilized. This strategy is based upon our ability to make a tax election to capitalize certain expenses that will result in generating taxable income to allow us to utilize our deferred tax assets before they expire. We would undertake such a strategy to realize these deferred tax assets prior to expiration only if we determined it was reasonable, prudent, and feasible. This, along with other positive evidence, such as our recent history of positive taxable income, led us to conclude in 2012 that it is more likely than not that we will ultimately be able to realize our deferred tax assets.

In 2012, we incurred a \$2.0 million net operating loss for German income tax purposes. Under German law, tax losses may be carried forward indefinitely. We also incurred a \$1.0 million net operating loss in one of our Chinese entities which has a 5 year life. We believe that we will generate sufficient taxable income in both jurisdictions such that both of these carryforwards should be fully realized.

Further, our effective tax rate benefited from the tax holiday on the earnings of our subsidiaries in China, which expired at the end of 2011. Under the business license agreement granted to Rogers Technologies (Suzhou) Company (RSZ), a wholly-owned subsidiary of ours, the first two years of cumulatively profitable operations were taxed at a zero percent tax rate followed by a reduced tax rate in subsequent years that gradually increased to the 25% full rate of tax beginning in 2012. In 2012, RSZ reported pretax income of \$19.4 million which was subject to the full tax rate of 25%. In 2011, RSZ reported pretax income of \$17.9 million, which was subject to a reduced tax rate of 24%. Also, under the business license agreement granted to Rogers (Shanghai) International Trading Company Ltd. (RSH), also a wholly-owned subsidiary of ours, RSH was subject to a reduced rate of tax that gradually increased to the 25% full rate of tax beginning in 2012. In 2012, RSH reported pretax income of \$1.5 million which was subject to the full tax

rate of 25%. In 2011, RSH reported pretax income of \$2.4 million which was subject to a reduced tax rate of 24%.

Backlog

The backlog of firm orders was \$43.3 million at December 31, 2012, as compared to \$33.1 million at December 31, 2011. The increase at the end of 2012 was primarily related to the Power Electronics Solutions operating segment, which experienced an increase in backlog of \$10.7 million at December 31, 2012 as compared to December 31, 2011.

Segment Sales and Operations

Core Strategic

High Performance Foams

(Dollars in millions)

	2013	2012	2011
Net sales	\$168.1	\$179.4	\$177.6
Operating income (loss)	22.3	25.7	28.3

The High Performance Foams (HPF) operating segment is comprised of polyurethane and silicone foam products, which are sold into a wide variety of markets for diverse applications such as portable communications, consumer electronics and mass transit markets for gaskets, sealing, and cushioning applications.

2013 vs. 2012 - Net sales decreased by 6.3% from \$179.4 million in 2012 to \$168.1 million in 2013. This decline in net sales was driven primarily by a 12.7% decline in net sales into the mobile internet device market, as market dynamics negatively impacted volumes. Specifically, the introduction of smaller tablet devices, material utilization improvements by our customers, a shift in market share within our customer base, and the adoption of new technologies allowing thinner form factors all contributed to the declines in this rapidly changing market. The decrease was partially offset by a 1.4% increase into the consumer and general industrial markets, where demand remained strong for our foam products.

Operating income declined by 13.2% from \$25.7 million in 2012 to \$22.3 million in 2013. 2013 results included approximately \$3.3 million of special charges comprised primarily of \$1.5 million in severance charges and a \$1.6 million allocation related to the impairment of the Solicore investment. 2012 results included approximately \$7.8 million of special charges, including \$3.2 million related to the shutdown of the silicone foams manufacturing facility in Bremen, Germany, \$2.2 million of net severance related charges as a result of our streamlining initiatives, \$0.7 million in allocated pension settlement charges (as further described in the "Selling and Administrative Expenses" section above) and \$1.0 million of allocated asbestos charges (as further described in in the "Selling and Administrative Expenses" section above). Excluding these special charges, operating income decreased by approximately 23.4% from \$33.5 million in 2012 to \$25.7 million in 2013. As a percentage of sales, excluding special charges, 2013 operating income was 15.2%, a 350 basis point decline as compared to the 18.7% achieved in 2012. This decline is primarily attributable to the lower sales volumes in the mobile internet device market, partially offset by improved operating leverage as a result of the streamlining initiatives that began in 2012.

2012 vs. 2011 - Net sales increased by 1.0% from \$177.6 million in 2011 to \$179.4 million in 2012. This improvement was driven by strong sales of the segment's newest product introduction, PORON® XRD® extreme impact materials for molded applications, which added \$3.2 million in incremental sales in 2012, as well as a 10.8% improvement in sales into general industrial applications, including protective cases for mobile internet devices and automotive and hybrid electric vehicles. These increases were partially offset by lower sales into the wind and solar markets, which declined 40.9% in 2012 as compared to 2011.

Operating income declined by 8.7% from \$28.3 million in 2011 to \$25.8 million in 2012. 2012 results included approximately \$7.8 million of special charges, including \$3.2 million related to the shutdown of the silicone foams manufacturing facility in Bremen, Germany, \$2.2 million of net severance related charges as a result of our streamlining initiatives, \$0.7 million in allocated pension settlement charges (as further described in the "Selling and Administrative Expenses" section above) and \$1.0 million of allocated asbestos charges (as further described in in the "Selling and Administrative Expenses" section above). 2011 results included approximately \$1.6 million of special charges primarily associated with its allocated portion of the acceleration of compensation expense related to the change of Chief Executive Officers during the year. Excluding these special charges, operating income increased by approximately 12.0% from 2011 to 2012 on a 1.0% increase in sales due in part to lower costs as a result of the streamlining initiatives, which created better operating leverage on lower sales volumes, as well as an overall favorable sales mix. These favorable results were partially offset by approximately \$1.1 million of incremental costs incurred in 2012 as compared to 2011 related to the startup of the PORON® XRD® molded foam product line.

Printed Circuit Materials

(Dollars in millions)

	2013	2012	2011
Net sales	\$184.9	\$161.9	\$166.4
Operating income (loss)	18.8	8.2	11.1

The Printed Circuit Materials (PCM) operating segment is comprised of high frequency circuit material products used for making circuitry that receive, process and transmit high frequency communications signals, in a wide variety of markets and applications, including wireless communications, high reliability, and automotive, among others.

2013 vs. 2012- Net sales in 2013 were \$184.9 million, an increase of 14.2% from \$161.9 million in 2012. The increase in net sales is due primarily to strong demand for PCM materials in mobile internet device applications, which experienced a 176.9% increase in 2013 as compared to 2012, as manufacturers expand the use of our materials in their devices in areas such as antennas. Further, demand in automotive radar applications for Advanced Driver Assistance Systems (ADAS) increased by 74.8% year over year as auto manufacturers continue to adopt this safety feature into their designs. We also experienced a 9.9% year over year increase in net sales for power amplifiers in the base station market driven by the continued global roll-out of 4G-LTE, particularly in China.

Operating income improved to \$18.8 million in 2013 as compared to \$8.2 million in 2012. 2013 operating income included approximately \$2.8 million of special charges comprised primarily of \$1.0 million in severance charges and \$1.6 million allocation related to the impairment of the Solicore investment. 2012 operating income included approximately \$2.3 million of net special charges comprised primarily of \$2.9 million in severance charges incurred as part of our overall streamlining initiatives, \$0.6 million in charges related to pension settlement accounting (as further described in the "Selling and Administrative Expenses" section above), \$0.9 million of allocated asbestos charges (as further described in in the "Selling and Administrative Expenses" section above) and \$0.5 million of other special charges; partially offset by a one-time benefit of \$2.1 million related to inventory valuation adjustments and \$0.5 million related to an insurance reimbursement of a previously settled product liability claim. Excluding these special charges, operating income improved from \$10.4 million in 2012 to \$21.6 million in 2013. As a percentage of sales, excluding special charges, 2013 operating income was 11.7%, a 520 basis point improvement as compared to the 6.5% achieved in 2012. This significant improvement was driven by the strong volume increases achieved in this operating segment, as well as the overall improvement in operating leverage driven by the streamlining initiatives that began in 2012.

2012 vs. 2011 - Net sales in 2012 were \$161.9 million, a decline of 2.7% from \$166.4 million in 2011. The decline was due primarily to a 19.7% decline in sales into high reliability applications, as well as a 21.1% decline into the satellite TV market for LNB (Low Noise Blockdown) converters. These declines were partially offset by a 72.5% increase in sales into the automotive market primarily for radar safety sensor applications, as our laminate products continue to gain traction in the market, as well as a 73.2% increase in sales in new base station antenna applications for communications infrastructure.

Operating income declined by 26.1% from \$11.1 million in 2011 to \$8.2 million in 2012. 2012 results included approximately \$2.3 million of net special charges comprised primarily of \$2.9 million in severance charges incurred as part of our overall streamlining initiatives, \$0.6 million in charges related to pension settlement accounting (as further described in the "Selling and Administrative Expenses" section above), \$0.9 million of allocated asbestos charges (as further described in in the "Selling and Administrative Expenses" section above) and \$0.5 million of other special charges. These charges were partially offset by a one-time benefit of \$2.1 million related to inventory valuation adjustments and \$0.5 million related to an insurance reimbursement of a previously settled product liability claim. 2011 results included approximately \$1.1 million of special charges primarily associated with its allocated portion of the acceleration of compensation expense related to the change of Chief Executive Officers during the year. Excluding these special charges, operating income decreased by approximately 13.6% from \$12.2 million in 2011 to \$10.5 million in 2012. This decline is primarily attributable to the decline in sales volumes, as well as the impact from the 15.9% decrease in inventory during the year. These declines were partially offset by lower spending as a result of our streamlining initiatives.

Power Electronics Solutions

(Dollars in millions)

	2013	2012	2011
Net sales	\$160.7	\$134.3	\$180.2
Operating income (loss)	1.1	(12.1) 11.3

The Power Electronics Solutions (PES) operating segment is comprised of two product lines - Curamik direct-bonded copper (DBC) substrates that are used primarily in the design of intelligent power management devices, such as IGBT (insulated gate

bipolar transistor) modules that enable a wide range of products including highly efficient industrial motor drives, wind and solar energy converters and electrical systems in automobiles, and RO-LINX® busbars that are used primarily in power distribution systems products in mass transit and clean technology applications.

2013 vs. 2012- Net sales increased by 19.7% from \$134.3 million in 2012 to \$160.7 million in 2013. This significant recovery in net sales was driven primarily by a 28.4% increase in net sales into clean technology applications with strength across a number of markets, including hybrid and electric vehicles (89.9% increase), solar and wind applications (38.9% increase), and industrial motor drives (9.6% increase). 2013 results highlighted the recovery we have been anticipating in this operating segment since the significant downturns experienced in 2012. We expect the growth rate experienced in 2013 to normalize going forward considering the significant levels of recovery that occurred during 2013 after the recessionary decline experienced in 2012.

Operating results improved from an operating loss of \$12.1 million in 2012 to operating income of \$1.1 million in 2013. 2013 results included approximately \$6.1 million of special charges comprised primarily of \$3.8 million of severance related charges, a \$1.2 million allocation related to the impairment of the Solicore investment, and \$1.1 million related to the start up of inspecting operations in Hungary. 2012 results included approximately \$9.2 million of special charges consisting primarily of \$6.0 million of severance and related compensation charges, \$0.8 million of allocated asbestos costs, and \$0.7 million of charges related to the shutdown of manufacturing operations in North America. Excluding these charges, PES operating results improved from a loss of \$2.8 million in 2012 to income of \$7.2 million in 2013. As a percentage of sales, excluding special charges, 2013 operating income was 4.4%, a 650 basis point improvement as compared to the (2.1)% operating loss in 2012. These improvements were driven by the significant volume increases achieved in this operating segment, as well as the overall improvement in operating leverage driven by the streamlining initiatives that began in 2012.

2012 vs. 2011- Net sales declined by 25.4% from \$180.2 million in 2011 to \$134.3 million in 2012. This decline was primarily due to a decline in demand in the renewable energy market, particularly in Europe and Asia, as investment in these industries significantly declined during the year. Also contributing to the decline were lower demand in both industrial motor drive applications, as well as a significant slowdown in spending on infrastructure projects in the mass transit market and industrial motor drive applications in 2012 as compared to 2011. These declines were partially offset by strong sales into the mass transit and automotive markets in North America, which increased in total by 88.4% in 2012 as compared to 2011. Early in the third quarter of 2012, we announced a plan to relocate the final inspection operations from our facility in Eschenbach, Germany to Hungary. The move, which was completed in 2013, is expected to enable more cost effective performance of the inspecting operations.

Operating results declined significantly from operating income of \$11.3 million in 2011 to an operating loss of \$12.1 million in 2012. 2012 results included approximately \$9.2 million of special charges consisting primarily of \$6.0 million of severance and related compensation charges, \$0.8 million of allocated asbestos costs, and \$0.7 million of charges related to the shutdown of manufacturing operations in North America. Excluding these charges, PES operating loss in 2012 was \$2.9 million. This decline in operating performance was due primarily to the lost contribution related to the decline in net sales volumes, partially offset by lower spending as a result of our streamlining initiatives.

Other

(Dollars in millions)

	2013	2012	2011
Net sales	\$23.7	\$23.2	\$24.0
Operating income (loss)	7.1	3.8	2.7

Our Other reportable segment consists of our elastomer rollers and float products, as well as the inverter distribution business.

In the second quarter of 2012, we ceased production of non-woven composite materials products and, in the fourth quarter of 2011, we ceased operations of the Thermal Management Solutions (TMS) operating segment. These operating segments are being treated as discontinued operations and their results are no longer included in this reportable segment. All prior periods have been recast to reflect such changes.

2013 vs 2012- Net sales increased by 2.4% from \$23.2 million in 2012 to \$23.7 million in 2013. The increase in net sales is due primarily to a 6.7% increase in net sales of elastomer component and float products, partially offset by a 25.7% decline in net sales of inverter products from our legacy Durel business.

Operating results improved by 86.6% from \$3.8 million in operating profit in 2012 to \$7.1 million in operating profit in 2013. 2013 results included approximately \$0.4 million of special charges related primarily to this segment's allocated portion of the Solicore impairment charge and severance charges. 2012 results included approximately \$0.5 million of special charges related primarily to allocated severance and pension settlement related costs. Excluding these special charges, operating income improved from \$4.3 million in 2012 to \$7.4 million in 2013. As a percentage of sales, excluding special charges, 2013 operating income

was 31.4%, a 1,300 basis point improvement as compared to the 18.4% achieved in 2012. This significant improvement was driven by the overall improvement in operating leverage driven by the streamlining initiatives that began in 2012.

2012 vs. 2011 - Net sales declined 3.3% from \$24.0 million 2011 to \$23.2 million 2012. The decline in sales is primarily due to a 45.4% decline in sales of inverter products from our legacy Durel business; which was partially offset by a 9.1% increase in sales of elastomer component and float products.

Operating results improved by 40.7% from an operating profit of \$2.7 million in 2011 to \$3.8 million in 2012. 2012 results included approximately \$0.5 million of special charges related primarily to allocated severance and pension settlement related costs. The improvement in operating profit is due primarily to the operating performance of the elastomer component and float products, which improved by 123.6% due to increased volumes and other cost reduction initiatives.

Joint Ventures

Rogers INOAC Corporation (RIC)

RIC, our joint venture with Japan-based INOAC Corporation, was established over 29 years ago and manufactures high performance PORON urethane foam materials in Japan. 2013 net sales declined by approximately 21.5% as compared to 2012. Approximately 17.2 percentage points of this decline relates to the appreciation of the Japanese Yen against the U.S. dollar as the currency value significantly changed during the period. Excluding the impact of the currency change, net sales declined by approximately 4.4% year over year primarily due to the continued weakness in the Japanese domestic and export markets, particularly LCD TV's, domestic mobile phones and general industrial applications. Sales were relatively flat from 2011 to 2012.

Rogers INOAC Suzhou Corporation (RIS)

RIS, our joint venture agreement with INOAC Corporation for the purpose of manufacturing PORON urethane foam materials in China, began operations in 2004. Net sales declined by approximately 10.4% from 2012 to 2013 and decreased approximately 15.0% from 2011 to 2012. The decline in both of these periods is primarily related to design changes in the mobile internet device market that negatively impacted volumes.

Discontinued Operations

In the fourth quarter of 2011, we made the strategic decision to end the operations of our Thermal Management Solutions operating segment. We had invested in its operations for the previous few years, but had difficulty gaining traction in the market and working through issues in the manufacturing process. Therefore, we determined that we would not achieve future success in this operation and chose to shut down operations rather than invest further. There was no activity for this segment in 2013. In 2012 and 2011, operating losses of \$0.1 million and \$6.8 million, net of tax, respectively, were reflected as discontinued operations in the accompanying consolidated statements of income (loss). Net sales associated with the discontinued operations for 2012 and 2011 were \$0.1 million and \$0.9 million, respectively. The tax related to the discontinued operations was de minimus for 2013 and 2012 and \$0.1 million for 2011.

In the second quarter of 2012, we decided to cease production of our non-woven composite materials operating segment located in Rogers, Connecticut. Sales of non-woven products had been steadily declining for several years and totaled approximately \$5.3 million and \$4.8 million in 2012 and 2011, respectively. Manufacturing operations ceased by the end of 2012 and last sales out of inventory occurred in the first quarter of 2013. In 2013, an operating loss of \$0.1 million, net of tax, was reflected as discontinued operations in the accompanying consolidated statement of income (loss), net sales were \$0.2 million, and tax related to the discontinued operation was \$0.1 million. In 2012 and 2011, operating losses of \$0.1 million and \$0.4 million, net of tax, respectively, were reflected as discontinued

operations in the accompanying consolidated statements of income (loss). The tax related to the discontinued operations was \$0.1 million and \$0.2 million in 2012 and 2011, respectively.

Product and Market Development

Our research and development team is dedicated to growing our business by developing cost effective solutions that improve the performance of customers' products and by identifying business and technology acquisition opportunities to expand our market presence. Currently, R&D spend is approximately 4% of net sales, however, our long term strategic plan is to invest up to 6% in R&D activities as we work to grow the Company both organically and through external investments.

Liquidity, Capital Resources and Financial Position

We believe our ability to generate cash from operations to reinvest in our business is one of our fundamental strengths. We believe our existing sources of liquidity and cash flows expected to be generated from operations, together with available credit facilities, will be sufficient to fund our operations, capital expenditures, research and development efforts, and debt service commitments, as well as our other operating and investing needs, for at least the next twelve months and, we believe, well into the foreseeable future. We continue to have access to the remaining portion of the line of credit available under the Amended Credit Agreement (as defined in the Credit Facilities section which follows), should any issue or strategic opportunities arise. We continually review and evaluate the adequacy of our cash flows, borrowing facilities and banking relationships to ensure that we have the appropriate access to cash to fund both near-term operating needs and long-term strategic initiatives.

(Dollars in thousands)

Key Balance Sheet Accounts:	December 31, 2013	December 31, 2012
Cash and cash equivalents	\$191,884	\$114,863
Accounts receivable	85,126	78,788
Inventory	66,889	73,178
Outstanding borrowing on credit facilities (short term and long term)	77,500	98,000

(Dollars in thousands)

Key Cash Flow Measures:	December 31, 2013	December 31, 2012
Cash provided by (used in) operating activities of continuing operations	\$77,167	40,367
Cash provided by (used in) investing activities of continuing operations	(16,979) 1,368
Cash provided by (used in) financing activities of continuing operations	10,657	(8,455

At December 31, 2013, cash and cash equivalents were \$191.9 million as compared to \$114.9 million at the end of 2012, an increase of \$77.0 million, or approximately 67.1%. This increase was due primarily to strong cash generated from operations, in addition to \$32.4 million received from stock option exercises. These increases in cash were partially offset by cash outlays of \$13.0 million in contributions to our defined benefit pension plan; \$20.5 million of payments on our debt facility, and \$16.9 million in capital expenditures.

The following table illustrates the location of our cash and cash equivalents by our three major geographic areas as of the periods indicated:

(Dollars in thousands)	2013	2012	2011
U.S.	\$40,058	\$26,813	\$20,027
Europe	93,764	47,918	35,259
Asia	58,062	40,132	24,442
Total cash and cash equivalents	\$191,884	\$114,863	\$79,728

Cash held in certain foreign locations could be subject to additional taxes if we were to repatriate such amounts back to the U.S. Our current policy is that the historical earnings and cash in these locations will be permanently reinvested

in those foreign locations.

Working capital was \$287.7 million, \$221.7 million and \$186.2 million in 2013, 2012 and 2011, respectively.

39

Significant changes in our balance sheet accounts from December 31, 2012 to December 31, 2013 are as follows: Inventories decreased \$6.3 million, or 8.4%, from \$73.2 million at December 31, 2012 to \$66.9 million at December 31, 2013. This decrease is primarily attributable to our focus on working capital management and lowering inventory levels to better match current demand, as well as our ability to manage our demand in a period of increasing sales volumes.

Long-term asbestos-related insurance receivables increased from \$40.1 million at December 31, 2012 to \$49.5 million at December 31, 2013 and long-term asbestos-related liabilities increased from \$43.2 million at December 31, 2012 to \$52.2 million at December 31, 2013. These increases were driven by the most recent long term asbestos forecast that was developed during the fourth quarter of 2013.

Overall, our debt position declined by \$20.5 million from \$98.0 million at December 31, 2012 to \$77.5 million at December 31, 2013 due to payments made on the facilities during 2013. Debt payments included an \$8.0 million discretionary payment on the revolving line of credit.

During 2013, \$17.0 million of net cash was used for investing activities as compared to \$1.4 million of net cash provided by investing activities in 2012 and \$145.8 million of net cash used in investing activities in 2011. The investing activities in 2012 included liquidating our auction rate security portfolio which resulted in net proceeds of approximately \$25.4 million. For 2011, investing activities included the acquisition of Curamik, net of cash acquired, for \$139.8 million. Capital expenditures were \$16.9 million, \$23.8 million and \$21.3 million in 2013, 2012 and 2011, respectively.

Net cash provided by financing activities was \$10.7 million in 2013, \$8.5 million used in financing activities in 2012 and net cash provided by financing activities were \$128.3 million in 2011. 2011 was impacted by the initial draw on the line of credit for \$145.0 million to fund the acquisition of Curamik.

Credit Facilities

On July 13, 2011, we entered into an amended and restated \$265 million secured five year credit agreement. This credit agreement (“Amended Credit Agreement”) is with (i) JPMorgan Chase Bank, N.A., as administrative agent; (ii) HSBC Bank USA, National Association; (iii) RBS Citizens, National Association; (iv) Fifth Third Bank; and (v) Citibank, N.A. JPMorgan Securities LLC and HSBC Bank USA, National Association acted as joint bookrunners and joint lead arrangers; HSBC Bank USA, National Association and RBS Citizens, National Association acted as co-syndication agents; and Fifth Third Bank and Citibank, N.A. acted as co-documentation agents. The Amended Credit Agreement amends and restates the credit agreement signed between the Company and the same banks on November 23, 2010 and increased our borrowing capacity from \$165.0 million under the original agreement to \$265.0 million under the Amended Credit Agreement.

Key features of the Amended Credit Agreement, as compared to the November 23, 2010 credit agreement, include an increase in credit from \$165.0 million to \$265.0 million with the addition of a \$100.0 million term loan; the extension of maturity from November 23, 2014 to July 13, 2016; a 25 basis point reduction in interest costs; an increase in the size of permitted acquisitions from \$25.0 million to \$100.0 million; and an increase in permitted additional indebtedness from \$20.0 million to \$120.0 million.

The Amended Credit Agreement provides for the extension of credit in the form of a \$100.0 million term loan (which refinances outstanding borrowings in the amount of \$100.0 million from the existing revolving credit line), as further described below; and up to \$165.0 million of revolving loans, in multiple currencies, at any time and from time to time until the maturity of the Amended Credit Agreement on July 13, 2016. We may borrow, pre-pay and re-borrow amounts under the \$165.0 million revolving portion of the Amended Credit Agreement; however, with respect to the \$100.0 million term loan portion, any principal amounts re-paid may not be re-borrowed. Borrowings may be used to finance working capital needs, for letters of credit and for general corporate purposes in the ordinary course of business, including the financing of permitted acquisitions (as defined in the Amended Credit Agreement).

Borrowings under the Amended Credit Agreement bear interest based on one of two options. Alternate base rate loans bear interest that includes a base reference rate plus a spread of 75 - 150 basis points, depending on our leverage ratio. The base reference rate is the greater of the prime rate; federal funds effective rate plus 50 basis points; and

adjusted London interbank offered (“LIBO”) rate plus 100 basis points. Euro-currency loans bear interest based on the adjusted LIBO rate plus a spread of 175 - 250 basis points, depending on our leverage ratio. Our current borrowings are Euro-currency based.

In addition to interest payable on the principal amount of indebtedness outstanding from time to time under the Amended Credit Agreement, the Company is required to pay a quarterly fee of 0.20% to 0.35% (based upon its leverage ratio) on the unused amount of the lenders’ commitments under the Amended Credit Agreement.

In connection with the Amended Credit Agreement, we transferred borrowings in the amount of \$100.0 million from the revolving credit line under the November 23, 2010 credit agreement to the term loan under the Amended Credit Agreement. The Amended Credit Agreement requires the mandatory quarterly repayment of principal on amounts borrowed under such term loan. Payments commenced on September 30, 2011, and are scheduled to be completed on June 30, 2016. The aggregate mandatory principal payments under the Amended Credit Agreement are as follows:

2011	\$2.5	million
2012	\$7.5	million
2013	\$12.5	million
2014	\$17.5	million
2015	\$35.0	million
2016	\$25.0	million

The Amended Credit Agreement is secured by many of the assets of Rogers and our World Properties, Inc, subsidiary, including but not limited to, receivables, equipment, intellectual property, inventory, stock in certain subsidiaries and real property.

As part of the Amended Credit Agreement, we are restricted in our ability to perform certain actions, including, but not limited to, our ability to pay dividends, incur additional debt, sell certain assets, and make capital expenditures, with certain exceptions. Further, we are required to maintain certain financial covenant ratios, including (i) a leverage ratio of no more than 3.0 to 1.0 and (ii) a minimum fixed charge coverage ratio (FCCR) as defined in the following table:

Period	Ratio
March 31, 2012 to December 31, 2012	1.25 : 1.00
March 31, 2013 to December 31, 2013	1.50 : 1.00
March 31, 2014 and thereafter	1.75 : 1.00

The FCCR is the ratio between Adjusted Earnings Before Interest Taxes Depreciation and Amortization (EBITDA) and Consolidated Fixed Charges as defined in the Amended Credit Agreement, which measures our ability to cover the fixed charge obligations. The key components of Consolidated Fixed Charges are capital expenditures, scheduled debt payments, capital lease payments, rent and interest expenses.

Fixed Charge metrics are detailed in the table below:

Periods	Q4 2012	Q1 2013	Q2 2013	Q3 2013	Q4 2013
Covenant Limit (minimum)	1.25	1.50	1.50	1.50	1.50
Actual FCCR	2.18	2.27	2.06	2.23	2.39

As of December 31, 2013, we were in compliance with all of our covenants, as we achieved actual ratios of approximately 1.00 on the leverage ratio and 2.39 on the fixed charge coverage ratio.

If an event of default occurs, the lenders may, among other things, terminate their commitments and declare all outstanding borrowings to be immediately due and payable together with accrued interest and fees.

In connection with the establishment of the initial credit agreement in 2010, we capitalized approximately \$1.6 million of debt issuance costs. We capitalized an additional \$0.7 million of debt issuance costs in 2011 related to the Amended Credit Agreement, as amended. Also, in connection with the Amended Credit Agreement, as amended, we capitalized an additional \$0.1 million of debt issuance costs in 2012. These costs will be amortized over the life of the Amended Credit Agreement, as amended, which will terminate in June 2016.

We incurred amortization expense of \$0.5 million, \$0.5 million, and \$0.5 million for the years ended 2013, 2012 and 2011, respectively. At December 31, 2013, we have approximately \$1.3 million of credit facility costs remaining to be amortized.

In the first quarter of 2011, we made an initial draw on the line of credit of \$145.0 million to fund the acquisition of Curamik. During 2013 and 2012, we made principal payments of \$20.5 million and \$24.5 million, respectively, on

the outstanding debt. The 2013 payments included a \$8.0 million payment on the revolving credit line, which paid the remaining balance of the revolving credit line.

We are obligated to pay \$17.5 million on the term loan obligation in 2014. As of December 31, 2013, the outstanding debt related to the Amended Credit Agreement, as amended, consists of \$77.5 million of term loan debt. We have the option to pay part of or

the entire amount at any time over the remaining life of the Amended Credit Agreement, as amended, with any balance due and payable at the agreement's expiration.

In addition, as of December 31, 2013, we had the following standby letter of credit (LOC) that was backed by the Amended Credit Agreement, as amended:

\$1.4 million letter of credit to guarantee Rogers workers compensation plan;

We also guarantee an interest rate swap related to the lease of the Curamik manufacturing facility in Eschenbach, Germany. The swap agreement is between the lessor, our Curamik subsidiary, and a third party bank. We guarantee any liability related to the swap agreement in case of default by the lessor through the term of the swap until expiration in July 2016, or if we exercised the option to buyout the lease at June 30, 2013 as specified within the lease agreement. We did not exercise our option to buyout the lease at June 30, 2013. The swap is in a liability position with the bank at December 31, 2013, and has a fair value of \$0.7 million. We have concluded that the probability of default by the lessor is not probable during the term of the swap, and we chose not to exercise the option to buyout the lease during the leasing period; therefore, we believe the guarantee has no value.

Capital Lease

During the first quarter of 2011, we recorded a capital lease obligation related to the acquisition of Curamik for its primary manufacturing facility in Eschenbach, Germany. Under the terms of the leasing agreement, we had an option to purchase the property in either 2013 or upon the expiration of the lease in 2021 at a price which is the greater of (i) the then-current market value or (ii) the residual book value of the land including the buildings and installations thereon. We chose not to exercise the option to purchase the property that was available to us on June 30, 2013. The total obligation recorded for the lease as of December 31, 2013 and 2012 was \$8.0 million and \$8.4 million, respectively. Depreciation expense related to the capital lease was \$0.4 million, \$0.4 million and \$0.4 million for the years ending December 31, 2013, 2012 and 2011, respectively. Accumulated depreciation as of December 31, 2013 and 2012 was \$1.2 million and \$0.8 million, respectively.

These expenses are included as depreciation expense in Cost of Sales on our consolidated statements of income (loss). Interest expense related to the debt recorded on the capital lease is included in interest expense on the consolidated statements of income (loss). See "Interest" section below for further discussion.

Interest

We incurred interest expense on our outstanding debt of \$2.2 million, \$2.9 million and \$3.8 million for the years ended December 31, 2013, 2012 and 2011, respectively. We incurred an unused commitment fee of approximately \$0.5 million, \$0.4 million, and \$0.2 million for the years ended December 31, 2013, 2012, and 2011, respectively. In July 2012, we entered into an interest rate swap to hedge the variable interest rate on 65% of the term loan debt, then outstanding, effective through July 2013. At December 31, 2013, our outstanding debt balance is only made up of the term loan debt which is \$77.5 million. At December 31, 2013, the rate charged on this debt is the 1 month LIBOR at 0.1875% plus a spread of 2.00%.

We also incurred interest expense on the capital lease of \$0.5 million, \$0.6 million and \$1.0 million for the years ended December 31, 2013, 2012 and 2011, respectively. Cash paid for interest was \$3.1 million, \$4.0 million and \$4.2 million for 2013, 2012 and 2011, respectively.

Auction Rate Securities

During the first quarter of 2012, we liquidated our auction rate securities portfolio, receiving net proceeds of \$25.4 million on a stated par value of \$29.5 million. As a result of this liquidation, we recognized a loss on the discount of the securities of \$3.2 million (the remaining difference between the liquidation proceeds and par value of \$0.9 million had previously been recognized as an impairment loss). Since the markets for these securities failed in the first quarter of 2008, we had already redeemed \$24.9 million of these securities, mostly at par. However, due to the fact that par value redemptions had recently slowed with no clear path for full redemption over the next several years and the rate of return on these securities was very low, management determined that a discounted redemption of the remainder of the portfolio was in the best financial interests of the Company.

Contractual Obligations

The following table summarizes our significant contractual obligations as of December 31, 2013:

(Dollars in thousands)	Payments Due by Period				
	Total	Less than 1 Year	1-3 Years	3-5 Years	More than 5 Years
Operating leases	\$4,565	\$1,938	\$1,936	\$653	\$38
Capital lease	2,924	316	685	784	1,139
Interest payments on capital lease	3,404	533	1,001	902	968
Inventory purchase obligation	132	132	—	—	—
Capital commitments	1,370	1,370	—	—	—
Pension and retiree health and life insurance benefits (1)	185,148	9,857	18,868	19,727	136,696
Outstanding borrowings on credit facilities	77,500	17,500	60,000	—	—
Interest payments on outstanding borrowings (2)	4,506	2,248	2,258	—	—
Total	\$279,549	\$33,894	\$84,748	\$22,066	\$138,841

Pension benefit payments, which amount to \$174.3 million, are expected to be paid through the utilization of (1) pension plan assets; retiree health and life insurance benefits, which amount to \$10.8 million, are expected to be paid from operating cash flows.

Estimated future interest payments are based on (1) rates that range from 0.16% to 1.51%, which take into (2) consideration projected forward 1 Month LIBO rates, (2) a leverage-based spread and (3) the related impact of the interest rate swap.

Other long-term liabilities, such as deferred taxes, unrecognized tax benefits and asbestos-related product liability reserves, have been excluded from the table due to the uncertainty of the timing of payments combined with the absence of historical trends to be used as a predictor for such payments.

Effects of Inflation

We do not believe that inflation had a material impact on our business, sales, or operating results during the periods presented.

Off-Balance Sheet Arrangements

We do not have any off-balance sheet arrangements that have, or are, in the opinion of management, reasonably likely to have, a current or future material effect on our financial condition or results of operations.

Critical Accounting Policies

Our Consolidated Financial Statements are prepared in accordance with U.S. generally accepted accounting principles, which require management to make estimates, judgments and assumptions that affect the amounts reported in the financial statements and accompanying notes. We base our estimates on historical experience and on various other assumptions that are believed to be reasonable under the circumstances and believe that appropriate reserves have been established based on reasonable methodologies and appropriate assumptions based on facts and circumstances that are known; however, actual results may differ from these estimates under different assumptions or conditions. An accounting policy is deemed to be critical if it requires an accounting estimate to be made based on assumptions that are highly judgmental and uncertain at the time the estimate is made, if different estimates could reasonably have been used, or if changes to those estimates are reasonably likely to periodically occur that could affect the amounts carried in the financial statements. These critical accounting policies are as follows:

Revenue Recognition

We recognize revenue when all of the following criteria are met: (1) we have entered into a binding agreement, (2) the product has shipped and title has passed, (3) the sales price to the customer is fixed or is determinable, and (4) collectability is reasonably assured. We recognize revenue based upon a determination that all criteria for revenue recognition have been met, which, based on the majority of our shipping terms, is considered to have occurred upon shipment of the finished product. Some shipping terms require the goods to be through customs or be received by the customer before title passes. In those instances, revenues are not recognized until either the customer has received the goods or they have passed through customs, depending on the circumstances.

As appropriate, we record estimated reductions to revenue for customer returns and allowances and warranty claims. Provisions for such allowances are made at the time of sale and are typically derived from historical trends and other relevant information.

Allowance for Doubtful Accounts

The allowance for doubtful accounts is established to represent our best estimate of the net realizable value of the outstanding accounts receivable. The allowance for doubtful accounts is determined based on a variety of factors that affect the potential collectability of receivables, including length of time receivables are past due, customer credit ratings, financial stability of customers, specific one-time events and past customer history. In addition, in circumstances when we are made aware of a specific customer's inability to meet its financial obligations, a specific allowance is established. The majority of accounts are individually evaluated on a regular basis and appropriate reserves are established as deemed appropriate based on the criteria previously mentioned. The remainder of the reserve is based on our estimates and takes into consideration historical trends, market conditions and the composition of our customer base. The risk with this estimate is associated with failure to become aware of potential collectability issues related to specific accounts and thereby becoming exposed to potential unreserved losses. Historically, our estimates and assumptions around the allowance have been reasonably accurate and we have processes and controls in place to closely monitor customers and potential credit issues. Additionally, we have credit insurance on certain accounts that mitigates some of the risk of loss. Over the past three years, our allowance as a percentage of total receivables has ranged from 1.8% to 2.7%. A 50 basis point increase in our current year allowance to receivable ratio would increase our allowance reserve by approximately \$0.4 million.

Inventory Valuation

Inventories are stated at the lower of cost or market with costs determined primarily on a first-in first-out basis. We also maintain a reserve for excess, obsolete and slow-moving inventory that is primarily developed by utilizing both specific product identification and historical product demand as the basis for our analysis. Products and materials that are specifically identified as obsolete are fully reserved. In general, most products that have been held in inventory greater than one year are fully reserved unless there are mitigating circumstances, including forecasted sales or current orders for the product. The remainder of the allowance is based on our estimates, and fluctuates with market conditions, design cycles and other economic factors. Risks associated with this allowance include unforeseen changes in business cycles that could affect the marketability of certain products and an unexpected decline in current production. We closely monitor the market place and related inventory levels and have historically maintained reasonably accurate allowance levels. In addition, we value certain inventories using the last-in, first-out (LIFO) method. Accordingly, a LIFO valuation reserve is calculated using the link chain index method and is maintained to properly value these inventories. Our obsolescence reserve has ranged from 8.6% to 11.2% of gross inventory over the last three years. A one hundred basis point increase to the December 31, 2013 obsolescence reserve would increase the reserve by approximately \$1.0 million.

Goodwill and Other Intangibles

We have made acquisitions over the years that included the recognition of goodwill and other intangible assets. Goodwill and indefinite lived intangibles are tested for impairment annually or more frequently if events or changes in circumstances indicate the carrying value may have been impaired. Application of the goodwill impairment test requires significant judgment, including the identification of reporting units, assignment of assets and liabilities to reporting units, and determination of the fair value of each reporting unit. Determining the fair value of a reporting unit is subjective and requires the use of significant estimates and assumptions, including revenue growth rates and operating margins, discount rates, and future market conditions, among others. We test goodwill for impairment using a two-step process. The first step of the impairment test requires a comparison of the implied fair value of each of our

reporting units to the respective carrying value. If the carrying value of a reporting unit is less than its implied fair value, no indication of impairment exists and a second step is not performed. If the carrying amount of a reporting unit is higher than its fair value, there is an indication that impairment may exist and a second step must be performed. In the second step, the impairment is computed by comparing the implied fair value of the reporting unit's goodwill with the carrying amount of the goodwill. If the carrying amount of the reporting unit's goodwill is greater than the implied fair value of its goodwill, an impairment loss must be recognized for the excess and charged to operations.

In 2013, we estimated the fair value of our reporting units using an income approach based on the present value of future cash flows. We believe this approach yields the most appropriate evidence of fair value as our reporting units are not easily compared to other corporations involved in similar businesses. We further believe that the assumptions and rates used in our annual impairment test are reasonable, but inherently uncertain. We currently have three reporting units with goodwill and intangible assets - High Performance Foams, Curamik and the Elastomer Components Division (ECD) and the annual impairment test was performed in the fourth quarter of 2013 as has been our historical practice. The HPF, Curamik and ECD reporting units had allocated goodwill of approximately \$24.2 million, \$82.2 million and \$2.2 million, respectively, at December 31, 2013. No impairment charges resulted from these analysis. The excess of fair value over carrying value for these reporting units was 405% for HPF, 30% for Curamik and 200% for ECD. From a sensitivity perspective, if the fair value of these reporting units declined by 10%, the fair

value of the HPF reporting unit would exceed its carrying value by approximately 355%, the fair value of the Curamik reporting unit would exceed its carrying value by approximately 17%, and the fair value of the ECD reporting unit would exceed its carrying value by approximately 170%. These valuations are based on a five year discounted cash flow analysis, which utilized a discount rates ranging from 13.0% for HPF and ECD to 14.5% for Curamik and a terminal year growth rate of 3% for all three reporting units.

Intangible assets, such as purchased technology, customer relationships, work force, and the like, are generally recorded in connection with a business acquisition. Values assigned to intangible assets are determined based on estimates and judgments regarding expectations of the success and life cycle of products and technology acquired, the value of the acquired businesses customer base, as well as the value of its existing work force, among others. These assets are reviewed at least annually, or more frequently, if facts and circumstances surrounding such assets indicate a possible impairment of the asset exists. In 2013, there were no indicators of impairment on any of our other intangible assets.

Long-Lived Assets

We review property, plant and equipment, and other long-term assets, including investments, for impairment whenever events or changes in circumstances indicate the carrying value of assets may not be recoverable. Recoverability of these assets is measured by comparison of their carrying value to future undiscounted cash flows the assets are expected to generate over their remaining economic lives. If such assets are considered to be impaired, the impairment to be recognized in earnings equals the amount by which the carrying value of the assets exceeds their market value determined by either a quoted market price, if available, or a value determined by utilizing a discounted cash flow analysis. In the future, deterioration in our business could result in additional impairment charges. Evaluation of impairment of long-lived assets requires estimates of future operating results that are used in the preparation of the expected future undiscounted cash flows. Actual future operating results and the remaining economic lives of our long-lived assets could differ from the estimates used in assessing the recoverability of these assets. These differences could result in impairment charges, which could have a material adverse impact on our results of operations. In addition, in certain instances, assets may not be impaired but their estimated useful lives may decrease. In these situations, we amortize the remaining net book values over the revised useful lives.

Environmental Contingencies

We accrue for environmental investigation, remediation, operating and maintenance costs when it is probable that a liability has been incurred and the amount can be reasonably estimated. For environmental matters, the most likely cost to be incurred is accrued based on an evaluation of currently available facts with respect to each individual site, including existing technology, current laws and regulations and prior remediation experience. For sites with multiple potential responsible parties (PRPs), we consider our likely proportionate share of the anticipated remediation costs and the ability of the other parties to fulfill their obligations in establishing a provision for those costs. Where no amount within a range of estimates is more likely to occur than another, the low end of the range is accrued. When future liabilities are determined to be reimbursable by insurance coverage, an accrual is recorded for the potential liability and a receivable is recorded for the estimated insurance reimbursement amount. We are exposed to the uncertain nature inherent in such remediation and the possibility that initial estimates will not reflect the final outcome of a matter.

Product Liability and Workers' Compensation Costs

Workers' compensation liabilities in the U.S. are recognized for claims incurred (including claims incurred but not reported) and for changes in the status of individual case reserves. At the time a workers' compensation claim is filed, a liability is estimated to settle the claim and accrued at that time. The liability for workers' compensation claims is

determined based on estimates of the nature and severity of the claims and based on analysis provided by third party administrators and by various state statutes and reserve requirements. We have developed our own trend factors based on our specific claims experience. In other countries where workers' compensation claims are applicable, we typically maintain insurance coverage with limited deductible payments. Because the liability is an estimate, the ultimate liability may be more or less than reported.

For product liability claims, we typically maintain insurance coverage with reasonable deductible levels to protect us from potential exposures. Any liability associated with such claims is based on management's best estimate of the potential claim value, while insurance receivables associated with related claims are not recorded until verified by the insurance carrier.

For asbestos related claims, we recognize projected asbestos liabilities and related insurance receivables, with any difference between the liability and related insurance receivable recognized as an expense in the consolidated statements of income (loss). In order to determine projected asbestos related liabilities, we have historically engaged National Economic Research Associates, Inc. (NERA), a consulting firm with expertise in the field of evaluating mass tort litigation asbestos bodily-injury claims. Further, in order to determine the projected insurance coverage on the asbestos liabilities, we have historically engaged Marsh USA, Inc,

also known as Marsh Risk Consulting (Marsh), to develop these projections. Projecting future asbestos costs and related insurance coverage is subject to numerous variables that are extremely difficult to predict, including the number of claims that might be received, the type and severity of the disease alleged by each claimant, the long latency period associated with asbestos exposure, dismissal rates, costs of medical treatment, the financial resources of other companies that are co-defendants in claims, uncertainties surrounding the litigation process from jurisdiction to jurisdiction and from case to case, and the impact of potential changes in legislative or judicial standards, including potential tort reform.

The models developed for determining the potential exposure and related insurance coverage were developed by outside consultants deemed to be experts in their respective fields with the forecast for asbestos related liabilities generated by NERA and the related insurance receivable projections developed by Marsh. The models contain numerous assumptions that significantly impact the results generated by the models. We believe the assumptions made are reasonable at the present time, but are subject to uncertainty based on the actual future outcome of our asbestos litigation. Historically, due to the inherent uncertainties of the forecast process and our limited amount of settlement and claims history, we utilized a forecast period of five years, which we concluded was the most reasonable period for recognizing a reserve for projected asbestos liabilities, and that costs that might be incurred after that period were not reasonably estimable at that time. In 2012, we reviewed this assumption and determined that it was appropriate to extend the forecast period from five years to ten years. We reached this conclusion due to the fact that we now have considerably more experience in addressing asbestos related lawsuits and have a longer history of activity to use as a baseline to more accurately project the liability over a longer period than previously disclosed. Also, settlement trends have become more meaningful in recent years and we believe that we now have a more meaningful history of data on which to base our projections. Further, we determined that a ten year projection period is now appropriate as, although we have a longer and more consistent history of data over the last few years, we do not believe we have sufficient data to justify a longer projection period at this time. As of December 31, 2013, the estimated liability and estimated insurance recovery for the ten-year period through 2023 was \$59.7 million and \$57.1 million, respectively. For sensitivity purposes, if the forecast period was decreased to five years, the projected liability and related insurance recovery would be \$34.9 million and \$33.6 million, respectively. Also, if the forecast period was increased to fifteen years, the projected liability and related insurance recovery would be \$77.2 million and \$73.2 million, respectively.

Given the inherent uncertainty in making future projections, we plan to have the projections of current and future asbestos claims periodically re-examined, and we will update them further if needed based on our experience, changes in the underlying assumptions that formed the basis for NERA's and Marsh's models, and other relevant factors, such as changes in the tort system. There can be no assurance that our accrued asbestos liabilities will approximate our actual asbestos-related settlement and defense costs, or that our accrued insurance recoveries will be realized. We believe that it is reasonably possible that we will incur additional charges for our asbestos liabilities and defense costs in the future, which could exceed existing reserves, but cannot reasonably estimate such excess amounts at this time.

Legal Contingencies

From time to time we are a defendant in legal matters, including those involving environmental law and product liability (as discussed in more detail above). As required by U.S. GAAP, we determine whether an amount with respect to a loss from a loss contingency should be accrued by assessing whether a loss is deemed probable and the loss amount can be reasonably estimated. Separately, we would analyze any potential insurance proceeds that would be available to offset the claim amounts. Estimates of potential outcomes of these contingencies are developed in consultation with internal and external counsel. While this assessment is based upon all available information, litigation is inherently uncertain and the ultimate outcome of such litigation could be more or less than original estimates. Final resolution of such matters could negatively effect our results of operations, cash flows and financial position.

Pension and Other Postretirement Benefits

We provide various defined benefit pension plans for our U.S. employees and sponsor three defined benefit health care plans and a life insurance plan. The costs and obligations associated with these plans are dependent upon various actuarial assumptions used in calculating such amounts. These assumptions include discount rates, salary growth, long-term rates of return on plan assets, mortality rates, and other factors. The assumptions used were determined as follows: (i) the discount rate used is based on the PruCurve high quality corporate bond index, with comparisons against other similar indices; (ii) the salary growth rate is based on our historical and projected level of salary increases; and (iii) the long-term rate of return on plan assets is determined based on historical portfolio results, market conditions and our expectations of future returns. We determine these assumptions based on consultation with outside actuaries and investment advisors. Any changes in these assumptions could have a significant impact on future recognized pension costs, assets and liabilities.

The rates used to determine our costs and obligations under our pension and postretirement plans are disclosed in Note 10 of the Consolidated Financial Statements of this Form 10-K. Each assumption has different sensitivity characteristics. For the year ended December 31, 2013, a 25 basis point decrease in the discount rate would have increased our total pension expense by

approximately \$0.3 million. This number represents the aggregate increase in expense for the three pension plans: Employees' Pension Plan, Defined Benefit Pension Plan and the Restoration Plan. A 25 basis point decrease in the discount rate would increase the other post-employment benefits (OPEB) expense by about \$10,000. A 25 basis point decrease in the expected return on assets would increase the total 2013 pension expense approximately \$0.4 million. This number represents the aggregate increase in the expense for the two qualified pension plans. Since the OPEB and Non-qualified plans are unfunded, those plans would not be impacted by this assumption change.

Income Taxes

The objective of accounting for income taxes is to recognize the amount of taxes payable or refundable for the current fiscal year and the deferred tax assets and liabilities for the future tax consequences of events that have been recognized in our Financial Statements. Deferred tax assets and liabilities reflect temporary differences between amounts of assets and liabilities for financial and tax reporting. Such amounts are adjusted, as appropriate, to reflect changes in tax rates expected to be in effect when the temporary differences reverse. We establish a valuation allowance to offset any deferred tax assets if, based upon available evidence, it is more likely than not that some or all of the deferred tax asset will not be realized. The determination of the amount of a valuation allowance to be provided on recorded deferred tax assets involves estimates regarding (i) the timing and amount of the reversal of taxable temporary differences; (ii) expected future taxable income; and (iii) the impact of tax planning strategies. In assessing the need for a valuation allowance, we consider all available positive and negative evidence, including past operating results, projections of future taxable income and the feasibility of ongoing tax planning strategies. The projections of future taxable income include a number of estimates and assumptions regarding our volume, pricing and costs. Additionally, valuation allowances related to deferred tax assets can be impacted by changes to tax laws.

Significant judgment is required in determining income tax provisions and in evaluating tax positions. We establish additional provisions for income taxes when, despite the belief that tax positions are fully supportable, there remain certain positions that are likely to be challenged and that may not be sustained on review by tax authorities. In the normal course of business, we are examined by various Federal, State and foreign tax authorities. We regularly assess the potential outcomes of these and any future examinations for the current or prior years in determining the adequacy of our provision for income taxes. We continually assess the likelihood and amount of potential adjustments and adjust the income tax provision, the current tax liability and deferred taxes in the period in which the facts that give rise to a revision become known.

It is our policy that no U.S. taxes are provided on undistributed earnings of certain wholly-owned foreign subsidiaries because substantially all such earnings are expected to be reinvested indefinitely. If circumstances change and it becomes apparent that some or all of the undistributed earnings of our wholly-owned foreign subsidiaries will not be indefinitely reinvested, provision for the tax consequences, if any, will be recorded in the period circumstances change. We do provide deferred taxes for the undistributed earnings of our Japanese high performance foams joint venture.

Stock-Based Compensation

Stock-based compensation expense associated with stock options, time-based and performance-based restricted stock grants, deferred stock units, and related awards is recognized in the consolidated statements of income (loss). Determining the amount of stock-based compensation expense to be recorded requires us to develop estimates to be used in calculating the grant-date fair value of stock options.

Stock Options

Historically, we have used stock options as part of our overall compensation plan for key employees. In recent years, we have not issued stock options and have shifted our equity award program towards time and performance based restricted stock awards. To value stock options, we calculate the grant-date fair values using the Black-Scholes valuation model. The use of valuation models requires us to make estimates for the following assumptions:

Expected volatility - In determining expected volatility, we consider a number of factors, including historical volatility and implied volatility.

Expected term - We use historical employee exercise data to estimate the expected term assumption for the Black-Scholes valuation model.

Risk-free interest rate - We use the yield on zero-coupon U.S. Treasury securities for a period commensurate with the expected term assumption as the risk-free interest rate.

Expected dividend yield – We do not currently pay dividends on our common stock; therefore, a dividend yield of 0% was used in the Black-Scholes model.

The amount of stock-based compensation expense recognized during a period is based on the value of the portion of the awards that are ultimately expected to vest. Forfeitures are estimated at the time of grant and revised, if necessary, in subsequent periods if actual forfeitures differ from those estimates. The term “forfeitures” is distinct from “cancellations” or “expirations” and represents only the unvested portion of the surrendered option. Based on an analysis of our historical forfeitures, we have applied an annual forfeiture rate of 3% to all unvested stock-based awards as of December 31, 2013. The rate of 3% represents the portion that is expected to be forfeited each year over the vesting period. This analysis is re-evaluated annually and the forfeiture rate is adjusted as necessary. Ultimately, the actual expense recognized over the vesting period will only be for those awards that vest.

Performance-Based Restricted Stock

In 2006, we began granting performance-based restricted stock awards to certain key executives. We currently have awards from 2011, 2012 and 2013 outstanding. These awards cliff vest at the end of a 3 year measurement period, except for 2011 and 2012 grants to those individuals who are retirement eligible during the grant period, as such awards are subject to accelerated vesting as the grant is earned over the course of the vesting period (i.e. a pro-rata payout occurs based on the retirement date). Participants are eligible to be awarded shares ranging from 0% to 200% of the original award amount, based on certain defined performance measures. Compensation expense is recognized using the straight line method over the vesting period, unless the employee has an accelerated vesting schedule. The 2011 and 2012 awards have three measurement criteria on which the final payout of the award is based - (i) the three year compounded annual growth rate (CAGR) of net sales, (ii) the three year CAGR of diluted earnings per share, and (iii) the three year average of each year's free cash flow as a percentage of net sales. In accordance with the applicable accounting literature, these measures are treated as performance conditions. The fair value of these awards is determined based on the market value of the underlying stock price at the grant date with cumulative compensation expense recognized to date being increased or decreased based on changes in the forecasted pay out percentages at the end of each reporting period.

The 2013 award has two measurement criteria on which the final payout of the award is based - (i) the three year return on invested capital (ROIC) compared to that of a specified group of peer companies, and (ii) the three year total shareholder return (TSR) on the performance of our common stock as compared to that of a specified group of peer companies. In accordance with the applicable accounting literature, the ROIC portion of the award is considered a performance condition. As such, the fair value of the ROIC portion is determined based on the market value of the underlying stock price at the grant date with cumulative compensation expense recognized to date being increased or decreased based on changes in the forecasted pay out percentage at the end of each reporting period. The TSR portion of the award is considered a market condition. As such, the fair value of this award was determined on the date of grant using a Monte Carlo simulation valuation model with related compensation expense fixed on the grant date and expensed on a straight-line basis over the life of the awards that ultimately vest with no changes for the final projected payout of the award. The assumptions used in the Monte Carlo are as follows:

Expected volatility – In determining expected volatility, we have considered a number of factors, including historical volatility.

Expected term – We use the vesting period of the award to determine the expected term assumption for the Monte Carlo simulation valuation model.

Risk-free interest rate – We use an implied "spot rate" yield on U.S. Treasury Constant Maturity rates as of the grant date for our assumption of the risk-free interest rate.

Expected dividend yield – We do not currently pay dividends on our common stock; therefore, a dividend yield of 0% was used in the Monte Carlo simulation valuation model.

Time-Based Restricted Stock

In 2011, we began granting time-based restricted stock awards to certain key executives and other key members of the Company's management team. We currently have grants from 2011, 2012 and 2013 outstanding. The 2011 and 2012 grants cliff vest at the end of the three year vesting period. The 2013 grants ratably vest on the first, second and third

anniversaries of the original grant date. We recognize compensation expense on all of these awards on a straight-line basis over the vesting period. The fair value of the award is determined based on the market value of the underlying stock price at the grant date.

Deferred Stock Units

We grant deferred stock units to non-management directors. These awards are fully vested on the date of grant and the related shares are generally issued on the 13th month anniversary of the grant date unless the individual elects to defer the receipt of these shares. Each deferred stock unit results in the issuance of one share of Rogers' stock. The grant of deferred stock units is typically

done annually in the second quarter of each year. The fair value of the award is determined based on the market value of the underlying stock price at the grant date.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

Market Risk

Foreign Operations

Our financial results are affected by changes in foreign exchange rates and economic conditions in foreign countries in which we do business. Our primary overseas markets are in Europe and Asia, thus exposing us to exchange rate risk from fluctuations in the Euro and the various currencies used in the Far East. Exposure to variability in currency exchange rates is mitigated, when possible, through the use of natural hedges, whereby purchases and sales in the same foreign currency and with similar maturity dates offset one another. We further mitigate this exposure through hedging activities by entering into foreign exchange forward contracts with third parties when the use of natural hedges is not possible or desirable. We currently do not use derivative instruments for trading or speculative purposes. We monitor foreign exchange risks and at times manage such risks on specific transactions. Our risk management process primarily uses analytical techniques and sensitivity analysis. In 2013, a 10% increase/decrease in exchange rates would have resulted in an approximate increase/decrease to sales and net income of \$20.9 million and \$2.6 million, respectively.

Interest Rate Risk

During the first quarter of 2011, we borrowed \$145.0 million against our existing credit facilities to finance the strategic acquisition of Curamik Electronics GmbH. The interest charged on this credit facility fluctuates with movements in the benchmark LIBO rate. In 2012, to limit exposure to upward movement in interest rates, we entered into an interest rate swap, which became effective in July 2013. This instrument caps exposure to upward movements in rates at 0.752% initially on 65% of the outstanding debt. Any movement in rates above this level would be offset by gains on the interest rate swap. At December 31, 2013, the effective all-in rate of interest on the debt facility was 2.1875% and the amount of debt covered by the swap was 68%. To illustrate, based on the outstanding debt as of December 31, 2013 of \$77.5 million, a 100 basis point increase in the LIBO rate would increase the amount of interest expense by \$0.8 million, annually. The effects of the interest rate swap would offset the interest expense increase by \$0.5 million resulting in a net increase of \$0.3 million as of December 31, 2013.

Commodity Risk

We are subject to fluctuations in the cost of raw materials used to manufacture our materials and products. In particular, we are exposed to market fluctuations in commodity pricing as we utilize certain materials, such as copper and ceramic, that are key materials in certain of our products. In order to minimize the risk of market driven price changes in these commodities, we utilize hedging strategies to insulate us against price fluctuations of copper, the commodity most used in our manufacturing processes. We currently do not use hedging strategies to minimize the risk of price fluctuations on other commodity-based raw materials; however, we continue to review such strategies to hedge market risk in the future.

For additional discussion on our market risk, see Notes 2 and 3 to the Consolidated Financial Statements in Item 8 of this Form 10-K.

Item 8. Financial Statements and Supplementary Data

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Shareholders of Rogers Corporation

We have audited the accompanying consolidated statements of financial position of Rogers Corporation as of December 31, 2013 and 2012, and the related consolidated statements of income (loss), shareholders' equity, comprehensive income (loss) and cash flows for each of the three years in the period ended December 31, 2013. Our audits also included the financial statement schedule listed in the Index at Item 15. These financial statements and schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of Rogers Corporation at December 31, 2013 and 2012, and the consolidated results of its operations and its cash flows for each of the three years in the period ended December 31, 2013, in conformity with U.S. generally accepted accounting principles. Also, in our opinion, the related financial statement schedule, when considered in relation to the basic financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Rogers Corporation's internal control over financial reporting as of December 31, 2013, based on criteria established in Internal Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (1992 framework) and our report dated February 24, 2014 expressed an unqualified opinion thereon.

ROGERS CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

NOTE 1 ORGANIZATION AND SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Organization

Our reporting structure is comprised of the following operating segments: High Performance Foams (HPF), Printed Circuit Materials (PCM), Power Electronics Solutions (PES) and the Other reportable segment. In the fourth quarter of 2013, we determined that a realignment of our segment structure was appropriate in order to present our financial results in a manner consistent with how management operates the business. Our previous reporting structure was comprised of the following operating segments: High Performance Foams, Printed Circuit Materials, Curamik Electronic Solutions and Power Distribution Systems and the Other reportable segment.

In the new structure, we will present three operating segments - High Performance Foams, Printed Circuit Materials, and Power Electronics Solutions and the Other reportable segment. During 2013, the management of the Curamik Electronic Solutions and Power Distribution Systems operations was combined under one segment management team and the former operating segments now meet the definition of product lines, as the management team has full cross functional and regional responsibility over all aspects of these product lines. Information is reported to the Chief Operating Decision Maker (the President and Chief Executive Officer of Rogers) at the Power Electronic Solutions operating segment level. We believe this structure aligns our external reporting presentation with how we currently manage and view our business internally. All prior periods herein have been recast to reflect this change.

High Performance Foams

The High Performance Foams operating segment includes polyurethane and silicone foam products manufactured in roll stock, sheet, and molded formats. These foams have characteristics that offer functional advantages in many market applications which serve to differentiate Rogers' products from other commonly available materials.

High Performance Foams products are sold globally to converters, fabricators, distributors and original equipment manufacturers (OEMs) for use in general industrial applications, portable communications, consumer goods, transportation, printing applications and other markets. Trade names for our High Performance Foams include: PORON® urethane foams used for making high performance gaskets and seals in vehicles, portable communications devices, computers and peripherals; PORON® cushion insole materials for footwear and related products; PORON® healthcare and medical materials for body cushioning and orthotic appliances; R/bak® compressible printing plate backing and mounting products for cushioning flexographic plates for printing on packaging materials; PORON® and XRD® for high impact cushioning protection; BISCO® silicone foams, solids, sponge and extrusion products for flame retardant gaskets, seals and cushioning applications in communications infrastructure equipment, aircraft, trains, cars and trucks, and for shielding extreme temperature or flame; and eSORBA® urethane foams used in portable communications, entertainment devices and other industrial applications.

We have two 50% owned joint ventures that extend and complement our worldwide business in High Performance Foams. Rogers INOAC Corporation (RIC), a joint venture with Japan-based INOAC Corporation, manufactures high performance polyurethane foam materials in Mie and Taketoyo, Japan to predominantly serve the Japanese and Taiwanese markets. Rogers INOAC Suzhou Corporation (RIS) was established in 2004 with INOAC Corporation and provides polyurethane foam materials primarily to the Asian marketplace.

Printed Circuit Materials

The Printed Circuit Materials operating segment includes printed circuit board laminate products for high frequency, high performance applications. These products have characteristics that offer performance and other functional advantages in many market applications, and serve to differentiate our products from other commonly available materials. These products are sold principally to independent and captive printed circuit board fabricators that convert our laminates to custom printed circuits.

The polymer-based dielectric layers of our circuit board laminates are proprietary materials that provide highly specialized electrical and mechanical properties. Trade names for our printed circuit board materials include RO3000®, RO4000®, RT/duroid®, ULTRALAM®, RO2800® and TMM® laminates. All of these laminates are used for making circuitry that receive, transmit, and process high frequency communications signals, yet each laminate has varying properties that address specific needs and applications within the communications market. High frequency circuits are used in the equipment and devices that comprise

wireless communications systems, including cellular communications, digital cellular communications, paging, direct broadcast television, global positioning, mobile radio communications, and radar for both aviation and automotive applications.

Power Electronics Solutions

The Power Electronics Solutions operating segment is comprised of direct copper bonded (DCB) ceramic substrate products and RO-LINX® power distribution products. We believe that our advanced, customized components enable the performance and reliability of today's growing array of power electronic devices and serve to increase the efficiency of applications by managing heat and ensuring the reliability of these critical devices used in converting raw energy into controlled and regulated power that can be used and managed.

Trade names for our Power Electronics Solutions products include curamik® ceramic substrates and RO-LINX® products. Curamik® ceramic substrates are used in the design of intelligent power management devices, such as insulated gate bipolar transistor (IGBT) modules, which enable a wide range of products including highly efficient industrial motor drives, wind and solar converters and electric and hybrid electric vehicle drive systems. RO-LINX® products are used in high power electrical inverter and converter systems for use in mass transit (e.g. high speed trains); clean technology applications (e.g. wind turbines, solar farms and electric vehicles) and variable frequency drives for high to mid power applications.

Other

The Other reportable segment consists of elastomer components, floats and inverter distribution activities. Elastomer components are sold to OEMs for applications in ground transportation, office equipment, consumer and other markets. Trade names for our elastomer components include: NITROPHYL® floats for level sensing in fuel tanks, motors, and storage tanks and ENDUR® elastomer rollers and belts for document handling in copiers, printers, mail sorting machines and automated teller machines. Inverters are sold primarily to OEMs and fabricators that in turn sell to various other third parties primarily serving the portable communication and automotive markets.

This segment previously included the results of the Composite Materials operating segment, which qualified as a discontinued operation in the fourth quarter of 2012 when we shut down production of non-woven composite materials. This segment also included the results of the Thermal Management Solutions operating segment, which qualified as a discontinued operation in 2011. All results have been recast to exclude these segments from consolidated results or continuing operations.

Principles of Consolidation

The consolidated financial statements include the accounts of the Company and our wholly owned subsidiaries, after elimination of inter-company accounts and transactions.

For all periods and amounts presented, reclassifications have been made for discontinued operations. In the fourth quarter of 2011, operations of the Thermal Management Solutions operating segment ended and the segment qualified as a discontinued operation at that time. In the fourth quarter of 2012, the operations of the non-woven composite materials operating segment (aggregated in the Other reportable segment) ended and the segment qualified as a discontinued operations. See "Note 18 - Discontinued Operations" for further discussion.

Cash Equivalents

Highly liquid investments with original maturities of three months or less are considered cash equivalents. These investments are stated at cost, which approximates fair value. In 2012, we had restricted cash of \$1.0 million related to the termination of the lease at our Bremen, Germany facility. That cash was released in the first quarter of 2013.

Marketable Securities

We determine the appropriate classification of debt securities at the time of purchase and reevaluate such designation as of each balance sheet date. Debt securities are classified as held-to-maturity when we have the positive intent and ability to hold the securities to maturity. Marketable equity securities and debt securities not classified as held-to-maturity are classified as available-for-sale. Available-for-sale securities are carried at fair value with interest on such securities included in "Interest income" on our consolidated statements of income (loss). If the market values of individual securities are determined to be "other than temporarily" impaired, the carrying amount of such investments are written down to market value through "Net realized gain (loss)" in our consolidated statements of income (loss). Except for amounts recorded related to the auction rate securities, we have not recorded any such write down in 2013, 2012 or 2011, respectively. See "Note 2 - Fair Value Measurements" for further discussion on the auction rate securities.

Investments in Unconsolidated Joint Ventures

We account for our investments in and advances to unconsolidated joint ventures, all of which are 50% owned, using the equity method of accounting.

Foreign Currency

All balance sheet accounts of foreign subsidiaries are translated or remeasured at exchange rates in effect at each year end, and income statement items are translated at the average exchange rates for the year. Resulting translation adjustments for those entities that operate under the local currency are made directly to a separate component of shareholders' equity, while remeasurement adjustments for those entities that operate under the parent's functional currency are made to the income statement as a component of "Other income (expense), net". Currency translation adjustments are reported as income or expense in the consolidated statements of income (loss) as a component of "Other income (expense), net". Such adjustments resulted in a loss of \$0.7 million in 2013, a loss of \$0.8 million in 2012, and a gain of \$0.6 million in 2011.

Allowance for Doubtful Accounts

The allowance for doubtful accounts is determined based on a variety of factors that affect the potential collectability of the related receivables, including the length of time receivables are past due, customer credit ratings, financial stability of customers, specific one-time events and past customer history. In addition, in circumstances where we are made aware of a specific customer's inability to meet its financial obligations, a specific allowance is established. The majority of accounts are individually evaluated on a regular basis and appropriate reserves are established as deemed appropriate based on the criteria previously mentioned. The remainder of the reserve is based on management's estimates and takes into consideration historical trends, market conditions and the composition of our customer base.

Inventories

Inventories are valued at the lower of cost or market. Certain inventories, amounting to \$12.7 million and \$17.1 million at December 31, 2013 and 2012, respectively, are valued by the last in, first out (LIFO) method. These inventories accounted for 25% of total gross inventory in 2013 and 27% of total gross inventory in 2012. The cost of the remaining portion of the inventories was determined principally on the basis of actual first-in, first-out (FIFO) costs.

If the inventories valued using the LIFO method had been valued at FIFO costs, their value would have increased by approximately \$7.4 million and \$6.5 million at December 31, 2013 and 2012, respectively.

Inventories consist of the following:

(Dollars in thousands)	December 31, 2013	December 31, 2012
Raw materials	\$24,301	\$29,064
Work-in-process	13,536	13,154
Finished goods	29,052	30,960
Total Inventory	\$66,889	\$73,178

Property, Plant and Equipment

Property, plant and equipment are stated on the basis of cost. For financial reporting purposes, provisions for depreciation are calculated on a straight line basis over the following estimated useful lives of the underlying assets:

	Years
Buildings and improvements	10-15
Machinery and equipment	5-15
Office equipment	3-10

Goodwill and Intangible Assets

Intangible assets are classified into three categories: (1) intangible assets with definite lives subject to amortization; (2) intangible assets with indefinite lives not subject to amortization; and (3) goodwill. We review goodwill, which has an indefinite life, and intangible assets with indefinite lives for impairment annually and/or if events or changes in circumstances indicate the carrying value of an asset may have been impaired. We review intangible assets with definite lives for impairment whenever conditions exist that indicate the carrying value may not be recoverable, such as in economic downturns in a market or a change in the assessment of future operations.

Goodwill and indefinite lived intangible assets are assessed for impairment by comparing the net book value of a reporting unit to its estimated fair value. Fair values are typically established using a discounted cash flow methodology. The determination of discounted cash flows is based on the reporting unit's strategic plans and long-term operating forecasts. The revenue growth rates included in the plans are management's best estimates based on current and forecasted market conditions, and the profit margin assumptions are projected by each segment based on the current cost structure and anticipated changes in that structure.

Purchased or acquired patents, covenants-not-to-compete, customer relationships and licensed technology are capitalized and amortized on a straight-line or accelerated basis over their estimated useful lives.

Environmental and Product Liabilities

We accrue for our environmental investigation, remediation, operating and maintenance costs when it is probable that a liability has been incurred and the amount can be reasonably estimated. For environmental matters, the most likely cost to be incurred is accrued based on an evaluation of currently available facts with respect to each individual site, including existing technology, current laws and regulations and prior remediation experience. For sites with multiple potential responsible parties (PRPs), we consider our likely proportionate share of the anticipated remediation costs and the ability of the other parties to fulfill their obligations in establishing a provision for those costs. When no amount within a range of estimates is more likely to occur than another, we accrue to the low end of the range. When future liabilities are determined to be reimbursable by insurance coverage, an accrual is recorded for the potential liability and a receivable is recorded for the estimated insurance reimbursement amount. We are exposed to the uncertain nature inherent in such remediation and the possibility that initial estimates will not reflect the final outcome of a matter.

We periodically perform a formal analysis to determine potential future liability and related insurance coverage for asbestos-related matters. Projecting future asbestos costs is subject to numerous variables that are extremely difficult to predict, including the number of claims that might be received, the type and severity of the disease alleged by each claimant, the long latency period associated with asbestos exposure, dismissal rates, costs of medical treatment, the financial resources of other companies that are co-defendants in claims, uncertainties surrounding the litigation process from jurisdiction to jurisdiction and from case to case, and the impact of potential changes in legislative or judicial standards, including potential tort reform. Furthermore, any predictions with respect to these variables are subject to even greater uncertainty as the projection period lengthens.

The models developed for determining the potential exposure and related insurance coverage were developed by outside consultants deemed to be experts in their respective fields with the forecast for asbestos related liabilities generated by National Economic Research Associates, Inc. (NERA) and the related insurance receivable projections developed by Marsh Risk Consulting (Marsh). The models contain numerous assumptions that significantly impact the results generated by the models. We believe the assumptions made are reasonable at the present time, but are subject to uncertainty based on the actual future outcome of our asbestos litigation. Historically, due to the inherent uncertainties of the forecast process and our limited amount of settlement and claims history, we utilized a forecast

period of five years, which we concluded was the most reasonable period for recognizing a reserve for projected asbestos liabilities, and that costs that might be incurred after that period were not reasonably estimable at this time. In 2012, we reviewed this assumption and determined that it was appropriate to extend the forecast period from five years to ten years. We reached this conclusion due to the fact that we now have considerably more experience in addressing asbestos related lawsuits and have a longer history of activity to use as a baseline to more accurately project the liability over a longer period than previously disclosed. Further, settlement trends have become more consistent in recent years and we believe that we now have a more meaningful history of data on which to base our projections. We determined that a ten year projection period is appropriate as, although we have a longer and more meaningful history of data over the last few years, we do not believe we have sufficient data to justify a longer projection period at this time.

Fair Value of Financial Instruments

Management believes that the carrying values of financial instruments, including cash and cash equivalents, short-term investments, accounts receivable, accounts payable, accrued liabilities and debt approximate fair value based on the maturities of these instruments.

Concentration of Credit and Investment Risk

We extend credit on an uncollateralized basis to almost all customers. Concentration of credit and geographic risk with respect to accounts receivable is limited due to the large number and general dispersion of accounts that constitute our customer base. We routinely perform credit evaluations on our customers. At December 31, 2013 and 2012, there were no customers that individually accounted for more than ten percent of total accounts receivable. We did not experience significant credit losses on customers' accounts in 2013, 2012, or 2011.

We invest excess cash principally in investment grade government and corporate debt securities. We have established guidelines relative to diversification and maturities in order to maintain safety and liquidity. These guidelines are periodically reviewed and modified to reflect changes in market conditions.

Income Taxes

The objective of accounting for income taxes is to recognize the amount of taxes payable or refundable for the current year and the deferred tax liabilities and assets for the future tax consequences of events that have been recognized in the entity's financial statements. We are subject to income taxes in the United States and in numerous foreign jurisdictions. No provision is made for U.S. income taxes on the undistributed earnings of our wholly-owned foreign subsidiaries because substantially all such earnings are indefinitely reinvested in those companies. If circumstances change and it becomes apparent that some or all of the undistributed earnings of our wholly-owned foreign subsidiaries will not be indefinitely reinvested, provision for the tax consequences, if any, will be recorded in the period circumstances change.

We have provided for potential liabilities due in various jurisdictions. In the ordinary course of global business, there are many transactions and calculations where the ultimate tax outcome is uncertain. Some of these uncertainties arise as a consequence of cost reimbursement arrangements among related entities. Although we believe our estimates are reasonable, no assurance can be given that the final tax outcome of these matters will not be different than that which is reflected in the historical income tax provisions and accruals. Such differences could have a material impact on our income tax provision and operating results in the period in which such determination is made.

Revenue Recognition

Revenue from product sales to customers is recognized when title passes to the customer, when persuasive evidence of an arrangement exists, the price is fixed or determinable, and collection is reasonably assured.

Shipping and Handling Charges

Costs that we incur for shipping and handling charges are charged to "Cost of sales" and payments received from our customers for shipping and handling charges are included in "Net sales" on our consolidated statements of income (loss).

Pension and Retiree Health Care and Life Insurance Benefits

We provide various defined benefit pension plans for our U.S. employees and we sponsor multiple fully insured or self-funded medical plans and fully insured life insurance plans for retirees. In 2013, the defined benefit plans were frozen, so that future benefits no longer accrue. The costs and obligations associated with these plans are dependent upon various actuarial assumptions used in calculating such amounts. These assumptions include discount rates, salary growth, long-term rate of return on plan assets, mortality rates, and other factors. The assumptions used in these models are determined as follows: (i) the discount rate used is based on the PruCurve index, (ii) the salary growth is based on our historical and projected level of salary increases; (iii) the long-term rate of return on plan assets is determined based on historical portfolio results, market results and our expectations of future returns, as well as current market assumptions related to long-term return rates; and (iv) the mortality rate is based on a mortality projection that estimates current longevity rates and their impact on the long-term plan obligations. We review these assumptions periodically throughout the year and update as necessary.

Earnings Per Share

The following table sets forth the computation of basic and diluted earnings per share from continuing operations:

(In thousands, except per share amounts)	2013	2012	2011
Numerator:			
Net income (loss)	\$37,659	\$69,134	\$44,250
Denominator:			
Denominator for basic earnings per share -			
Weighted-average shares	17,197,840	16,426,209	16,035,882
Effect of dilutive stock options	570,235	564,949	701,829
Denominator for diluted earnings per share - Adjusted weighted-average shares and assumed conversions	17,768,075	16,991,158	16,737,711
Basic income (loss) per share:	\$2.19	\$4.21	\$2.76
Diluted income (loss) per share:	2.12	4.07	2.64

Certain potential ordinary shares were excluded from the calculation of diluted weighted-average shares outstanding because they would have an anti-dilutive effect on net income per share.

	2013	2012	2011
Anti-dilutive shares excluded	—	68,000	—

Use of Estimates

The preparation of financial statements, in conformity with U.S. generally accepted accounting principles, requires management to make estimates and assumptions that affect the amounts reported in the financial statements and accompanying notes. Actual results could differ from those estimates.

Hedging Activity

We use derivative instruments to manage commodity, interest rate and foreign currency exposures. Derivative instruments are viewed as risk management tools and are not used for trading or speculative purposes. To qualify for hedge accounting treatment, derivatives used for hedging purposes must be designated and deemed effective as a hedge of the identified underlying risk exposure at the inception of the contract. Accordingly, changes in fair value of the derivative contract must be highly correlated with changes in the fair value of the underlying hedged item at inception of the hedge and over the life of the hedge contract.

Derivatives used to hedge forecasted cash flows associated with foreign currency commitments or forecasted commodity purchases are accounted for as cash flow hedges. For those derivative instruments that qualify for hedge accounting treatment, gains and losses are recorded in other comprehensive income and reclassified to earnings in a manner that matches the timing of the earnings impact of the hedged transactions. The ineffective portion of all hedges, if any, is recognized currently in earnings. For those derivative instruments that do not qualify for hedge accounting treatment, any related gains and losses are recognized in the consolidated statement of income as a component of "Other income/expense".

Advertising Costs

Advertising is expensed as incurred and amounted to \$2.9 million for 2013, \$2.0 million for 2012 and \$3.0 million for 2011.

Equity Compensation

Stock-based compensation is comprised of stock options and restricted stock. Stock options are measured at the grant date, based on the grant-date fair value of the awards ultimately expected to vest and, in most cases, is recognized as an expense on a straight-line basis over the vesting period, which is typically four years. A provision in our stock option agreements requires us to accelerate the expense for retirement eligible employees, as any unvested options would immediately vest upon retirement for such employees. We develop estimates used in calculating the grant-date fair value of stock options to determine the amount of stock-based compensation to be recorded. We calculate the grant-date fair value using the Black-Scholes valuation model. The use of this

valuation model requires estimates of assumptions such as expected volatility, expected term, risk-free interest rate, expected dividend yield and forfeiture rates.

Performance-based restricted stock compensation expense is based on achievement of certain performance and service conditions. The fair value of the awards is determined based on the market value of the underlying stock price at the grant date and marked to market over the vesting period based on projections of the underlying performance measures.

Time-based restricted stock compensation awards are expensed over the vesting period, which is typically three years. The fair value of the awards is determined based on the market value of the underlying stock price at the grant date.

NOTE 2 – FAIR VALUE MEASUREMENTS

The accounting guidance for fair value measurements establishes a three-tier fair value hierarchy, which prioritizes the inputs used in measuring fair value.

Level 1 – Quoted prices in active markets for identical assets or liabilities.

Level 2 – Inputs other than Level 1 that are observable, either directly or indirectly, such as quoted prices for similar assets or liabilities; quoted prices in markets that are not active; or other inputs that are observable or can be corroborated by observable market data for substantially the full term of the assets or liabilities.

Level 3 – Unobservable inputs that are supported by little or no market activity and that are significant to the fair value of the assets or liabilities.

From time to time we enter into various instruments that require fair value measurement, including foreign currency contracts, interest rate swaps and copper derivative contracts. Assets measured at fair value on a recurring basis, categorized by the level of inputs used in the valuation, include:

(Dollars in thousands)	Carrying amount as of December 31, 2013	Level 1	Level 2	Level 3
Pension assets	\$171,218	\$119,277	\$38,584	\$13,357
Foreign currency contracts	(77) —	(77) —
Copper derivative contracts	984	—	984	—
Interest rate swap	(296) —	(296) —

(Dollars in thousands)	Carrying amount as of December 31, 2012	Level 1	Level 2	Level 3
Pension assets	\$143,540	\$98,269	\$29,869	\$15,402
Foreign currency contracts	15	—	15	—
Copper derivative contracts	267	—	267	—
Interest rate swap	(361) —	(361) —

The following table presents information about our assets and liabilities measured at fair value on a non-recurring basis as of December 31, 2013, aggregated by the level in the fair value hierarchy within which those measurements fall. This Level 3 asset represents the investment in Solicore, Inc. The valuation is based on the most recent round of capital financing that occurred in the fourth quarter of 2013, resulting in a \$4.6 million impairment of the asset to the \$0.5 million current market value. See Note 9 - Investment for further details.

(Dollars in thousands)	Carrying amount as of December 31, 2013	Level 1	Level 2	Level 3
Solicore investment	\$507	\$—	\$—	\$507

The table below sets forth a summary of changes in the fair value of the Solicore investment Level 3 asset for the year ended December 31, 2013.

(Dollars in thousands)	Solicore investment
Balance at beginning of year	\$5,000
Cash investment	127
Impairment reported in earnings	(4,620)
Balance at end of year	\$507

Auction Rate Securities

Prior to the first quarter of 2008, our available-for-sale auction rate securities were recorded at fair value as determined in the active market at the time. However, due to events in the credit markets, the auctions failed during the first quarter of 2008 for the auction rate securities that we held at the end of the first quarter of 2008, and all of our auction rate securities had been in a loss position since that time until we redeemed them in the first quarter of 2012. Given the lack of unobservable inputs in the auction markets since the first quarter of 2008, such securities were considered Level 3 securities.

During 2011, we performed a fair value assessment of these securities based on a discounted cash flow model, utilizing various assumptions that included estimated interest rates, probabilities of successful auctions, the timing of cash flows, and the quality and level of collateral of the securities. These inputs were chosen based on our understanding of the expectations of the market and were consistent with the assumptions utilized during our assessment of these securities at year end 2011.

Prior to the first quarter of 2012, we had recognized an other-than-temporary impairment (OTTI) on these securities. An OTTI is recognized in earnings for a security in an unrealized loss position when an entity either (a) has the intent to sell the security or (b) more likely than not will be required to sell the security before its anticipated recovery. When an OTTI of a security occurs, the amount of the OTTI recognized in earnings depends on whether the security holder intended to sell the security or it is more likely than not that the holder would be required to sell the security before recovery of its cost basis. If the holder does not intend to sell the security and it is not more likely than not that the holder would be required to sell the security before the recovery of its cost basis, the other-than-temporary loss would be separated into (i) the amount representing the credit loss and (ii) the amount related to all other factors. The credit loss is primarily based on the underlying ratings of the securities. The amount representing the credit loss would be recognized in earnings, and the remaining amount would be recorded in other comprehensive income. This is the approach we used to recognize the OTTI taken prior to liquidation in the first quarter of 2012. The amount representing the credit loss was recognized in earnings, and since the factors above were not present, the remaining amount was recorded in other comprehensive income.

Due to our belief that it would have taken more than twelve months for the auction rate securities market to recover, these securities were classified as long-term assets, except for those that were scheduled to be redeemed within a twelve month period, which were classified as short-term investments.

During the first quarter of 2012, we liquidated our auction rate security portfolio, receiving net proceeds of \$25.4 million on a stated par value of \$29.5 million. As a result of this liquidation, we recognized a loss on the discount of the securities of \$3.2 million (the remaining difference between the liquidation and par value of \$0.9 million had previously been recognized as an impairment loss) in our earnings. Since the markets for these securities failed in the first quarter of 2008, we had redeemed \$24.9 million of these securities, mostly at par prior to the liquidation in the first quarter of 2012. Since the rate of par value redemptions had slowed during the last several quarters with no clear path for full redemption over the next several years and the rate of return on these securities was very low, management determined that a discounted redemption in the first quarter of 2012 was in the best interest of the Company as the related cash could be better utilized for other purposes going forward.

The reconciliation of our assets measured at fair value on a recurring basis using unobservable inputs (Level 3) is as follows:

(Dollars in thousands)	Auction Rate
------------------------	--------------

	Securities	
Balance at December 31, 2011	\$25,960	
Cash received for redemptions below par	(25,438)
Reclassified from other comprehensive income	2,723	
Reported in earnings	(3,245)
Balance at December 31, 2012	\$—	

There were no credit losses recognized for the years ended December 31, 2013 and 2012, respectively. Below is a roll forward of credit losses recognized in earnings for the year ended December 31, 2011.

(Dollars in thousands)	Credit Losses
Balance at December 31, 2010	\$917
Credit losses recorded	278
Reduction in credit losses due to redemptions	(82)
Balance at December 31, 2011	\$1,113

Derivatives Contracts

We are exposed to certain risks relating to our ongoing business operations. The primary risks being managed through the use of derivative instruments are interest rate risk, foreign currency exchange rate risk and commodity pricing risk, particularly related to copper.

Foreign Currency - The fair value of any foreign currency option derivatives is based upon valuation models applied to current market information such as strike price, spot rate, maturity date and volatility, and by reference to market values resulting from an over-the-counter market or obtaining market data for similar instruments with similar characteristics.

Commodity (Copper) - The fair value of copper derivatives is computed using a combination of intrinsic and time value valuation models. The intrinsic valuation model reflects the difference between the strike price of the underlying copper derivative instrument and the current prevailing copper prices in an over-the-counter market at period end. The time value valuation model incorporates the constant changes in the price of the underlying copper derivative instrument, the time value of money, the underlying copper derivative instrument's strike price and the remaining time to the underlying copper derivative instrument's expiration date from the period end date. Overall, fair value is a function of five primary variables: price of the underlying instrument, time to expiration, strike price, interest rate, and volatility.

Interest Rates - The fair value of our interest rate swap instruments is derived by comparing the present value of the interest rate forward curve against the present value of the swap rate, relative to the notional amount of the swap. The net value represents the estimated amount we would receive or pay to terminate the agreements. Settlement amounts for an "in the money" swap would be adjusted down to compensate the counterparty for cost of funds, and the adjustment is directly related to the counterparties' credit ratings.

We do not use derivative financial instruments for trading or speculation purposes.

For further discussion on our derivative contracts, see Note 3 - "Hedging Transactions and Derivative Financial Instruments" below.

Pension Assets

Our pension assets are stated at fair value on an annual basis and there are categories of assets in Level 1, 2 and 3 of the fair value hierarchy. See further discussion in Note 10 - "Pension Benefits and Retirement Health and Life Insurance Benefits".

NOTE 3 – HEDGING TRANSACTIONS AND DERIVATIVE FINANCIAL INSTRUMENTS

The guidance for the accounting and disclosure of derivatives and hedging transactions requires companies to recognize all of their derivative instruments as either assets or liabilities at fair value in the consolidated statements of financial position. The accounting for changes in the fair value (i.e., gains or losses) of a derivative instrument depends on whether it has been designated and qualifies for special hedge accounting treatment as defined under the applicable accounting guidance. For derivative instruments that are designated and qualify for cash flow hedge accounting treatment (i.e., hedging the exposure to variability in expected future cash flows that is attributable to a particular risk), the effective portion of the gain or loss on the derivative instrument is reported as a component of

other comprehensive income (loss). This gain or loss is reclassified into earnings in the same line item of the consolidated statements of income (loss) associated with the forecasted transaction and in the same period or periods during which the hedged transaction affects earnings. The remaining gain or loss on the derivative instrument in excess of the cumulative change in the present value of the future cash flows of the hedged item (i.e., the ineffective portion) if any, is recognized in the earnings during the current period. There was no material ineffectiveness for the year ended December 31, 2013 or 2012.

We currently have twenty outstanding contracts to hedge our exposure related to the purchase of copper at our German subsidiary, Curamik and U.S. operations in Arizona. These contracts are held with financial institutions and minimize our risk associated

with a potential rise in copper prices. These contracts cover the 2014 and 2015 monthly copper exposure and do not qualify for hedge accounting treatment; therefore, any mark-to-market adjustments required on these contracts are recorded in the "Other income, net" line item in our consolidated statements of income (loss).

In 2013, we entered into Euro, Japanese Yen, U.S Dollar and Hungarian Florint currency forward contracts. We entered into these foreign currency forward contracts to mitigate certain global balance sheet exposures. Our Japanese Yen currency forward contracts in Germany qualify for hedge accounting. Those contracts that do not qualify for hedge accounting treatment, have any mark-to-market. adjustments on these contracts recorded in the "Other income, net" line item in our consolidated statements of income (loss).

In 2012, we entered into an interest rate swap derivative instrument to hedge the LIBOR portion of the interest rate on 65% of the term loan debt then outstanding, effective July 2013. This transaction has been designated as a cash flow hedge and qualifies for hedge accounting treatment. At December 31, 2013, the term loan debt represents \$77.5 million of our total outstanding debt. At December 31, 2013, the rate charged on this debt is the 1 month LIBOR at 0.1875% plus a spread of 2.0%.

Concentration of Credit Risk			

By using derivative instruments, we are subject to credit and market risk. If a counterparty fails to fulfill its performance obligations under a derivative contract, our credit risk will equal the fair value of the derivative instrument. Generally, when the fair value of a derivative contract is positive, the counterparty owes the Company, thus creating a receivable risk for the Company. We minimize counterparty credit (or repayment) risk by entering into derivative transactions with major financial institutions with investment grade credit ratings.

NOTE 4 – ACQUISITION OF A BUSINESS

Curamik Electronics GmbH

On January 4, 2011, we acquired Curamik Electronics GmbH (Curamik), a manufacturer of power electronic substrate products headquartered in Eschenbach, Germany. The aggregate purchase price was \$151.1 million, which reflects post-closing adjustments.

Curamik, founded in 1983, is the worldwide leader for the development and production of direct bonded copper ceramic substrate products. These products are used primarily in the design of intelligent power management devices, such as IGBT (insulated gate bipolar transistor) modules, that enable a wide range of products, including high efficiency industrial motor drives, wind and solar energy converters and electrical systems in automobiles. Most of Curamik's products are manufactured using state of the art automated processes in its facility located in Eschenbach. For reporting purposes, Curamik's substrate products are considered a product line of Rogers and its results are included in the Power Electronics Solutions operating segment.

The acquisition was accounted for in accordance with applicable purchase accounting guidance. The following table represents the fair market value assigned to the acquired assets and liabilities in the transaction.

(Dollars in thousands)

Assets:

Cash	\$ 11,256
Accounts receivable	11,876
Other current assets	1,386
Inventory	12,259
Property, plant & equipment	32,312
Other non-current assets	2,276
Intangible assets	52,354
Goodwill	79,837
Total assets	203,556

Liabilities

Accounts payable	6,053
Other current liabilities	20,427
Deferred tax liability	9,329
Other long-term liabilities	16,666
Total liabilities	52,475

Fair value of net assets acquired \$ 151,081

Total costs incurred related to the acquisition were approximately \$3.4 million, of which \$1.3 million were incurred in the first quarter of 2011 and \$2.1 million in the fourth quarter of 2010. They are included in "Selling and administrative expenses" on our consolidated statements of income (loss).

Note 5 - Accumulated Other Comprehensive Income (Loss)

The changes of accumulated other comprehensive income (loss) by component at December 31, 2013 were as follows:

(Dollars in thousands)	Foreign currency translation adjustments	Funded status of pension plans and other postretirement benefits (1)	Unrealized gain (loss) on derivative instruments (2)	Total
Beginning Balance December 31, 2012	\$ 12,585	\$(70,158)	\$(235)	\$(57,808)
Other comprehensive income before reclassifications	10,171	—	(210)	9,961
Actuarial net gain (loss) incurred in the fiscal year	—	32,749	—	32,749
Amounts reclassified from accumulated other comprehensive income	—	3,412	236	3,648
Net current-period other comprehensive income	10,171	36,161	26	46,358
Ending Balance December 31, 2013	\$ 22,756	\$(33,997)	\$(209)	\$(11,450)

(1) Net of taxes of \$2,900 and \$22,371 for the periods ended December 31, 2013 and December 31, 2012, respectively.

(2) Net of taxes of \$110 and \$127 for the periods ended December 31, 2013 and December 31, 2012, respectively.

The changes of accumulated other comprehensive income (loss) by component at December 31, 2012 were as follows:

(Dollars in thousands)	Foreign currency translation adjustments	Funded status of pension plans and other postretirement benefits (3)	Unrealized gain (loss) on derivative instruments (4)	Unrealized gain (loss) on marketable securities (5)	Total
Beginning Balance December 31, 2011	\$5,875	\$(67,239)	\$(270)	\$(1,168)	\$(62,802)
Other comprehensive income before reclassifications	6,710	—	(235)	—	6,475
Actuarial net gain (loss) incurred in the fiscal year	—	(6,687)	—	—	(6,687)
Amounts reclassified from accumulated other comprehensive income	—	3,768	270	1,168	5,206
Net current-period other comprehensive income	6,710	(2,919)	35	1,168	4,994
Ending Balance December 31, 2012	\$12,585	\$(70,158)	\$(235)	\$—	\$(57,808)

(3) Net of taxes of \$22,371 and \$20,799 for the periods ended December 31, 2012 and December 31, 2011, respectively.

(4) Net of taxes of \$127 and \$0 for the periods ended December 31, 2012 and December 31, 2011, respectively.

(5) Net of taxes of \$1,555 for the period ended December 31, 2011.

The reclassifications out of accumulated other comprehensive income (loss) for the year ended December 31, 2013 were as follows:

Details about accumulated other comprehensive income components	Amounts reclassified from accumulated other comprehensive income (loss) for the period ended December 31, 2013	Affected line item in the statement where net income is presented
Unrealized gains and losses on derivative instruments:	363 (127 236	Realized gain (loss)) Tax benefit (expense) Net of tax
Amortization of defined benefit pension and other post-retirement benefit items:		
Prior service costs	\$1,431	(6)
Actuarial losses	3,819	(6)
	5,250	Total before tax
	(1,838) Tax benefit (expense)
	\$3,412	Net of tax

(6) These accumulated other comprehensive income components are included in the computation of net periodic pension cost. See Note 10 - "Pension Benefits and Retirement Health and Life Insurance Benefits" for additional details.

The reclassifications out of accumulated other comprehensive income (loss) for the year ended December 31, 2012 were as follows:

Details about accumulated other comprehensive income components	Amounts reclassified from accumulated other comprehensive income (loss) for the period ended December 31, 2012	Affected line item in the statement where net income is presented
Unrealized gains and losses on marketable securities:		
	\$(2,723) Realized gain (loss)
	1,555	Tax benefit (expense)
	\$(1,168) Net of tax
Unrealized gains and losses on derivative instruments:		
	415	Realized gain (loss)
	(145) Tax benefit (expense)
	270	Net of tax
Amortization of defined benefit pension and other post-retirement benefit items:		
Prior service costs	\$12	(6)
Actuarial losses	5,784	(6)
	5,796	Total before tax
	(2,028) Tax benefit (expense)
	\$3,768	Net of tax

(6) These accumulated other comprehensive income components are included in the computation of net periodic pension cost. See Note 8 - "Pension Benefits and Other Postretirement Benefit Plans" for additional details.

NOTE 6 - PROPERTY, PLANT AND EQUIPMENT

(Dollars in thousands)	December 31, 2013	December 31, 2012
Land	\$14,986	\$15,394
Buildings and improvements	136,959	132,673
Machinery and equipment	160,843	151,023
Office equipment	34,972	34,300
Equipment in process	21,360	21,202
	369,120	354,592
Accumulated depreciation	(222,189) (205,575
Total property, plant and equipment	\$146,931	\$149,017

Depreciation expense was \$20.4 million in 2013, \$22.7 million in 2012, and \$20.8 million in 2011. As part of the acquisition of Curamik in 2011, we acquired a capital lease on its facility in Eschenbach, Germany. At December 31, 2011 this capital lease was recorded in Property, plant and equipment in our consolidated statements of financial position for \$12.1 million, net of accumulated depreciation. The total obligation recorded for the lease as of December 31, 2013 and 2012 was \$8.0 million and \$8.4 million, respectively. Depreciation expense related to the

capital lease was \$0.4 million, \$0.4 million and \$0.4 million for the years ending December 31, 2013, 2012 and 2011, respectively. Accumulated depreciation for the capital lease as of December 31, 2013 and 2012 was \$1.2 million and \$0.8 million, respectively.

NOTE 7 – GOODWILL AND INTANGIBLE ASSETS

Definite Lived Intangible Assets

(Dollars in thousands)	December 31, 2013			December 31, 2012		
	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount
Trademarks and patents	\$1,075	\$303	\$772	\$1,066	\$227	\$839
Technology	37,825	13,340	\$24,485	36,479	8,394	28,085
Covenant-not-to-compete	1,056	628	\$428	1,042	358	684
Customer relationships	21,280	3,235	\$18,045	20,529	2,066	18,463
Total other intangible assets	\$61,236	\$17,506	\$43,730	\$59,116	\$11,045	\$48,071

In the table above, gross carrying amounts and accumulated amortization may differ from prior periods due to foreign exchange rate fluctuations.

Amortization expense was approximately \$6.0 million, \$4.4 million and \$5.4 million in 2013, 2012 and 2011, respectively. The estimated annual future amortization expense is \$5.9 million, \$5.5 million, \$5.0 million and \$4.4 million in 2014, 2015, 2016 and 2017, respectively. These amounts could vary based on changes in foreign currency exchange rates.

The weighted average amortization period as of December 31, 2013, by intangible asset class, is presented in the table below:

Intangible Asset Class	Weighted Average Amortization Period
Trademarks and patents	6.9
Technology	4.0
Covenant not-to-compete	1.5
Customer relationships	6.9
Total other intangible assets	5.2

On January 4, 2011 we acquired Curamik, a manufacturer of power electronic substrate products, which contributed \$52.4 million of intangible assets and \$79.8 million of goodwill. The intangible assets are comprised of trademarks, technology, and customer relationships and include approximately \$5.3 million of indefinite-lived intangible assets comprised of trademarks, which are assessed for impairment annually or when changes in circumstances indicate that the carrying values may not be recoverable. The definite-lived intangible assets are amortized using a fair value methodology that is based on the projected economic use of the related underlying asset.

Goodwill

The changes in the carrying amount of goodwill for the period ending December 31, 2013, by reportable segment, are as follows:

(Dollars in thousands)	High Performance Foams	Printed Circuit Materials	Power Electronics Solutions	Other	Total
December 31, 2012	\$23,973	\$—	\$78,844	\$2,224	\$105,041
Foreign currency translation adjustment	232	—	3,398	—	3,630
December 31, 2013	\$24,205	\$—	\$82,242	\$2,224	\$108,671

Annual Impairment Testing

We perform our annual goodwill impairment testing in the fourth quarter of the year. In 2013, we estimated the fair value of our reporting units using an income approach based on the present value of future cash flows. We believe this approach yields the most appropriate evidence of fair value as our reporting units are not easily compared to other corporations involved in similar businesses. We further believe that the assumptions and rates used in our annual impairment test are reasonable, but inherently uncertain. We currently have three reporting units with goodwill and intangible assets - High Performance Foams, Curamik and the Elastomer Components Division (ECD). The HPF, Curamik and ECD reporting units had allocated goodwill of approximately

71

\$24.2 million, \$82.2 million and \$2.2 million, respectively, at December 31, 2013. No impairment charges resulted from these analyses. The excess of fair value over carrying value for these reporting units was 405% for HPF, 30% for Curamik and 200% for ECD. From a sensitivity perspective, if the fair value of these reporting units declined by 10%, the fair value of the HPF reporting unit would exceed its carrying value by approximately 355%, the fair value of the Curamik reporting unit would exceed its carrying value by approximately 17%, and the fair value of the ECD reporting unit would exceed its carrying value by approximately 170%. These valuations are based on a five year discounted cash flow analysis, which utilized a discount rates ranging from 13.0% for HPF and ECD to 14.5% for Curamik and a terminal year growth rate of 3% for all three reporting units.

NOTE 8 – SUMMARIZED FINANCIAL INFORMATION OF UNCONSOLIDATED JOINT VENTURES

As of December 31, 2013, we had two joint ventures, each 50% owned, which are accounted for under the equity method of accounting.

Joint Venture	Location	Reportable Segment	Fiscal Year-End
Rogers INOAC Corporation (RIC)	Japan	High Performance Foams	October 31
Rogers INOAC Suzhou Corporation (RIS)	China	High Performance Foams	December 31

Equity income related to the joint ventures of \$4.3 million, \$4.7 million and \$5.5 million for the years ended December 31, 2013 , 2012 and 2011, respectively, is included in the consolidated statements of income (loss).

The summarized financial information for the joint ventures for the periods indicated is as follows:

(Dollars in thousands)	December 31, 2013	December 31, 2012
Current assets	\$32,033	\$40,721
Noncurrent assets	10,303	13,629
Current liabilities	5,943	12,008
Shareholders' equity	36,393	42,342

(Dollars in thousands)	For the years then ended:		
	December 31, 2013	December 31, 2012	December 31, 2011
Net sales	\$52,982	\$63,297	\$70,368
Gross profit (loss)	15,214	17,280	13,638
Net income (loss)	8,652	9,486	10,902

The effect of transactions between us and our unconsolidated joint ventures was accounted for on a consolidated basis. Receivables from and payables to joint ventures arise during the normal course of business from transactions between us and the joint ventures, typically from the joint venture purchasing raw materials from us to produce end products, which are sold to third parties, or from us purchasing finished goods from our joint ventures, which are then sold to third parties.

NOTE 9 - INVESTMENT

In the third quarter of 2009, we made a strategic investment of \$5.0 million in Solicore, Inc., headquartered in Lakeland, Florida. Solicore is focused on penetrating the market for embedded power solutions, offering its patented Flexicon advanced ultra-thin, flexible, lithium polymer batteries for smart cards, controlled access cards, RFID tags, and medical devices. Our investment, part of a total of \$13.3 million raised by Solicore in that financing round, provided us with a minority equity stake in Solicore and representation on Solicore's Board of Directors. We account for this investment under the cost method as we cannot exert significant influence over the business. We also entered

into a joint development agreement with Solicore to develop the next generation of power solution products using screen printing technology. If this technology is adopted, we will have the option to manufacture a significant portion of the products that result from this collaboration. In the first quarter of 2013, we made an additional investment of \$0.1 million in Solicore.

During the fourth quarter of 2013, Solicore raised additional equity capital through a round of capital financing that decreased our ownership interest in Solicore as we did not participate in this round of financing. Further, the financing round was issued at a significantly lower price than when we had initially invested in Solicore. In accordance with the applicable accounting guidance, this event represented an indicator of impairment. As a result, we performed an impairment test during the fourth quarter of 2013. The valuation was based on an option pricing methodology to estimate the per share value of the equity classes of stock held in Solicore. This method utilized a Black-Scholes option pricing model and the analytic process utilized to perform the valuation, which included back solving for the total equity value of Solicore. Based on the results of this valuation, there was a significant decline in the fair value of the Solicore business, which caused us to recognize an impairment charge on our investment in Solicore of approximately \$4.6 million. The remaining book value of our investment in Solicore is approximately \$0.5 million.

NOTE 10 – PENSION BENEFITS AND RETIREMENT HEALTH AND LIFE INSURANCE BENEFITS

We have two qualified noncontributory defined benefit pension plans. One plan covers our U.S. unionized hourly employees and the other plan covers all other U.S. employees hired through December 30, 2007. We also have established a nonqualified unfunded noncontributory defined benefit pension plan to restore certain retirement benefits that might otherwise be lost due to limitations imposed by federal law on qualified pension plans, as well as to provide supplemental retirement benefits, for certain senior executives of the Company.

In addition, we sponsor multiple fully insured or self-funded medical plans and a fully insured life insurance plan for retirees. The measurement date for all plans is December 31 for each respective plan year.

We are required, as an employer, to: (a) recognize in our statement of financial position an asset for a plan's overfunded status or a liability for a plan's underfunded status; (b) measure a plan's assets and our obligations that determine our funded status as of the end of the fiscal year; and (c) recognize changes in the funded status of a defined benefit postretirement plan in the year in which the changes occur and report these changes in accumulated other comprehensive income. In addition, actuarial gains and losses that are not immediately recognized as net periodic pension cost are recognized as a component of accumulated other comprehensive income (loss) and amortized into net periodic pension cost in future periods.

Defined Benefit Pension Plan Amendments and Retiree Medical Plan Amendments

In the second quarter of 2013, we made changes to our retirement plans in order to better plan and manage related expenses which have a significant and variable impact on earnings. Effective June 30, 2013, for salaried and non-union hourly employees in the U.S. and effective December 31, 2013 for union employees in the U.S., benefits under our defined benefit pension plans will no longer accrue. The freeze of the defined benefit pension plan for salaried and non-union hourly employees was approved by the Board of Directors on May 3, 2013. The freeze of the union employees' defined benefit pension plan was approved upon ratification of the labor agreement on April 14, 2013. These changes resulted in a remeasurement event requiring us to remeasure the plan asset and liabilities, as well as the expense related to the plans, as of April 30, 2013. This date was considered the accounting date, per the related accounting guidance, as it was reasonably close to the approval dates of these changes for both the union and salaried plans.

The projected benefit obligation, accumulated benefit obligation, and fair value of plan assets for the pension plans with an accumulated benefit obligation in excess of plan assets were \$144.3 million, \$144.3 million and \$138.2 million, respectively, as of December 31, 2013 and \$209.8 million, \$186.1 million and \$143.5 million, respectively, as of December 31, 2012.

The projected benefit obligation, accumulated benefit obligation, and fair value of plan assets for the pension plans with plan assets in excess of an accumulated benefit obligation were \$30.0 million, \$30.0 million and \$33.0 million, respectively, as of December 31, 2013. For 2012, there were no pension plans with plan assets in excess of an accumulated benefit obligation.

Components of Net Periodic Benefit Cost

(Dollars in thousands)	Pension Benefits			Postretirement Health and Life Insurance Benefits		
	2013	2012	2011	2013	2012	2011
Service cost	\$2,473	\$4,596	\$3,922	\$627	\$630	\$693

Special termination benefit	—	—	176	—	1,592	—
Curtailment charge	1,537	—	—	—	—	—
Net periodic benefit cost	\$4,255	\$11,131	\$5,002	\$863	\$2,448	\$900

In the second quarter of 2013, the decision to freeze the accruing of benefits in the defined benefit pension plans resulted in a curtailment charge of \$1.5 million.

In the first quarter of 2012, we implemented an early retirement program for certain eligible employees. As a result of this program, we incurred \$1.6 million in charges in 2012 related to a special termination benefit associated with the retirement health and life insurance benefits program, as we extended eligibility benefits to certain individuals who chose to participate in the program.

Early in the third quarter of 2012, we made a one-time cash payment to our former President and Chief Executive Officer of approximately \$6.3 million in accordance with the provisions of his retirement contract as part of his Pension Restoration Plan. This payment resulted in a settlement charge of approximately \$2.1 million, which was recognized in the third quarter of 2012.

The estimated net loss for the defined benefit pension plans that will be amortized from other comprehensive income into net periodic benefit cost over the next fiscal year is \$0.7 million. The estimated net loss (gain) for the defined benefit postretirement plans that will be amortized from other comprehensive income into net periodic benefit cost over the next fiscal year is \$0.1 million.

Weighted-average assumptions used to determine benefit obligations at December 31:

	Pension Benefits		Retirement Health and Life Insurance Benefits		
	2013	2012	2013	2012	
Discount rate	4.75	%4.00	% 3.25	%2.50	%
Rate of compensation increase	—	%4.00	% —	%—	%
Expected long-term rate of return on plan assets	7.50	%7.50	% —	%—	%

Weighted-average assumptions used to determine net benefit cost for the years ended:

	Pension Benefits		Retirement Health and Life Insurance Benefits		
	2013	2012	2013	2012	
Discount rate	4.00	%4.50	% 2.50	%3.50	%
Expected long-term rate of return on plan assets	7.50	%7.75	% —	—	
Rate of compensation increase	4.00	%4.00	% —	—	

Long-term rate of return on assets - To determine the expected long-term rate of return on plan assets, we review historical and projected portfolio performance, the historical long-term rate of return, and how any change in the

allocation of the assets could affect the anticipated returns. Adjustments are made to the projected rate of return if it is deemed necessary based on those factors and other current market trends.

Discount rate - To determine the discount rate, we review current market indices of high quality corporate bonds, particularly the PruCurve index, to ensure that the rate used in our calculations is consistent and within an acceptable range based on these indices, which reflect current market conditions. The market-based rates are modified to be Rogers-specific, and this is done by applying our pension benefit cash flow projections to the generic index rate. At December 31, 2013, this analysis resulted in a 75 basis point increase to the discount rate which went from 4.0% at December 31, 2012 to 4.75% at December 31, 2013.

Health care cost trend rates - For measurement purposes as of December 31, 2013 we assumed annual health care cost trend rates of 7.0% and 6.5% for covered health care benefits for retirees pre-age 65 and post-age 65, respectively. The rates were assumed to decrease gradually to 5.0% and 5.5%, respectively, in 2015 and remain at those levels thereafter. For measurement purposes as of December 31, 2012, we assumed annual health care cost trend rates of 8.0% and 7.5% for covered health care benefits for retirees pre-age 65 and post-age 65, respectively. Assumed health care cost trend rates have a significant effect on the amounts reported for the health care plans. A one-percentage point change in assumed health care cost trend rates would have the following effects:

(Dollars in thousands)	One Percentage Point Increase	Decrease
Effect on total service and interest cost	\$69	\$596
Effect on other postretirement benefit obligations	(64) (558)

Plan Assets

Our defined benefit pension assets are invested with the objective of achieving a total rate of return over the long-term that is sufficient to fund future pension obligations. In managing these assets and our investment strategy, we take into consideration future cash contributions to the plans, as well as the potential of the portfolio underperforming the market, which is partially mitigated by maintaining a diversified portfolio of assets.

In order to meet our investment objectives, we set asset allocation target ranges based on current funding status and future projections in order to mitigate the risk in the plan while maintaining its funded status. At December 31, 2013, we held approximately 60% equity securities and 40% fixed income securities in our portfolio, which is consistent with our allocation target of 57% equity to 43% fixed income. In order to further mitigate risk, in the future we plan to migrate to a portfolio more heavily weighted toward fixed income as our plan assets approach the projected benefit obligation.

In determining our investment strategy and calculating our plan liability and related expense, we utilize an expected long-term rate of return on plan assets. This rate is developed based on several factors, including the plans' asset allocation targets, the historical and projected performance on those asset classes, and on the plans' current asset composition. To justify our assumptions, we analyze certain data points related to portfolio performance. For example, we analyze the actual historical performance of our total plan assets, which has generated a return of approximately 9.1% over the past 18 year period (earliest data available for our analysis was 1996). Also, we analyze hypothetical rates of return for plan assets based on our current asset allocation mix, which we estimate would have generated a return of approximately, 7.6% over the last 20 years and 7.7% over the last 10 years. Additionally, we analyzed the potential return associated with our portfolio mix and determined it to be a projected return of 5% to 8% for the 25th to 75th percentile of assets, with an average return of 7%. Based on the historical returns and the projected future returns we determined that a target return of 7.5% is appropriate for the current portfolio.

Investments are stated at fair value. Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (an exit price).

Securities traded on a national securities exchange are valued at the last reported sales price on the last business day of the plan year. The fair value of the guaranteed deposit account is determined through discounting expected future investment cash flow from both investment income and repayment of principal for each investment purchased.

The estimated fair values of the participation units owned by the Plan in pooled separate accounts are based on quoted redemption values and adjusted for management fees and asset charges, as determined by the record keeper, on the last business day of the Plan year. Pooled separate accounts are accounts established solely for the purpose of investing the assets of one or more plans. Funds in a separate account are not commingled with other assets of the Company for investment purposes.

The following table presents the fair value of the net assets by asset category at December 31, 2013 and 2012:
(Dollars in thousands)

	2013	2012
Pooled separate accounts	\$38,584	\$29,869
Mutual funds	119,277	98,269
Guaranteed deposit account	13,357	15,402
Total investments at fair value	\$171,218	\$143,540

The following tables set forth by level, within the fair value hierarchy, the assets carried at fair value as of December 31, 2013 and 2012.

(Dollars in thousands)	Assets at Fair Value as of December 31, 2013			Total
	Level 1	Level 2	Level 3	
Pooled separate accounts	\$—	\$38,584	\$—	\$38,584
Mutual funds	119,277	—	—	119,277
Guaranteed deposit account	—	—	13,357	13,357
Total assets at fair value	\$119,277	\$38,584	\$13,357	\$171,218

(Dollars in thousands)	Assets at Fair Value as of December 31, 2012			Total
	Level 1	Level 2	Level 3	
Pooled separate accounts	\$—	\$29,869	\$—	\$29,869
Mutual funds	98,269	—	—	98,269
Guaranteed deposit account	—	—	15,402	15,402
Total assets at fair value	\$98,269	\$29,869	\$15,402	\$143,540

The table below sets forth a summary of changes in the fair value of the guaranteed deposit account's Level 3 assets for the year ended December 31, 2013.

(Dollars in thousands)	Guaranteed Deposit Account
Balance at beginning of year	\$15,402
Realized gains (losses)	—
Unrealized gains relating to instruments still held at the reporting date	784
Purchases, sales, issuances and settlements (net)	(2,829)
Transfers in and/or out of Level 3	—
Balance at end of year	\$13,357

Cash Flows

Contributions

At December 31, 2013, we have met the minimum funding requirements for our qualified defined benefit pension plans and were therefore not required to make a contribution to the plans in 2013 for any past years. In 2013 and 2012, we made voluntary contributions of \$13.0 million and \$16.0 million, respectively. As there is no funding requirement for the nonqualified defined benefit pension plans and the Retiree Health and Life Insurance benefit plans, we fund the amount of benefit payments made during the year, which is consistent with past practices. We currently estimate that we will make voluntary contributions of approximately \$13.0 million in 2014 towards our qualified defined benefit pension plans.

Estimated Future Payments

The following pension benefit payments, which reflect expected future employee service, as appropriate, are expected to be paid through the utilization of plan assets for the funded plans and from operating cash flows for the unfunded

plans. The Retiree

77

Health and Life Insurance benefits, for which no funding has been made, are expected to be paid from operating cash flows. The benefit payments are based on the same assumptions used to measure our benefit obligation at the end of fiscal 2013.

	Pension Benefits	Retiree Health and Life Insurance Benefits
2014	8,682	1,175
2015	8,210	1,186
2016	8,302	1,170
2017	8,599	1,094
2018	8,959	1,074
2019-2023	50,843	6,234

NOTE 11 EMPLOYEE SAVINGS AND INVESTMENT PLAN

We sponsor the Rogers Employee Savings and Investment Plan (RESIP), a 401(k) plan for domestic employees. Employees can defer an amount they choose, up to the yearly IRS limit of \$17,500 in 2013 and \$17,000 in 2012. Certain eligible participants are also allowed to contribute the maximum catch-up contribution per IRS regulations. Our matching contribution is 6% of an eligible employee's annual pre-tax contribution at a rate of 100% for the first 1% and 50% for the next 5% for a total match of 3.5%. Unless otherwise indicated by the participant, the matching dollars are invested in the same funds as the participant's contributions. RESIP related expense amounted to \$2.1 million in 2013, \$1.7 million in 2012 and \$1.7 million in 2011, which related solely to our matching contributions.

NOTE 12 - DEBT

On July 13, 2011, we entered into an amended and restated \$265 million secured five year credit agreement. This credit agreement ("Amended Credit Agreement") is with (i) JPMorgan Chase Bank, N.A., as administrative agent; (ii) HSBC Bank USA, National Association; (iii) RBS Citizens, National Association; (iv) Fifth Third Bank; and (v) Citibank, N.A. JPMorgan Securities LLC and HSBC Bank USA, National Association acted as joint bookrunners and joint lead arrangers; HSBC Bank USA, National Association and RBS Citizens, National Association acted as co-syndication agents; and Fifth Third Bank and Citibank, N.A. acted as co-documentation agents. The Amended Credit Agreement amends and restates the credit agreement signed between the Company and the same banks on November 23, 2010 and increased our borrowing capacity from \$165.0 million under the original agreement to \$265.0 million under the Amended Credit Agreement.

Key features of the Amended Credit Agreement, as compared to the November 23, 2010 credit agreement, include an increase in credit from \$165.0 million to \$265.0 million with the addition of a \$100.0 million term loan; the extension of maturity from November 23, 2014 to July 13, 2016; a 25 basis point reduction in interest costs; an increase in the size of permitted acquisitions from \$25.0 million to \$100.0 million; and an increase in permitted additional indebtedness from \$20.0 million to \$120.0 million.

The Amended Credit Agreement provided for the extension of credit in the form of a \$100.0 million term loan (which refinanced outstanding borrowings in the amount of \$100.0 million from the existing revolving credit line), as further described below; and up to \$165.0 million of revolving loans, in multiple currencies, at any time and from time to time until the maturity of the Amended Credit Agreement on July 13, 2016. We may borrow, pre-pay and re-borrow amounts under the \$165.0 million revolving portion of the Amended Credit Agreement; however, with respect to the \$100.0 million term loan portion, any principal amounts re-paid may not be re-borrowed. Borrowings may be used to finance working capital needs, for letters of credit and for general corporate purposes in the ordinary course of business, including the financing of permitted acquisitions (as defined in the Amended Credit Agreement).

Borrowings under the Amended Credit Agreement bear interest based on one of two options. Alternate base rate loans bear interest that includes a base reference rate plus a spread of 75 - 150 basis points, depending on our leverage ratio. The base reference rate is the greater of the prime rate; federal funds effective rate plus 50 basis points; and adjusted London interbank offered ("LIBO") rate plus 100 basis points. Euro-currency loans bear interest based on the adjusted LIBO rate plus a spread of 175 - 250 basis points, depending on our leverage ratio. Our current borrowings are Euro-currency based.

In addition to interest payable on the principal amount of indebtedness outstanding from time to time under the Amended Credit Agreement, the Company is required to pay a quarterly fee of 0.20% to 0.35% (based upon its leverage ratio) on the unused amount of the lenders' commitments under the Amended Credit Agreement.

In connection with the Amended Credit Agreement, we transferred borrowings in the amount of \$100.0 million from the revolving credit line under the November 23, 2010 credit agreement to the term loan under the Amended Credit Agreement. The Amended Credit Agreement requires the mandatory quarterly repayment of principal on amounts borrowed under such term loan. Payments commenced on September 30, 2011, and are scheduled to be completed on June 30, 2016. The aggregate mandatory principal payments due are as follows:

2011	\$2.5	million
2012	\$7.5	million
2013	\$12.5	million
2014	\$17.5	million
2015	\$35.0	million
2016	\$25.0	million

The Amended Credit Agreement is secured by many of the assets of Rogers and our World Properties, Inc, subsidiary, including but not limited to, receivables, equipment, intellectual property, inventory, stock in certain subsidiaries and real property.

As part of the Amended Credit Agreement, we are restricted in our ability to perform certain actions, including, but not limited to, our ability to pay dividends, incur additional debt, sell certain assets, and make capital expenditures, with certain exceptions. Further, we are required to maintain certain financial covenant ratios, including (i) a leverage ratio of no more than 3.0 to 1.0 and (ii) a minimum fixed charge coverage ratio (FCCR) as defined in the following table:

Period	Ratio
March 31, 2012 to December 31, 2012	1.25 : 1.00
March 31, 2013 to December 31, 2013	1.50 : 1.00
March 31, 2014 and thereafter	1.75 : 1.00

The FCCR is the ratio between Adjusted Earnings Before Interest Taxes Depreciation and Amortization (EBITDA) and Consolidated Fixed Charges as defined in the Amended Credit Agreement, which measures our ability to cover the fixed charge obligations. The key components of Consolidated Fixed Charges are capital expenditures, scheduled debt payments, capital lease payments, rent and interest expenses.

Relevant Fixed Charge metrics are detailed in the table below:

Periods	Q4 2012	Q1 2013	Q2 2013	Q3 2013	Q4 2013
Covenant Limit (minimum)	1.25	1.50	1.50	1.50	1.50
Actual FCCR	2.18	2.27	2.06	2.23	2.39

As of December 31, 2013, we were in compliance with all of our covenants, as we achieved actual ratios of approximately 1.00 on the leverage ratio and 2.39 on the fixed charge coverage ratio.

If an event of default occurs, the lenders may, among other things, terminate their commitments and declare all outstanding borrowings to be immediately due and payable together with accrued interest and fees.

In connection with the establishment of the initial credit agreement in 2010, we capitalized approximately \$1.6 million of debt issuance costs. We capitalized an additional \$0.7 million of debt issuance costs in 2011 related to the Amended Credit Agreement, as amended. Also, in connection with the Amended Credit Agreement, as amended, we capitalized an additional \$0.1 million of debt issuance costs in 2012. These costs will be amortized over the life of the Amended Credit Agreement, as amended, which will terminate in June 2016.

We incurred amortization expense of \$0.5 million, \$0.5 million, and \$0.5 million for the years ended 2013, 2012 and 2011, respectively. At December 31, 2013, we have approximately \$1.3 million of credit facility costs remaining to be amortized.

In the first quarter of 2011, we made an initial draw on the line of credit of \$145.0 million to fund the acquisition of Curamik. During 2013 and 2012, we made principal payments of \$20.5 million and \$24.5 million, respectively, on

the outstanding debt. The 2013 payments included an \$8.0 million payment on the revolving credit line, which paid the remaining balance of the revolving credit line.

We are obligated to pay \$17.5 million on this debt obligation in 2014. As of December 31, 2013, the outstanding debt related to the Amended Credit Agreement, as amended, consists of \$77.5 million of term loan debt. We have the option to pay part of or the entire amount at any time over the remaining life of the Amended Credit Agreement, as amended, with any balance due and payable at the agreement's expiration.

In addition, as of December 31, 2013, we had the following standby letter of credit (LOC) that was backed by the Amended Credit Agreement, as amended:

\$1.4 million letter of credit to guarantee Rogers workers compensation plan;

No amounts were owed on the standby LOC as of December 31, 2013 or December 31, 2012.

We also guarantee an interest rate swap related to the lease of the Curamik manufacturing facility in Eschenbach, Germany. The swap agreement is between the lessor, our Curamik subsidiary, and a third party bank. We guarantee any liability related to the swap agreement in case of default by the lessor through the term of the swap until expiration in July 2016, or if we exercised the option to buyout the lease at June 30, 2013 as specified within the lease agreement. We did not exercise our option to buyout the lease at June 30, 2013. The swap is in a liability position with the bank at December 31, 2013, and has a fair value of \$0.7 million. We have concluded that the probability of default by the lessor is not probable during the term of the swap, and we chose not to exercise the option to buyout the lease during the leasing period; therefore, the guarantee has no value.

Capital Lease

During the first quarter of 2011, we recorded a capital lease obligation related to the acquisition of Curamik for its primary manufacturing facility in Eschenbach, Germany. Under the terms of the leasing agreement, we had an option to purchase the property in either 2013 or upon the expiration of the lease in 2021 at a price which is the greater of (i) the then-current market value or (ii) the residual book value of the land including the buildings and installations thereon. We chose not to exercise the option to purchase the property that was available to us on June 30, 2013. The total obligation recorded for the lease as of December 31, 2013 and 2012 was \$8.0 million and \$8.4 million, respectively. Depreciation expense related to the capital lease was \$0.4 million, \$0.4 million and \$0.4 million for the years ending December 31, 2013, 2012 and 2011, respectively. Accumulated depreciation as of December 31, 2013 and 2012 was \$1.2 million and \$0.8 million, respectively.

These expenses are included as depreciation expense in Cost of Sales on our consolidated statements of income (loss). Interest expense related to the debt recorded on the capital lease is included in interest expense on the consolidated statements of income (loss). See "Interest" section below for further discussion.

Interest

We incurred interest expense on our outstanding debt of \$2.2 million, \$2.9 million and \$3.8 million for the years ended December 31, 2013, 2012 and 2011, respectively. We incurred an unused commitment fee of approximately \$0.5 million, \$0.4 million, and \$0.2 million for the years ended December 31, 2013, 2012, and 2011, respectively. In July 2012, we entered into an interest rate swap to hedge the variable interest rate on 65% of the term loan debt, then outstanding, effective through July 2013. At December 31, 2013, our outstanding debt balance is only made up of the term loan debt, which is \$77.5 million. At December 31, 2013, the rate charged on this debt is the 1 month LIBOR at 0.1875% plus a spread of 2.00%.

We also incurred interest expense on the capital lease of \$0.5 million, \$0.6 million and \$1.0 million for the years ended December 31, 2013, 2012 and 2011, respectively. Cash paid for interest was \$3.1 million, \$4.0 million and \$4.2 million for 2013, 2012 and 2011, respectively.

Restriction on Payment of Dividends

Pursuant to the Amended Credit Agreement, as amended, we cannot make a cash dividend payment if a default or event of default has occurred and is continuing or shall result from the cash dividend payment.

NOTE 13 – INCOME TAXES

Consolidated income (loss) from continuing operations before income taxes consists of:

(Dollars in thousands)	2013	2012	2011
Domestic	\$13,208	\$6,260	\$9,285
International	35,677	16,390	46,483
Total	\$48,885	\$22,650	\$55,768

The income tax expense (benefit) in the consolidated statements of income (loss) consists of:

(Dollars in thousands)	Current	Deferred	Total
2013			
Domestic	\$(7,075) \$5,894	\$(1,181
International	12,667	(260) 12,407
Total	\$5,592	\$5,634	\$11,226
2012			
Domestic	\$3,651	\$(59,414) \$(55,763
International	8,118	1,161	9,279
Total	\$11,769	\$(58,253) \$(46,484
2011			
Domestic	\$2,173	\$(828) \$1,345
International	12,070	(1,897) 10,173
Total	\$14,243	\$(2,725) \$11,518

Deferred tax assets and liabilities as of December 31, 2013 and 2012, are comprised of the following:

(Dollars in thousands)	2013	2012
Deferred tax assets		
Accrued employee benefits and compensation	\$8,927	\$10,591
Postretirement benefit obligations	2,736	23,066
Tax credit carryforwards	9,825	18,574
Reserves and accruals	6,671	6,014
Depreciation and amortization	20,717	19,134
Other	3,715	1,751
Total deferred tax assets	52,591	79,130
Less deferred tax asset valuation allowance	(466) (466
Total deferred tax assets, net of valuation allowance	52,125	78,664
Deferred tax liabilities		
Investment in joint ventures, net	—	1,559
Depreciation and amortization	15,839	15,654
Other	238	332
Total deferred tax liabilities	16,077	17,545
Net deferred tax asset	\$36,048	\$61,119

We have a \$1.0 million net operating loss carryforward in China which will begin to expire in 2017. Excluded from the table above are state loss carryforwards ranging from approximately \$0.0 million to \$11.0 million in various state taxing jurisdictions, and credit carryforwards ranging from approximately \$0.0 million to \$4.0 million in various state taxing jurisdictions. As we

continually generate credits in excess of our current year tax liability in these jurisdictions, we believe that it is remote that we will ever benefit from those tax attributes. Accordingly, we have not recorded any deferred tax assets related to such items on our consolidated statements of financial position for the years ended December 31, 2013 and 2012.

We currently have approximately \$13.8 million of foreign tax credits that begin to expire in 2022, \$4.6 million of research and development credits that begin to expire in 2027, and \$0.5 million of minimum tax credits that can be carried forward indefinitely.

As a result of certain realization requirements, the table of deferred tax assets and liabilities shown above does not include certain deferred tax assets as of December 31, 2013 that the use of which was postponed by tax deductions related to equity compensation in excess of compensation recognized for financial reporting. Those deferred tax assets include foreign tax credits of \$6.8 million, research and development credits of \$1.2 million and minimum tax credits of \$0.4 million. Equity will be increased by \$8.4 million if and when such deferred tax assets are ultimately realized.

We had a valuation allowance of \$0.5 million at both December 31, 2013 and 2012, against certain of our U.S. deferred tax assets. A valuation allowance for deferred tax assets is recorded to the extent we cannot determine that the ultimate realization of a deferred tax asset is more likely than not. In determining the need for a valuation allowance, we assess the available positive and negative evidence as well as consider available tax planning strategies. In 2009, we established a valuation allowance against substantially all of our U.S. deferred tax assets as we concluded that we did not have sufficient evidence to support the position that these assets would be utilized in the future. This conclusion was reached primarily due to the presence of recent cumulative losses in the U.S. and upon consideration of all other available evidence, both positive and negative, using a “more likely than not standard” in accordance with applicable accounting guidance. At the end of the third quarter of 2012, we concluded that a valuation allowance against these assets was longer no necessary as we were no longer in, nor were we expecting to be in, a cumulative loss in the foreseeable future. As we are no longer in a cumulative loss position we should be able to rely on forecasted U.S. profits as a source of taxable income. Also, in appropriate circumstances we have the opportunity to undertake a tax planning strategy to ensure that our tax credit carryforwards do not expire unutilized. This strategy is based upon our ability to make a tax election to capitalize certain expenses that will result in generating taxable income to allow us to utilize our tax credit carryforwards before they expire. We would undertake such a strategy to realize these tax credit carryforwards prior to expiration as it is reasonable, prudent, and feasible. This, along with other positive evidence, such as our recent history of positive taxable income, led us to conclude in 2012 that it is more likely than not that we will ultimately be able to realize our deferred tax assets.

Also in 2012, we realized a capital loss on the sale of the auction rate securities. As we do not have the ability to generate capital gains in the near future, we have established a valuation allowance against this deferred tax asset.

On September 13, 2013, Treasury and the Internal Revenue Service issued final regulations regarding the deduction and capitalization of expenditures related to tangible property. The final regulations under Internal Revenue Code Sections 162, 167 and 263(a) apply to amounts paid to acquire, produce, or improve tangible property as well as dispositions of such property and are generally effective for tax years beginning on or after January 1, 2014. We have evaluated these regulations and determined they will not have a material impact on our consolidated results of operations, cash flows or financial position.

Income tax expense differs from the amount computed by applying the United States federal statutory income tax rate to income before income taxes. The reasons for this difference are as follows:

(Dollars in thousands)	2013	2012	2011
Tax expense at Federal statutory income tax rate	\$17,110	\$7,928	\$19,518
International tax rate differential	(2,541) (209) (4,627

Edgar Filing: ROGERS CORP - Form 10-K

Foreign source income, net of tax credits	(786) (3,428) (1,021)
Unrecognized tax benefits	(2,197) 1,604	272	
General business credits	(702) —	(831)
Valuation allowance change	—	(52,650) (1,989)
Other	342	271	196	
Income tax expense (benefit)	\$11,226	\$(46,484) \$11,518	

Our tax holiday on the earnings of our subsidiaries in China expired at the end of 2011. Under the business license agreement granted to Rogers Technologies (Suzhou) Company (RSZ), a wholly-owned subsidiary of ours, the first two years of cumulatively profitable operations were taxed at a 0% tax rate followed by a reduced tax rate in subsequent years that gradually increased to the 25% full rate of tax beginning in 2012. In 2011, RSZ reported pretax income of \$17.9 million, which was subject to a tax rate

of 24%. Under the business license agreement granted to Rogers (Shanghai) International Trading Company Ltd. (RSH), also a wholly-owned subsidiary of ours, RSH was subject to a reduced rate of tax that gradually increased to the 25% full rate of tax beginning in 2012. In 2011, RSH reported pretax income of \$2.4 million which was subject to a tax rate of 24%.

The objective of accounting for income taxes is to recognize the amount of taxes payable or refundable for the current year and the deferred tax liabilities and assets for the future tax consequence of events that have been recognized in the entity's financial statements. We are subject to income taxes in the United States and in numerous foreign jurisdictions. No provision is made for U.S. income taxes on the undistributed earnings of substantially all of our wholly-owned foreign subsidiaries because such earnings are indefinitely reinvested in those companies. If circumstances change and it becomes apparent that all or some of the undistributed earnings of our wholly-owned foreign subsidiaries will not be indefinitely reinvested, a provision for the tax consequence, if any, will be recorded in the period circumstances change. At December 31, 2013 and 2012, we have not accrued U.S. income taxes on unremitted earnings of approximately \$172.9 million and \$130.9 million, respectively.

Income taxes paid, net of refunds, were \$11.1 million, \$11.6 million, and \$17.1 million, in 2013, 2012, and 2011, respectively.

A reconciliation of unrecognized tax benefits, excluding potential interest and penalties, for the years ending December 31, 2013 and December 31, 2012, is as follows:

(Dollars in thousands)

	2013	2012
Beginning balance	\$17,333	\$16,133
Gross increases - current period tax positions	1,445	1,929
Gross decreases - tax positions in prior periods	(7,136)) —
Foreign currency exchange	79	37
Lapse of statute of limitations	(2,573)) (766)
Ending balance	\$9,148	\$17,333

If the December 31, 2013 balance of \$9.1 million is recognized, it would decrease the effective tax rate in the period in which each of the benefits is recognized. Based upon new facts and circumstances that took place during the year, in 2013 we had a \$7.136 million reduction to unrecognized tax benefits as a result of a redetermination of a prior position related to an international tax matter. At December 31, 2013 and 2012, we had accrued potential interest and penalties of approximately \$1.1 million and \$2.0 million, respectively. The potential interest and penalties are included as a component of income tax expense. It is reasonably possible that between \$1.5 million and \$2.0 million of our currently unrecognized tax benefits may be recognized within 12 months as a result of projected resolutions of worldwide tax disputes or the expiration of the statute of limitations.

We are subject to taxation in the U.S. and various state and foreign jurisdictions. Our tax years from 2010 through 2013 are subject to examination by the tax authorities. With few exceptions, we are no longer subject to U.S. federal, state, local and foreign examinations by tax authorities for the years before 2010.

NOTE 14 - SHAREHOLDERS' EQUITY AND STOCK OPTIONS

Accumulated Other Comprehensive Income (Loss)

The components of accumulated other comprehensive income (loss) at December 31, 2013 were as follows:

(Dollars in thousands)

Edgar Filing: ROGERS CORP - Form 10-K

	December 31, 2013	December 31, 2012
Foreign currency translation adjustments	\$22,756	\$12,585
Funded status of pension plans and other postretirement benefits, net of tax of \$2,900 and \$22,371.	(33,997) (70,158)
Unrealized gain (loss) on derivative instruments, net of tax of \$110 and \$127	(209) (235)
Accumulated other comprehensive income (loss)	(11,450) (57,808)

Capital Stock and Equity Compensation Awards

Under the Rogers Corporation 2009 Long-Term Equity Compensation Plan, we may grant stock options to officers, directors, and other key employees at exercise prices that are at least equal to the fair market value of our stock on the date of grant. Under our older plans, stock options to officers, directors, and other key employees could be granted at exercise prices that were as low as 50% of the fair market value of our stock as of the date of grant. However, in terms of these older plans, virtually all such options were granted at exercise prices equal to the fair market value of our stock as of the date of grant. With shareholder approval of the Rogers Corporation 2009 Long-Term Equity Compensation Plan, no new equity awards will be granted from our older plans. Regular options granted to employees in the United States generally become exercisable over a four-year period from the grant date and expire ten years after such grant. Stock option grants were also made under the older plans to non-management directors, on a semi-annual basis, with the last of such grants being made in June 2008.

Beginning in December 2008, each non-management director was awarded deferred stock units instead of stock options. Such deferred stock units permit non-management directors to receive, at a later date, one share of Rogers stock for each deferred stock unit with no payment of any consideration by the director at the time the shares are received. For director stock options, the exercise price was equal to the fair market value of our stock as of the grant date, are immediately exercisable, and expire ten years after the date of grant. Our 2005 Equity Compensation Plan and our 2009 Long-Term Equity Compensation Plan also permit the granting of restricted stock and certain other forms of equity awards to officers and other key employees, although, as mentioned above, no new equity awards are being made pursuant to the 2005 plan. Stock grants in lieu of cash compensation are also made to non-management directors and the Stock Acquisition Program, approved in 2009, is now being used for such grants if a non-management director chooses to receive Rogers stock in lieu of cash compensation.

Bruce D. Hoehner, President and Chief Executive Officer, was granted three equity awards when he joined Rogers as our new President and Chief Executive Officer in October of 2011. This consisted of two time-based restricted stock unit awards with different vesting schedules and a non-qualified stock option award. The Board of Directors (including a majority of its independent directors) approved these equity inducement awards in reliance on an employment inducement exception to shareholder approval provided for in the New York Stock Exchange governance rules.

Shares of capital stock reserved for possible future issuance are as follows:

	December 31, 2013	December 31, 2012
Stock acquisition program	120,883	120,883
Stock options and restricted stock	1,328,414	2,081,116
Shares available for issuance	479,307	659,292
Rogers Employee Savings and Investment Plan	169,044	249,490
Rogers Corporation Global Stock Ownership Plan for Employees	181,617	201,676
Deferred compensation to be paid in stock	14,558	49,090
Total	2,293,823	3,361,547

Each outstanding share of Rogers capital (common) stock has attached to it a stock purchase right. One stock purchase right entitles the holder to buy one share of Rogers capital (common) stock at an exercise price of \$240.00 per share. The rights become exercisable only under certain circumstances related to a person or group acquiring or offering to acquire a substantial block of Rogers capital (common) stock. In certain circumstances, holders may acquire Rogers stock, or in some cases the stock of an acquiring entity, with a value equal to twice the exercise price. The rights expire on March 30, 2017, but may be exchanged or redeemed earlier. If such rights are redeemed, the redemption

price would be \$0.01 per right.

Stock Options

Stock options have been granted under various equity compensation plans. While we may grant options to employees that become exercisable at different times or within different periods, we have generally granted options to employees that vest and become exercisable in one-third increments on the 2nd, 3rd and 4th anniversaries of the grant dates. The maximum contractual term for all options is normally ten years.

We use the Black-Scholes option-pricing model to calculate the grant-date fair value of an option. We did not grant any stock options in 2013. The fair value of options granted in 2012 and 2011 were calculated using the following weighted average assumptions:

Edgar Filing: ROGERS CORP - Form 10-K

	December 31, 2012	December 31, 2011	
Options granted	46,950	131,750	
Weighted average exercise price	\$41.27	\$46.29	
Weighted-average grant date fair value	19.08	21.08	
Assumptions:			
Expected volatility	47.70	% 46.92	%
Expected term (in years)	5.9	5.6	
Risk-free interest rate	1.43	% 2.13	%
Expected dividend yield	—	—	

Expected volatility – In determining expected volatility, we have considered a number of factors, including historical volatility and implied volatility.

Expected term – We use historical employee exercise data to estimate the expected term assumption for the Black-Scholes valuation.

Risk-free interest rate – We use the yield on zero-coupon U.S. Treasury securities for a period commensurate with the expected term assumption as the risk-free interest rate.

Expected dividend yield – We do not currently pay dividends on our common stock; therefore, a dividend yield of 0% was used in the Black-Scholes model.

In most cases, we recognize expense using the straight-line attribution method for stock option grants. The amount of stock-based compensation recognized during a period is based on the value of the portion of the awards that are ultimately expected to vest. Forfeitures are required to be estimated at the time of grant and revised, if necessary, in subsequent periods if actual forfeitures differ from those estimates. The term “forfeitures” is distinct from “cancellations” or “expirations” and represents only the unvested portion of the surrendered option. We currently expect, based on an analysis of our historical forfeitures, an annual forfeiture rate of approximately 3% and applied that rate to the grants issued. This assumption will be reviewed periodically and the rate will be adjusted as necessary based on these reviews. Ultimately, the actual expense recognized over the vesting period will only be for those options that vest.

Our employee stock option agreements contain a retirement provision, which results in the vesting of any unvested options immediately upon retirement. This provision affects the timing of option expense recognition for options meeting the criteria for retirement. We recognize compensation expense over the period from the date of grant to the date retirement eligibility is met, if it is shorter than the required service period, or upon grant if the employee is eligible for retirement on that date.

A summary of the activity under our stock option plans as of December 31, 2013 and changes during the year then ended, is presented below:

	Options Outstanding	Weighted- Average Exercise Price Per Share	Weighted-Average Remaining Contractual Life in Years	Aggregate Intrinsic Value
Options outstanding at December 31, 2012	1,765,947	\$40.58	1.3	19,557,233
Options granted	—	—		
Options exercised	(847,340)) 37.82		
Options cancelled	(25,468)) 39.04		
Options outstanding at December 31, 2013	893,139	43.23	3.9	16,403,816
	721,645	44.62	3.2	12,270,104

Options exercisable at December 31,
2013

Options vested or expected to vest at December 31, 2013*	887,994	43.27	3.9	16,279,805
---	---------	-------	-----	------------

* In addition to the vested options, we expect a portion of the unvested options to vest at some point in the future. Options expected to vest are calculated by applying an estimated forfeiture rate to the unvested options.

85

During the years ended December 31, 2013 and 2012, the total intrinsic value of options exercised (i.e. the difference between the market price at time of exercise and the price paid by the individual to exercise the options) was \$13.6 million and \$8.9 million, respectively. The total amount of cash received from the exercise of these options was \$32.4 million and \$17.0 million, respectively. The total grant-date fair value of stock options that vested during the years ended December 31, 2013 and 2012 was approximately \$0.4 million and \$2.0 million, respectively.

As of December 31, 2013, there was \$0.6 million of total unrecognized compensation cost related to unvested stock option awards. That cost is expected to be recognized over a weighted-average period of 1.4 years.

We recognized \$0.4 million, \$2.0 million and \$3.6 million of compensation expense related to stock options for the years ended December 31, 2013, 2012 and 2011, respectively.

A summary of the activity under our stock option plans as for the fiscal years ended 2013, 2012 and 2011, is presented below:

	2013		2012		2011	
	Options Outstanding	Weighted-Average Exercise Price Per Share	Options Outstanding	Weighted-Average Exercise Price Per Share	Options Outstanding	Weighted-Average Exercise Price Per Share
Outstanding at beginning of year	1,765,947	\$40.58	2,401,809	\$37.54	2,626,371	\$36.63
Options granted	—	—	46,950	41.27	131,750	46.29
Options exercised	(847,340)) 37.82	(614,263)) 42.97	(329,964)) 33.61
Options cancelled	(25,468)) 39.04	(68,549)) 43.57	(26,348)) 30.77
Outstanding at year-end	893,139	43.23	1,765,947	40.58	2,401,809	37.54
Options exercisable at year-end	721,645		1,274,340		1,609,982	

Performance-Based Restricted Stock

In 2006, we began granting performance-based restricted stock awards to certain key executives. We currently have awards from 2011, 2012 and 2013 outstanding. These awards cliff vest at the end of a 3 year measurement period, except for 2011 and 2012 grants to those individuals who are retirement eligible during the grant period, as such awards are subject to accelerated vesting as the grant is earned over the course of the vesting period (i.e. a pro-rata payout occurs based on the retirement date). Participants are eligible to be awarded shares ranging from 0% to 200% of the original award amount, based on certain defined performance measures. Compensation expense is recognized using the straight line method over the vesting period, unless the employee has an accelerated vesting schedule. The 2011 and 2012 awards have three measurement criteria on which the final payout of the award is based - (i) the three year compounded annual growth rate (CAGR) of net sales, (ii) the three year CAGR of diluted earnings per share, and (iii) the three year average of each year's free cash flow as a percentage of net sales. In accordance with the applicable accounting literature, these measures are treated as performance conditions. The fair value of these awards is determined based on the market value of the underlying stock price at the grant date with cumulative compensation expense recognized to date being increased or decreased based on changes in the forecasted pay out percentages at the end of each reporting period.

The 2013 award has two measurement criteria on which the final payout of the award is based - (i) the three year return on invested capital (ROIC) compared to that of a specified group of peer companies, and (ii) the three year total shareholder return (TSR) on the performance of our common stock as compared to that of a specified group of peer companies. In accordance with the applicable accounting literature, the ROIC portion of the award is considered a performance condition. As such, the fair value of the ROIC portion is determined based on the market value of the underlying stock price at the grant date with cumulative compensation expense recognized to date being increased or

decreased based on changes in the forecasted pay out percentage at the end of each reporting period. The TSR portion of the award is considered a market condition. As such, the fair value of this award was determined on the date of grant using a Monte Carlo simulation valuation model with related compensation expense fixed on the grant date and expensed on a straight-line basis over the life of the awards that ultimately vest with no changes for the final projected payout of the award.

86

Below are the assumptions used in the Monte Carlo calculation:

Expected volatility	37.1	%
Expected term (in years)	3.0	
Risk-free interest rate	0.40	%
Expected dividend yield	—	

Expected volatility – In determining expected volatility, we have considered a number of factors, including historical volatility.

Expected term – We use the vesting period of the award to determine the expected term assumption for the Monte Carlo simulation valuation model.

Risk-free interest rate – We use an implied "spot rate" yield on U.S. Treasury Constant Maturity rates as of the grant date for our assumption of the risk-free interest rate.

Expected dividend yield – We do not currently pay dividends on our common stock; therefore, a dividend yield of 0% was used in the Monte Carlo simulation valuation model.

Actual performance during the relevant period for the 2011 grant, which vested as of December 31, 2013, met the target performance criteria and shares will be paid out at 108% of target during the first quarter of 2014.

A summary of activity under the performance-based restricted stock plans for the fiscal years ended 2013, 2012 and 2011 is presented below:

	2013		2012		2011	
	Awards Outstanding	Weighted-Average Grant Date Fair Value	Awards Outstanding	Weighted-Average Grant Date Fair Value	Awards Outstanding	Weighted-Average Grant Date Fair Value
Non-vested awards outstanding at beginning of year	73,458	\$38.01	101,730	\$31.19	115,250	\$27.09
Awards granted	47,625	47.10	22,120	41.27	20,630	47.89
Stock issued	(33,538)) 27.43	(43,750)) 23.86	—	—
Awards forfeited or expired	(16,370)) 44.90	(6,642)) 37.67	(34,150)) 27.43
Non-vested awards outstanding at end of year	71,175	\$47.49	73,458	\$38.01	101,730	\$31.19

We recognized \$1.3 million, \$0.5 million, and \$1.7 million of compensation expense related to performance-based restricted stock grants for the years ended December 31, 2013, 2012 and 2011, respectively. The 2013 expense represents a 108% projected payout for the 2011 performance-based grants, a projected payout of 108% for the performance-based awards granted in 2012 and a projected payout of 166% for the performance-based awards granted in 2013. The 2012 expense represents a 200% projected payout for the 2010 performance-based grants, and a projected payout of 100% for the performance-based awards granted in 2011 and 2012, respectively. The 2011 expense represented a 97.4% actual payout for the 2009 performance-based grants, and a projected payout of 200% for the performance-based awards granted in 2010 and 2011, respectively.

As of December 31, 2013, there was \$2.4 million of total unrecognized compensation cost related to unvested performance-based restricted stock. That cost is expected to be recognized over a weighted-average period of 1.4 years.

Time-Based Restricted Stock

In 2011, we began granting time-based restricted stock awards to certain key executives and other key members of the Company's management team. We currently have grants from 2011, 2012 and 2013 outstanding. The 2011 and 2012 grants cliff vest at the end of the three year vesting period. The 2013 grants ratably vest on the first, second and third anniversaries of the original grant date. We recognize compensation expense on all of these awards on a straight-line basis over the vesting period. The fair value of the award is determined based on the market value of the underlying stock price at the grant date.

	2013		2012		2011	
	Awards Outstanding	Weighted-Average Grant Date Fair Value	Awards Outstanding	Weighted-Average Grant Date Fair Value	Awards Outstanding	Weighted-Average Grant Date Fair Value
Non-vested awards outstanding at beginning of year	115,139	\$43.27	86,707	\$44.55	2,500	\$ 20.01
Awards granted	156,665	51.78	51,790	40.99	84,667	45.29
Stock issued	(12,436)	43.97	(16,620)	41.64	—	—
Awards forfeited or expired	(28,342)	47.07	(6,738)	46.21	(460)	47.89
Non-vested awards outstanding at end of year	231,026	\$48.54	115,139	\$43.27	86,707	\$ 44.55

We recognized \$2.5 million, \$1.6 million, and \$1.6 million of compensation expense related to time-based restricted stock for years ended December 31, 2013, 2012 and 2011, respectively. As of December 31, 2013, there was \$6.9 million of total unrecognized compensation cost related to unvested time-based restricted stock. That cost is expected to be recognized over a weighted-average period of 1.9 years.

Deferred Stock Units

We grant deferred stock units to non-management directors. These awards are fully vested on the date of grant and the related shares are generally issued on the 13th month anniversary of the grant date unless the individual elects to defer the receipt of these shares. Each deferred stock unit results in the issuance of one share of Rogers' stock. The grant of deferred stock units is typically done annually in the second quarter of each year. The fair value of the award is determined based on the market value of the underlying stock price at the grant date.

	2013		2012		2011	
	Awards Outstanding	Weighted-Average Grant Date Fair Value	Awards Outstanding	Weighted-Average Grant Date Fair Value	Awards Outstanding	Weighted-Average Grant Date Fair Value
Non-vested awards outstanding at beginning of year	30,150	\$26.13	27,350	\$28.80	30,250	\$ 28.98
Awards granted	16,800	41.67	17,600	38.64	16,650	45.95
Stock issued	(15,400)	41.77	(14,800)	45.95	(19,550)	43.69
Non-vested awards outstanding at end of year	31,550	\$26.77	30,150	\$26.13	27,350	\$ 28.8

We recognized compensation expense related to deferred stock units of \$0.7 million, \$0.7 million and \$0.7 million, for the years ended December 31, 2013, 2012 and 2011, respectively.

Employee Stock Purchase Plan

We have an employee stock purchase plan (ESPP) that allows eligible employees to purchase, through payroll deductions, shares of our common stock at a discount to fair market value. The ESPP has two 6 month offering periods each year, the first beginning in January and ending in June and the second beginning in July and ending in December. The ESPP contains a look-back feature that allows the employee to acquire stock at a 15% discount from the underlying market price at the beginning or end of the applicable period, whichever is lower. We recognize compensation expense on this plan ratably over the offering period based on the fair value of the anticipated number of shares that will be issued at the end of each offering period. Compensation expense is adjusted at the end of each offering period for the actual number of shares issued. Fair value is determined based on two factors:

88

(i) the 15% discount amount on the underlying stock's market value on the first day of the applicable offering period, and (ii) the fair value of the look-back feature determined by using the Black-Scholes model. We recognized approximately \$0.5 million of compensation expense associated with the plan for the year ended December 31, 2013 and \$0.5 million for the year ended December 31, 2012 and \$0.5 million for the year ended December 31, 2011.

NOTE 15 – COMMITMENTS AND CONTINGENCIES

Leases

Our principal noncancellable operating lease obligations are for building space and vehicles. The leases generally provide that we pay maintenance costs. The lease periods typically range from one to five years and include purchase or renewal provisions. We have leases that are cancellable with minimal notice. Additionally, we have a capital lease on our manufacturing facility in Eschenbach, Germany, which was entered into in 2011. Further, in 2013 we entered into an operating lease for the Rogers Innovation Center at Northeastern University in Burlington, Massachusetts. The lease term expires three years from the November 2014 inception date and lease payments are determined based upon square footage occupied by Rogers personnel during the lease period that currently amount to approximately \$10k per month. Further, under the lease arrangement, Rogers agreed to fund research activities for the University totaling a minimum of \$0.5 million annually over the three year term of the agreement.

(Dollars in thousands)	Lease / Depreciation Expense		
	2013	2012	2011
Operating leases	\$2,634	\$2,655	\$3,137
Capital lease	1,233	1,627	1,672

(Dollars in thousands)	Future Minimum Lease Payments				
	2014	2015	2016	2017	2018
Operating leases	\$1,938	\$1,089	\$848	\$419	\$234
Capital lease	849	843	843	843	843

(Dollars in thousands)	Operating Leases	Capital Lease
Total future minimum lease payments	\$4,565	\$6,328

We are currently engaged in the following environmental and legal proceedings:

Superfund Sites

We are currently involved as a potentially responsible party (PRP) in one active case involving a waste disposal site, the Chatham Superfund Site. The costs incurred since inception for this claim have been immaterial and have been primarily covered by insurance policies, for both legal and remediation costs. In this matter we have been assessed a cost sharing percentage of approximately 2% in relation to the range for estimated total cleanup costs of \$18.8 million to \$29.6 million. We have recorded a liability and related insurance receivable of approximately \$0.4 million as of December 31, 2013, which approximates our share of the low end of the estimated range. Based on facts presently known to us, we believe that the potential for the final results of this case having a material adverse effect on our results of operations, financial position or cash flows is remote. This case has been ongoing for many years and we believe that it will continue on for the indefinite future. No time frame for completion can be estimated at the present time.

PCB Contamination

We have been working with the Connecticut Department of Energy and Environmental Protection (CT DEEP) and the EPA, Region I, in connection with certain polychlorinated biphenyl (PCB) contamination at our facility in

Woodstock, Connecticut. The issue was originally discovered in the soil at the facility in the late 1990s, and this initial issue was remediated in 2000. Further contamination was later found in the groundwater beneath the property, which was addressed with the installation of a pump and treat system in 2011. Additional PCB contamination at this facility was uncovered in the original buildings, courtyards and surrounding areas including an on-site pond. Remediation activities of the affected building materials and courtyards were completed in 2013. Remediation costs related to the original buildings, courtyards and surrounding areas including an on-site

pond are expected to approximate \$1.0 million, which was recorded as our original liability during 2010. To date, we have incurred \$0.8 million in remediation costs related to the buildings and courtyards and anticipate that the remaining reserve of \$0.2 million will be adequate to cover the remaining remediation work related to the surrounding areas and pond.

To date, we have spent approximately \$1.9 million in remediation and monitoring costs related to these PCB contamination issues. The future costs related to the maintenance of the groundwater pump and treat system now in place at the site are expected to be minimal. We believe that the remaining remediation activity will continue for several more years and no time frame for completion can be estimated at the present time.

Asbestos Litigation

A significant number of asbestos-related product liability claims have been brought against numerous United States industrial companies where the third-party plaintiffs allege personal injury from exposure to asbestos-containing products. We have been named, along with hundreds of other companies, as a defendant in some of these claims. In virtually all of these claims filed against us, the plaintiffs are seeking unspecified damages, or, if an amount is specified, such amount merely represents a jurisdictional amount. However, occasionally specific damages are alleged and in such situations, plaintiffs' lawyers often sue dozens of defendants, frequently without factual basis or support. As a result, even when a specific amount of damages is alleged, such action can be arbitrary, both as to the amount being sought and the defendant being charged with such damages.

We did not mine, mill, manufacture or market asbestos; rather we made a limited number of products which contained encapsulated asbestos. Such products were provided to industrial users. We stopped manufacturing these products in the late 1980s.

Claims

We have been named in asbestos litigation primarily in Illinois, Pennsylvania and Mississippi. As of December 31, 2013, there were 362 pending claims compared to 319 pending claims at December 31, 2012. The number of pending claims at a particular time can fluctuate significantly from period to period depending on how successful we have been in getting these cases dismissed or settled. Some jurisdictions prohibit specifying alleged damages in personal injury tort cases such as these, other than a minimum jurisdictional amount which may be required for such reasons as allowing the case to be litigated in a jury trial (which the plaintiffs believe will be more favorable to them than if heard only before a judge) or allowing the case to be litigated in federal court. This is in contrast to commercial litigation, in which specific alleged damage claims are often permitted. The prohibition on specifying alleged damages sometimes applies not only to the suit when filed but also during the trial – in some jurisdictions the plaintiff is not actually permitted to specify to the jury during the course of the trial the amount of alleged damages the plaintiff is claiming. Further, in those jurisdictions in which plaintiffs are permitted to claim specific alleged damages, many plaintiffs nonetheless still choose not to do so. In those cases in which plaintiffs are permitted to and choose to assert specific dollar amounts in their complaints, we believe the amounts claimed are typically not meaningful as an indicator of a company's potential liability. This is because (1) the amounts claimed may bear no relation to the level of the plaintiff's injury and are often used as part of the plaintiff's litigation strategy, (2) the complaints typically assert claims against numerous defendants, and often the alleged damages are not allocated against specific defendants, but rather the broad claim is made against all of the defendants as a group, making it impossible for a particular defendant to quantify the alleged damages that are being specifically claimed against it and therefore its potential liability, and (3) many cases are brought on behalf of plaintiffs who have not suffered any medical injury, and ultimately are resolved without any payment or payment of a small fraction of the damages initially claimed. Of the 362 claims pending as of December 31, 2013, 69 claims do not specify the amount of damages sought, 291 claims cite jurisdictional amounts, and only two (2) claims (less than 1.0% of the total pending claims) specify the amount of damages sought not based on jurisdictional requirements. Of these two (2) claims, one (1) claim alleges compensatory and punitive damages of \$20 million each and one (1) claim alleges punitive damages of 20 million. These two (2) claims name between twenty-one (21) and twenty-nine (29) defendants. However, for the reasons cited above, we do not believe that this data allows for an accurate assessment of the relation that the amount of alleged damages claimed might bear to the ultimate disposition of these cases.

We believe the rate at which plaintiffs filed asbestos-related suits against us increased in 2001, 2002, 2003 and 2004 because of increased activity on the part of plaintiffs to identify those companies that sold asbestos-containing products, but which did not directly mine, mill or market asbestos. A significant increase in the volume of asbestos-related bodily injury cases arose in Mississippi in 2002. This increase in the volume of claims in Mississippi was apparently due to the passage of tort reform legislation (applicable to asbestos-related injuries), which became effective on September 1, 2003 and which resulted in a higher than average number of claims being filed in Mississippi by plaintiffs seeking to ensure their claims would be governed by the law in effect prior to the passage of tort reform. The number of asbestos related suits filed against us decreased slightly in 2005 and 2006, but increased slightly in 2007, declined in 2008 and increased again in 2009 and 2010. The number of lawsuits filed against us in 2011, 2012 and 2013 was significantly higher than in 2010. These new lawsuits are reflected in the National Economic Research Associates, Inc. ("NERA") and Marsh UA Inc. ("Marsh") reports. (See "Impact of Financials Statements" section below.)

Defenses

In many cases, plaintiffs are unable to demonstrate that they have suffered any compensable loss as a result of exposure to our asbestos-containing products. We continue to believe that a majority of the claimants in pending cases will not be able to demonstrate exposure or loss. This belief is based in large part on the limited number of asbestos-related products manufactured and sold by us and the fact that the asbestos was encapsulated in such products. In addition, even at sites where the presence of an alleged injured party can be verified during the same period those products were used, our liability cannot be presumed because even if an individual contracted an asbestos-related disease, not everyone who was employed at a site was exposed to the asbestos containing products that we manufactured. Based on these and other factors, we have and will continue to vigorously defend ourselves in asbestos-related matters.

Dismissals and Settlements

Cases involving us typically name 50-300 defendants, although some cases have had as few as one (1) and as many as 833 defendants. We have obtained dismissals of many of these claims. For the year ended December 31, 2013, one hundred fifteen (115) claims were dismissed and twenty-three (23) were settled. For the year ended December 31, 2012 we were able to have ninety-three (93) claims dismissed and sixteen (16) settled. The majority of costs have been paid by our insurance carriers, including the costs associated with the small number of cases that have been settled. Such settlements totaled approximately \$4.8 million for the year ended December 31, 2013, compared to 6.3 million for the year ended 2012 and such settlement amounts were paid by our insurance carriers. Although these figures provide some insight into our experience with asbestos litigation, no guarantee can be made as to the dismissal and settlement rates that we will experience in the future.

Settlements are made without any admission of liability. Settlement amounts may vary depending upon a number of factors, including the jurisdiction where the action was brought, the nature and extent of the disease alleged and the associated medical evidence, the age and occupation of the claimant, the existence or absence of other possible causes of the alleged illness of the alleged injured party and the availability of legal defenses, as well as whether the action is brought alone or as part of a group of claimants. To date, we have been successful in obtaining dismissals for many of the claims and have settled only a limited number. The majority of settled claims were settled for immaterial amounts, and the majority of such costs have been paid by our insurance carriers. In addition, to date, we have not been required to pay any punitive damage awards.

Potential Liability

National Economic Research Associates, Inc. (NERA), a consulting firm with expertise in the field of evaluating mass tort litigation asbestos bodily-injury claims, has historically been engaged to assist us in projecting our future asbestos-related liabilities and defense costs with regard to pending claims and future unasserted claims. Projecting future asbestos costs is subject to numerous variables that are extremely difficult to predict, including the number of claims that might be received, the type and severity of the disease alleged by each claimant, the long latency period associated with asbestos exposure, dismissal rates, costs of medical treatment, the financial resources of other companies that are co-defendants in claims, uncertainties surrounding the litigation process from jurisdiction to jurisdiction and from case to case and the impact of potential changes in legislative or judicial standards, including potential tort reform. Furthermore, any predictions with respect to these variables are subject to even greater uncertainty as the projection period lengthens. In light of these inherent uncertainties, the variability of our claims history and consultations with NERA, we currently believe that ten years is the most reasonable period for recognizing a reserve for future costs, and that costs that might be incurred after that period are not reasonably estimable at this time. As a result, we also believe that our ultimate asbestos-related contingent liability (i.e., our indemnity or other claim disposition costs plus related legal fees) cannot be estimated with certainty. (See "Impact of Financials Statements" section below for further discussion.)

Insurance Coverage

Our applicable insurance policies generally provide coverage for asbestos liability costs, including coverage for both resolution and defense costs. Following the initiation of asbestos litigation, an effort was made to identify all of our primary, umbrella and excess level insurance carriers that provided applicable coverage beginning in the 1950s through the mid-1980s. We located primary policies for all such years except for the early 1960s. With respect to this

period, we entered into an arrangement with ACE Property & Casualty Insurance Company in 2005, pursuant to which we and they share in asbestos liabilities allocable to such period. We have located umbrella or excess layer policies for all such years except for the period from May 18, 1961 to May 18, 1964. We believe that a policy was purchased from Continental Casualty Company covering this period based upon documents we have found, but the insurer has denied coverage. This policy has not yet been triggered.

Where appropriate, carriers were put on notice of the litigation. Marsh USA, Inc., also known as Marsh Risk Consulting (Marsh), a consulting firm with expertise in the field of evaluating insurance coverage and the likelihood of recovery for asbestos-related claims, has historically been engaged to work with us to project our insurance coverage for asbestos-related claims. Marsh's conclusions are based primarily on a review of our coverage history, application of reasonable assumptions on the allocation of

coverage consistent with certain industry practices, an assessment of the creditworthiness of the insurance carriers, analysis of applicable deductibles, retentions and policy limits, the experience of NERA and a review of NERA's reports.

Cost Sharing Agreement

To date, our insurance carriers have paid for substantially all of the settlement and defense costs associated with our asbestos-related claims. The current cost sharing agreement between us and such insurance carriers is primarily designed to facilitate the ongoing administration and payment of such claims by the carriers until the applicable insurance coverage is exhausted. The agreement, which replaced an older expired agreement, can be terminated by election of any part thereto after January 25, 2015. Absent any such election, the agreement will continue until a party elects to terminate it.

In 2013, the primary layer insurance policies providing coverage for the January 1, 1966 to January 1, 1967 period exhausted. The cost sharing agreement contemplates that any excess carrier over exhausted primary layer carriers will become a party to the cost sharing agreement, replacing the coverage provided by the exhausted primary policies if the carrier providing such excess coverage is not already a party to the cost sharing agreement. The excess carrier providing coverage for the period set forth above is currently providing applicable insurance coverage in accordance with the allocation provisions of the cost sharing agreement, but has not yet signed that agreement.

Impact on Financial Statements

The models developed for determining the potential exposure and related insurance coverage were developed by outside consultants deemed to be experts in their respective fields with the forecast for asbestos related liabilities generated by NERA and the related insurance receivable projections developed by Marsh. The models contain numerous assumptions that significantly impact the results generated by the models. We believe the assumptions made are reasonable at the present time, but are subject to uncertainty based on the actual future outcome of our asbestos litigation. Historically, due to the inherent uncertainties of the forecast process and our limited amount of settlement and claims history, we utilized a forecast period of five years, which we concluded was the most reasonable period for recognizing a reserve for projected asbestos liabilities, and that costs that might be incurred after that period were not reasonably estimable at that time. In 2012, we reviewed this assumption and determined that it was appropriate to extend the forecast period from five years to ten years. We reached this conclusion due to the fact that we now have considerably more experience in addressing asbestos related lawsuits and have a longer history of activity to use as a baseline to more accurately project the liability over a longer period than previously disclosed. Also, settlement trends have become more meaningful in recent years and we believe that we now have a more meaningful history of data on which to base our projections. Further, we determined that a 10 year projection period is now appropriate as, although we have a longer and more consistent history of data over the last few years, we do not believe we have sufficient data to justify a longer projection period at this time. As of December 31, 2013, the estimated liability and estimated insurance recovery for the ten-year period through 2023 was \$59.7 million and \$57.1 million, respectively. For sensitivity purposes, if the forecast period was decreased to five years, the projected liability and related insurance recovery would be \$34.9 million and \$33.6 million, respectively. Also, if the forecast period was increased to fifteen years, the projected liability and related insurance recovery would be \$77.2 million and \$73.2 million, respectively.

The amounts recorded for the asbestos-related liability and the related insurance receivables described above were based on facts known at the time and a number of assumptions. However, projecting future events, such as the number of new claims to be filed each year, the average cost of disposing of such claims, the length of time it takes to dispose of such claims, coverage issues among insurers and the continuing solvency of various insurance companies, as well as the numerous uncertainties surrounding asbestos litigation in the United States could cause the actual liability and insurance recoveries for us to be higher or lower than those projected or recorded.

There can be no assurance that our accrued asbestos liabilities will approximate our actual asbestos-related settlement and defense costs, or that our accrued insurance recoveries will be realized. We believe that it is reasonably possible that we will incur additional charges for our asbestos liabilities and defense costs in the future, which could exceed existing reserves, but such excess amount cannot be reasonably estimated at this time. We will continue to vigorously

defend ourselves and believe we have substantial unutilized insurance coverage to mitigate future costs related to this matter.

Other Environmental and General Litigation

In the second quarter of 2010, the CT DEEP contacted us to discuss a disposal site in Killingly, Connecticut. We have initiated internal due diligence work related to the site to better understand the issue and our alleged involvement. As a matter of procedure, we have submitted an insurance claim for the disposal site, but we currently do not know the nature and extent of any alleged contamination at the site, how many parties could be potentially involved in any remediation, if necessary, or the extent to which we could be deemed a potentially responsible party. CT DEEP has not made any assessment of the nature of any potential remediation work that may be done, nor have they made any indication of any potential costs associated with such remediation. Therefore, based on the facts and circumstances known to us at the

present time, we are not able to estimate the probability of incurring a contingent liability related to this site, nor are we able to reasonably estimate any potential range of exposure at this time. As such, no reserve has been established for this matter at this time. We continually monitor this situation and are in correspondence with the CT DEEP as appropriate. When and if facts and circumstances related to this matter change, we will review our position and our ability to estimate the probability of any potential loss contingencies, as well as the range of any such potential exposure.

The Rogers Corporate Headquarters located in Rogers, Connecticut is part of the Connecticut Voluntary Corrective Action Program (VCAP). As part of this program, we have had conversations with the CT DEEP to begin to determine if any corrective actions need to be taken at the site related to any potential contamination issues. We are currently in the early stages of evaluating this matter and have initiated internal due diligence work related to the site to better understand any potential issues. However, at this time, it is currently unknown what the nature and extent of any potential contamination is at the site, nor what any potential remediation or associated costs would be if any such issues were found. Therefore, based on the facts and circumstances known to us at the present time, we are unable to estimate the probability of incurring a contingent liability related to this site, nor are we able to reasonably estimate any potential range of exposure at this time. As such, no reserve has been established for this matter at this time.

In 2013, we became aware of a claim made by a sales agent/distributor in Europe for the alleged improper termination of our relationship. The sales agent/distributor seeks compensation for the terminated relationship. At this point in time, we are very early in the process and can not reasonably assess the probability of an unfavorable outcome related to this matter, nor reasonably estimate any potential contingent liability based upon the facts and circumstances known to us at this time. As such, no reserve has been established for this matter at this time.

In addition to the above issues, the nature and scope of our business brings us in regular contact with the general public and a variety of businesses and government agencies. Such activities inherently subject us to the possibility of litigation, including environmental and product liability matters that are defended and handled in the ordinary course of business. We have established accruals for matters for which management considers a loss to be probable and reasonably estimable. Environmental remediation costs are recorded in "Selling and administrative expenses" on our consolidated statements of income (loss). It is the opinion of management that facts known at the present time do not indicate that such litigation, after taking into account insurance coverage and the aforementioned accruals, will have a material adverse impact on our results of operations, financial position, or cash flows.

NOTE 16 – BUSINESS SEGMENT AND GEOGRAPHIC INFORMATION

Our reporting structure is comprised of the following operating segments: High Performance Foams (HPF), Printed Circuit Materials (PCM), Power Electronics Solutions (PES) and the Other reportable segment. In the fourth quarter of 2013, we determined that a realignment of our segment structure was appropriate in order to present our financial results in a manner consistent with how management operates the business. Our previous reporting structure was comprised of the following operating segments: High Performance Foams, Printed Circuit Materials, Curamik Electronic Solutions and Power Distribution Systems and the Other reportable segment.

In the new structure, we will present three operating segments - High Performance Foams, Printed Circuit Materials, and Power Electronics Solutions and the Other reportable segment. During 2013, the management of the Curamik Electronic Solutions and Power Distribution Systems operations was combined under one segment management team and the former operating segments now meet the reporting definition of product lines, as the management team has full cross functional and regional responsibility over all aspects of these product lines. Information is reported to the Chief Operating Decision Maker (the President and Chief Executive Officer of Rogers) at the Power Electronic Solutions operating segment level. We believe this structure aligns our external reporting presentation with how we

currently manage and view our business internally. All prior periods herein have been recast to support this change.

High Performance Foams

The High Performance Foams operating segment includes polyurethane and silicone foam products manufactured in roll stock, sheet, and molded formats. These foams have characteristics that offer functional advantages in many market applications which serve to differentiate Rogers' products from other commonly available materials.

High Performance Foams products are sold globally to converters, fabricators, distributors and original equipment manufacturers (OEMs) for use in general industrial applications, portable communications, consumer goods, transportation, printing applications and other markets. Trade names for our High Performance Foams include: PORON® urethane foams used for making high performance gaskets and seals in vehicles, portable communications devices, computers and peripherals; PORON® cushion insole

materials for footwear and related products; PORON® healthcare and medical materials for body cushioning and orthotic appliances; R/bak® compressible printing plate backing and mounting products for cushioning flexographic plates for printing on packaging materials; PORON® and XRD® for high impact cushioning protection; BISCO® silicone foams, solids, sponge and extrusion products for flame retardant gaskets, seals and cushioning applications in communications infrastructure equipment, aircraft, trains, cars and trucks, and for shielding extreme temperature or flame; and eSORBA® urethane foams used in portable communications, entertainment devices and other industrial applications.

We have two 50% owned joint ventures that extend and complement our worldwide business in High Performance Foams. Rogers INOAC Corporation (RIC), a joint venture with Japan-based INOAC Corporation, manufactures high performance polyurethane foam materials in Mie and Taketoyo, Japan to predominantly serve the Japanese and Taiwanese markets. Rogers INOAC Suzhou Corporation (RIS) was established in 2004 with INOAC Corporation and provides polyurethane foam materials primarily to the Asian marketplace.

Printed Circuit Materials

The Printed Circuit Materials operating segment includes printed circuit board laminate products for high frequency, high performance applications. These products have characteristics that offer performance and other functional advantages in many market applications, and serve to differentiate our products from other commonly available materials. These products are sold principally to independent and captive printed circuit board fabricators that convert our laminates to custom printed circuits.

The polymer-based dielectric layers of our circuit board laminates are proprietary materials that provide highly specialized electrical and mechanical properties. Trade names for our printed circuit board materials include RO3000®, RO4000®, RT/duroid®, ULTRALAM®, RO2800® and TMM® laminates. All of these laminates are used for making circuitry that receive, transmit, and process high frequency communications signals, yet each laminate has varying properties that address specific needs and applications within the communications market. High frequency circuits are used in the equipment and devices that comprise wireless communications systems, including cellular communications, digital cellular communications, paging, direct broadcast television, global positioning, mobile radio communications, and radar for both aviation and automotive applications.

Power Electronics Solutions

The Power Electronics Solutions operating segment is comprised of direct copper bonded (DCB) ceramic substrate products and RO-LINX® power distribution products. We believe that our advanced, customized components enable the performance and reliability of today's growing array of power electronic devices and serve to increase the efficiency of applications by managing heat and ensuring the reliability of these critical devices used in converting raw energy into controlled and regulated power that can be used and managed.

Trade names for our Power Electronics Solutions products include curamik® ceramic substrates and RO-LINX® products. Curamik® ceramic substrates are used in the design of intelligent power management devices, such as insulated gate bipolar transistor (IGBT) modules, which enable a wide range of products including highly efficient industrial motor drives, wind and solar converters and electric and hybrid electric vehicle drive systems. RO-LINX® products are used in high power electrical inverter and converter systems for use in mass transit (e.g. high speed trains); clean technology applications (e.g. wind turbines, solar farms and electric vehicles) and variable frequency drives for high to mid power applications.

Other

The Other reportable segment consists of elastomer components, floats and inverter distribution activities. Elastomer components are sold to OEMs for applications in ground transportation, office equipment, consumer and other markets. Trade names for our elastomer components include: NITROPHYL® floats for level sensing in fuel tanks,

motors, and storage tanks and ENDUR® elastomer rollers and belts for document handling in copiers, printers, mail sorting machines and automated teller machines. Inverters are sold primarily to OEMs and fabricators that in turn sell to various other third parties primarily serving the portable communication and automotive markets.

This segment previously included the results of the Composite Materials operating segment, which qualified as a discontinued operation in the fourth quarter of 2012 when we shut down production of non-woven composite materials. This segment also included the results of the Thermal Management Solutions operating segment, which qualified as a discontinued operation in 2011. All results have been recast to exclude these segments from consolidated results or continuing operations.

The following table sets forth the information about our reportable segments for the periods indicated:

(Dollars in thousands)	High Performance Foams	Printed Circuit Materials	Power Electronics Solutions	Other	Total
2013					
Net sales	\$ 168,082	\$ 184,949	\$ 160,730	\$ 23,721	\$ 537,482
Operating income (loss)	22,339	18,788	1,088	7,065	49,280

2011					
Net sales	\$ 177,645	\$ 166,424	\$ 180,234	\$ 24,038	\$ 548,341
Operating income (loss)	28,280	11,127	11,320	2,755	53,482
Total assets	192,829	123,883	338,418	21,655	676,785
Capital expenditures	5,325	5,901	9,362	728	21,316
Depreciation & amortization	7,873	6,348	10,989	1,098	26,308
Investment in unconsolidated joint ventures	23,868	—	—	—	23,868
Equity income (loss) in unconsolidated joint ventures	5,451	—	—	—	5,451

Inter-segment sales have been eliminated from the sales data in the preceding table.

The following table sets forth the operating income (loss) reconciliation to the consolidated statements of income (loss) for the periods indicated:

	2013	2012	2011
Operating income (loss)	\$ 49,280	\$ 25,664	\$ 53,482
Equity income in unconsolidated joint ventures	4,326	4,743	5,451
Other income (expense), net	(1,240)	(208)	1,942
Net realized investment gain (loss)	—	(3,245)	(196)
Interest income (expense), net	(3,481)	(4,304)	(4,911)
Income (loss) before income tax expense (benefit)	\$ 48,885	\$ 22,650	\$ 55,768

Information relating to our operations by geographic area is as follows:

(Dollars in thousands)	Net Sales (1)			Long-lived Assets (2)		
	2013	2012	2011	2013	2012	2011
United States	\$118,263	\$115,035	\$109,581	\$64,545	\$64,845	\$65,432
Asia	275,969	250,682	271,132	68,613	69,830	64,181
Europe	132,126	123,040	154,423	171,615	172,671	177,196
Other	11,124	10,004	13,205	—	—	—
Total	\$537,482	\$498,761	\$548,341	\$304,773	\$307,346	\$306,809

(1) Net sales are allocated to countries based on the location of the customer.

(2) Long-lived assets are based on the location of the asset and are comprised of goodwill and other intangibles and property, plant and equipment.

NOTE 17 – RESTRUCTURING AND IMPAIRMENT CHARGES

2013

In 2013, we recognized approximately \$10.4 million of restructuring and impairment charges. Approximately \$5.7 million of these charges are related to the streamlining initiatives that began in 2012 as we incurred approximately \$4.2 million in severance and related charges as a result of these activities as well as changes to the executive management team and we recognized a \$1.5 million curtailment charge related to the freezing of the defined benefit pension plans. Further in 2013, we recognized a \$4.6 million charge related to the impairment of the investment in Solicore, Inc. As this investment does not relate to any of our operating segments, we have allocated this impairment charge on a basis similar to other Corporate allocations. See Note 9 - Investment for further details on this write-down.

2012

In 2012, we began several initiatives to streamline our organization and rationalize our cost structure in order to better position the Company for profitable growth in the future. The goal of these initiatives is to become a more streamlined organization both from an organizational and cost perspective, with efficient manufacturing capabilities that are focused on meeting our customers' needs.

During 2012, we recorded approximately \$15.9 million in restructuring and impairment charges (of which \$1.8 million was recorded in "Cost of Sales" and \$14.1 million was recorded in "Restructuring and impairment expense" on our consolidated statement of income (loss)). These charges were comprised of the following:

- \$7.1 million severance and related costs associated with streamlining initiatives, including an early retirement program for certain eligible individuals. As a result of the early retirement program, we incurred \$1.6 million in charges in 2012 related to a special termination benefit associated with the retirement health and life insurance benefits program, as we extended eligibility benefits to certain individuals who chose to participate in the program. We incurred \$5.5 million of severance charges related primarily to the early retirement program.

- \$3.8 million severance and related costs associated with moving the Curamik inspection process from Germany to Hungary;

- \$3.3 million related to the shut-down of the High Performance Foams manufacturing facility in Bremen, Germany. This charge includes approximately \$1.4 million of shut-down related costs, \$0.9 million of severance charges, \$0.8 million of accelerated depreciation on certain assets, and \$0.2 million of inventory related charges;

- \$0.5 million of charges related to the shut-down of Power Distribution Systems startup operations in North America for accelerated depreciation on certain assets, along with \$0.1 million of other costs associated with the shut-down;

- Other charges included, \$0.4 million of accelerated depreciation of certain assets of Curamik, \$0.3 million impairment charge relate to an investment related receivable, and a \$0.4 million impairment charge on a license agreement.

High Performance Foams

In the second quarter of 2012, we announced the shut-down of the High Performance Foams manufacturing facility in Bremen, Germany. This shut-down was completed in the first quarter of 2013. The manufacture of certain silicone foam materials produced in the Bremen facility was consolidated into our existing silicone foam manufacturing facility in Carol Stream, Illinois, while certain product lines were discontinued. Charges related to the shut-down of the facility include the following: \$0.9 million of severance charges related to the termination of certain employees, \$0.8 million of accelerated depreciation expense on certain assets that were no longer to be used in production, \$0.2 million of inventory related charges and \$0.1 million related to a fixed asset disposal. We

also incurred an additional \$1.4 million in costs related to the shut-down of the facility and other costs to remove and transport certain equipment to Carol Stream. In 2012, we recorded \$1.0 million as restricted cash related to early termination of the Bremen Facility lease. This amount was paid to the lessor in the first quarter of 2013.

The High Performance Foams operating segment also recognized \$2.2 million in allocated severance and related costs associated with the streamlining initiatives and early retirement program.

Printed Circuit Materials

The Printed Circuit Materials operating segment recognized \$2.9 million in allocated severance and related costs associated with the streamlining initiatives and early retirement program.

Power Electronics Solutions

In the third quarter of 2012, we announced a plan to move the final inspection stage of manufacturing operations in the facility in Eschenbach, Germany to Hungary. The move is expected to enable more cost effective performance of the inspection operation and was completed in 2013. We recognized approximately \$3.8 million in severance charges related to the separation from employment of certain employees at the facility in Germany. We also recorded \$0.4 million of accelerated depreciation related to certain assets.

We incurred \$0.5 million in accelerated depreciation associated with the shut-down of the busbar power distribution startup operation in North America, along with \$0.1 million of other costs associated with the shut-down. We also incurred \$0.3 million in expense related to the impairment of an investment receivable.

The PES operating segment recognized \$1.4 million in allocated severance and related costs associated with the streamlining activities and early retirement program.

Other

We incurred a charge of \$0.4 million related to the write off of a license agreement formerly associated with the discontinued Thermal Management Solutions operating segment. We also recognized \$0.3 million in allocated severance and related costs associated with the streamlining activities and early retirement program.

The following table summarizes the restructuring and impairment charges related to these activities recorded in our operating results in 2013.

(Dollars in thousands)

	December 31, 2013	December 31, 2012	December 31, 2011
Cost of Sales			
High Performance Foams			
Accelerated depreciation expense related to Bremen shut-down	\$—	\$764	\$—
Inventory impairment related to Bremen shut-down	—	191	—
Union ratification bonus	181	—	—
Printed Circuit Materials			
Union ratification bonus	179	—	—
Power Electronics Solutions			
Accelerated depreciation related to certain assets	—	393	—
Accelerated depreciation expense related to U.S. shut-down	—	499	—
Union ratification bonus	8	—	—
Total charges for Cost of Sales	\$368	\$1,847	\$—
Restructuring and Impairment			
High Performance Foams			
Fixed asset disposal (1)	\$—	\$79	\$441
Severance related to Bremen shut-down	1,345	861	—
Bremen shut down-costs	—	1,442	—
Allocated severance and related costs	—	2,188	—
Allocated Solicore impairment	1,617	—	—
Printed Circuit Materials			
Allocated severance and related costs	802	2,915	—
Allocated Solicore impairment	1,617	—	—
Power Electronics Solutions			
Impairment of investment related receivable	—	264	—
Severance and related costs	3,494	1,799	—
Severance related to Hungary move	—	3,774	—
PDS North America shut-down costs			
Allocated Solicore impairment	1,155	—	—
Other			
License agreement expense	—	356	—
Allocated severance and related costs	115	255	—
Allocated Solicore impairment	231	—	—
Total charges for Restructuring and Impairment	\$10,376	\$14,082	\$441

(1) In the first quarter of 2012, we signed an agreement to sell our facility in Richmond, Virginia for \$1.5 million. This facility had a book value of approximately \$1.8 million prior to the signing of the agreement, and we recorded an impairment charge of approximately \$0.4 million as of December 31, 2011, which represents the write down to the selling price minus approximately \$0.1 million of estimated selling costs. The transaction closed in the second quarter of 2012.

The following table summarizes charges in the severance accrual from January 1, 2013 through December 31, 2013:

(Dollars in thousands)	Streamlining and restructuring related activities	Bremen facility shut down	Curamik finishing operations relocation to Hungary	Total
Balance at January 1, 2013	\$1,573	\$—	\$4,035	\$5,608
Provisions	4,174	—	—	4,174
Payments	(4,651) —	(4,035) (8,686
Balance at December 31, 2013	\$1,096	\$—	\$—	\$1,096

Balances may differ from prior periods due to foreign exchange rate fluctuations.

NOTE 18 – DISCONTINUED OPERATIONS

In the fourth quarter of 2011, we made the strategic decision to end the operations of our Thermal Management Solutions operating segment. We had invested in its operations for the previous few years, but had difficulty gaining traction in the market and working through issues in the manufacturing process. Therefore, we determined that we would not achieve future success in this operation and chose to shut down operations rather than invest further. There was no activity for this segment in 2013. For the years ended December 31, 2012 and 2011, operating losses of \$0.1 million and \$6.8 million, net of tax, respectively, were reflected as discontinued operations in the accompanying consolidated statements of income (loss). Net sales associated with the discontinued operations for the years ended December 31, 2012 and 2011 were 0.1 million and 0.9 million, respectively. The tax related to the discontinued operations was de minimus for 2013 and 2012 and was \$0.1 million for 2011.

In the second quarter of 2012, we decided to cease production of our non-woven composite materials operating segment located in Rogers, Connecticut. Sales of non-woven products had been steadily declining for several years and totaled approximately \$5.3 million and \$4.8 million for the years ended December 31, 2012 and 2011, respectively. Manufacturing operations ceased by the end of 2012 and last sales out of inventory occurred in the first quarter of 2013. For the year ended December 31, 2013, net operating income of \$0.1 million was reflected as discontinued operations in the accompanying consolidated statement of income (loss). Net sales for 2013 were \$0.2 million and tax related to the discontinued operation was \$0.1 million for the year ended December 31, 2013. For the years ended December 31, 2012 and 2011 operating losses of \$0.1 million and \$0.4 million, net of tax, respectively, were reflected as discontinued operations in the accompanying consolidated statements of income (loss). The tax related to the discontinued operations was de minimis for the year ended December 31, 2012 and \$0.2 million for the year ended December 31, 2011.

NOTE 19 - QUARTERLY RESULTS OF OPERATIONS

(Dollars in thousands, except per share amounts)

	2013

Basic	\$(0.10) \$0.40	\$3.60	\$0.31
Diluted	(0.10) 0.39	3.48	0.30

NOTE 20 - RECENT ACCOUNTING STANDARDS

Comprehensive Income

In January 2013, the Financial Accounting Standards Board issued an update which seeks to improve the reporting of reclassifications out of accumulated other comprehensive income. This change requires an entity to report the effect of significant reclassifications out of accumulated other comprehensive income on the respective line items in net income if the amount being reclassified is required under U.S. GAAP to be reclassified in its entirety to net income. For other amounts that are not required under U.S. GAAP to be reclassified in their entirety to net income in the same reporting period, an entity is required to cross-reference other disclosures required under U.S. GAAP that provide additional detail about those amounts. This update supersedes the presentation requirements for reclassifications out of accumulated other comprehensive income in Accounting Standards Update (ASU) No. 2011-05, Presentation of Comprehensive Income, and ASU No. 2011-12, Deferral of the Effective Date for Amendments to the Presentation of Reclassifications of Items Out of Accumulated Other Comprehensive Income in Accounting Standards Update No. 2011-05. This update is effective for the reporting periods beginning after December 15, 2012, which was our first quarter of fiscal year 2013. The adoption of the update is reflected in Note 5 - "Accumulated other comprehensive income (loss)" but has not impacted our financial condition or results of operations.

Balance Sheet

In December 2011, the FASB issued ASU No. 2011-11, Disclosures about Offsetting Assets and Liabilities (ASU No. 2011-11). ASU No. 2011-11 amended ASC 210, Balance Sheet, to converge the presentation of offsetting assets and liabilities between U.S. Generally Accepted Accounting Principles (GAAP) and International Financial Reporting Standards (IFRS). ASU No. 2011-11 requires that entities disclose both gross information and net information about both instruments and transactions eligible for offset in the statement of financial position and instruments and transactions subject to an agreement similar to a master netting arrangement. ASU No. 2011-11 is effective for fiscal years, and interim periods within those years, beginning after January 1, 2013. The adoption of ASU No. 2011-11 did not require additional disclosures related to offsetting assets and liabilities and did not materially impact our financial condition or results of operations.

NOTE 21 - SUBSEQUENT EVENTS

There were no events subsequent to December 31, 2013 that we believe could have a material effect on our financial statements as of December 31, 2013, or are of such significance that would require mention as a subsequent event in order to make the financial statements not misleading.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures

EVALUATION OF DISCLOSURE CONTROLS AND PROCEDURES

The Company, with the participation of our Chief Executive Officer and Chief Financial Officer, conducted an evaluation of the design and operation of our disclosure controls and procedures, as defined in Rule 13a-15(e) under the Securities Exchange Act of 1934, as amended (the "Exchange Act"), as of December 31, 2013. The Company's disclosure controls and procedures are designed (i) to ensure that information required to be disclosed by it in the reports that it files or submits under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms and (ii) to ensure that information required to be disclosed in the reports the Company files or submits under the Exchange Act is accumulated and communicated to its management, including its Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure. Based on their evaluation, our Chief Executive Officer and Chief Financial Officer have concluded that the Company's disclosure controls and procedures were effective as of December 31, 2013.

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

The management of the Company is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Exchange Act Rule 13a-15(f). The Company's internal control system was designed to provide reasonable assurance to the Company's management, Board of Directors and shareholders regarding the preparation and fair presentation of the Company's published financial statements in accordance with generally accepted accounting principles. Our internal control over financial reporting includes those policies and procedures that:

- pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of our assets;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures are being made only in accordance with authorizations of our management and directors; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of our assets that could have a material effect on the financial statements.

All internal control systems, no matter how well designed, have inherent limitations. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation.

Management assessed the effectiveness of the Company's internal control over financial reporting as of December 31, 2013. In making its assessment of internal control over financial reporting, management used the criteria issued by the Committee of Sponsoring Organizations of the Treadway Commission (1992 framework) (COSO) in Internal Control-Integrated Framework. Based on the results of this assessment, management, including our Chief Executive Officer and our Chief Financial Officer, has concluded that, as of December 31, 2013, our internal control over financial reporting was effective.

The Company's independent registered public accounting firm, Ernst & Young LLP, has also issued an audit report on the Company's internal control over financial reporting, which report appears herein below.

CHANGES IN INTERNAL CONTROL OVER FINANCIAL REPORTING

There were no changes in the Company's internal control over financial reporting during the fourth quarter of the fiscal year ended December 31, 2013 that have materially affected or are reasonably likely to materially affect its internal control over financial reporting, as defined in Rule 13a-15(f) under the Exchange Act.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Shareholders of Rogers Corporation

We have audited Rogers Corporation's internal control over financial reporting as of December 31, 2013, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (1992 framework) (the COSO criteria). Rogers Corporation's management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying management's report on internal control over financial reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Rogers Corporation maintained, in all material respects, effective internal control over financial reporting as of December 31, 2013, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated statements of financial position of Rogers Corporation as of December 31, 2013 and 2012, and the related consolidated statements of income (loss), shareholders' equity, comprehensive income (loss) and cash flows for each of the three years in the period ended December 31, 2013 of Rogers Corporation and our report dated February 24, 2014 expressed an unqualified opinion thereon.

Item 9B. Other Information

None.

Part III

Item 10. Directors, Executive Officers and Corporate Governance

Pursuant to General Instruction G to Form 10-K, there is hereby incorporated by this reference the information with respect to the Directors, Executive Officers and Corporate Governance set forth under the captions “Nominees for Director”, “Director Qualifications and Experience”, “Section 16(a) Beneficial Ownership Reporting Compliance” and “Board of Directors - Meetings of Certain Committees” in our Definitive Proxy Statement for our 2014 Annual Meeting of Shareholders that will be filed within 120 days after the end of our fiscal year pursuant to Section 14(a) of the Exchange Act. Information with respect to Executive Officers of the Company is presented in Part I, Item 1 of this report and is hereby incorporated into this Item 10 by reference.

Code of Ethics

We have adopted a code of business conduct and ethics policy, which applies to all employees, officers and directors of Rogers Corporation. The Rogers Corporation Code of Business Conduct and Ethics Policy is posted on our website at <http://www.rogerscorp.com>. We intend to satisfy the disclosure requirements regarding any amendment to, or waiver of, a provision of the Code of Business Conduct and Ethics Policy for the Chief Executive Officer, Principal Financial Officer, Principal Accounting Officer or Controller (or others performing similar functions) by posting such information on our website. Our website is not incorporated into or a part of this Form 10-K.

Item 11. Executive Compensation

Pursuant to General Instruction G to Form 10-K, there is hereby incorporated by this reference the information with respect to Executive Compensation set forth under the captions “Board of Directors - Directors' Compensation”, “Board of Directors - Meetings of Certain Committees”, “Compensation Discussion and Analysis”, “Compensation and Organization Committee Report” and “Executive Compensation” in our Definitive Proxy Statement for our 2014 Annual Meeting of Shareholders that will be filed within 120 days after the end of our fiscal year pursuant to Section 14(a) of the Exchange Act.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

EQUITY COMPENSATION PLAN INFORMATION

The table and footnotes below describe those equity compensation plans approved and not approved by security holders of Rogers Corporation as of December 31, 2013, the end of the Company's fiscal year.

EQUITY COMPENSATION PLANS AS OF DECEMBER 31, 2013

Plan Category	(a) Number of securities to be issued upon exercise of outstanding options, warrants and rights (5)	(b) Weighted average exercise price of outstanding options, warrants and rights (5)	(c) Number of securities remaining available for future issuance under each equity compensation plan excluding securities referenced in column (a) (6)
Equity Compensation Plans Approved by Security Holders			
Rogers Corporation 1988 Stock Option Plan	18,000	\$58.96	—
Rogers Corporation 1994 Stock Compensation Plan	10,525	58.05	—
Rogers Corporation 1998 Stock Incentive Plan	47,519	49.24	—
Rogers Corporation 2005 Equity Compensation Plan	291,473	46.53	—
Rogers Corporation 2009 Long-Term Equity Compensation Plan	319,214	32.18	479,307
Rogers Corporation Global Stock Ownership Plan For Employees (1)	—	—	181,617
Equity Compensation Plans Not Approved by Security Holders			
Rogers Corporation 1990 Stock Option Plan (2)	183,208	52.98	—
Rogers Corporation Stock Acquisition Program (3)	—	—	120,883
Inducement Awards for the CEO when he joined Rogers (4)	23,200	37.05	—
Total (5)	893,139	\$43.01	781,807

(1) This is an employee stock purchase plan within the meaning of Section 432(b) of the Internal Revenue Code of 1986, as amended.

The Rogers Corporation 1990 Stock Option Plan was adopted in 1990 to award certain key employees of Rogers with stock option grants. Under this plan, options generally have an exercise price equal to at least the fair market value of Rogers' stock as of the date of grant. Regular options generally have a ten-year life and generally vest in one-third increments on the second, third and fourth anniversary dates of the grant, except for the grants made to (2) most employees in 2004 and 2005. Such 2004 and 2005 stock options were immediately vested upon grant, but any shares acquired upon option exercise during the first four years after the grant date could not be sold during the four year period if the individual was still actively employed at Rogers. Termination of employment because of retirement, or for certain other reasons, may shorten the vesting schedule, the expiration date or eliminate the aforementioned sales restriction.

The purpose of the Stock Acquisition Program is to enable non-management directors and executive officers to (3) acquire shares of Rogers' common stock in lieu of cash compensation at the then current fair market value of such common stock.

(4)

Bruce D. Hoechner was granted three equity awards when he joined Rogers Corporation as its new President and Chief Executive Officer in October of 2011. This consisted of two time-based restricted stock unit awards with different vesting schedules and the non-qualified stock option, shown in the table above. The Board of Directors (including a majority of its independent directors) approved these equity inducement awards in reliance on an employment inducement exception to shareholder approval provided for in the New York Stock Exchange governance rules.

(5) Does not include deferred stock units, restricted stock or phantom stock units. As of 12/31/2013, 33,250 shares were reserved for deferred stock unit awards, 387,467 shares were reserved for restricted stock awards and 14,558 shares were reserved for phantom stock units related to the deferral of compensation ultimately to be paid in Rogers stock.

(6) On May 7, 2009, shareholders approved the Rogers Corporation 2009 Long-Term Equity Compensation Plan and as of that date no further equity awards will be made pursuant to the provisions of the Rogers Corporation (i) 1988 Stock Option Plan, (ii) 1994 Stock Compensation Plan, (iii) 1998 Stock Incentive Plan, (iv) 2005 Equity Compensation Plan and (v) 1990 Stock Option Plan. For this reason a zero (i.e. a dash) appears in the applicable rows of this column. The number for the 2009 Long-Term Equity Compensation Plan has been reduced by shares reserved for restricted stock awards and deferred stock units.

Pursuant to General Instruction G to Form 10-K, there is hereby incorporated by this reference the information with respect to Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters set forth under the captions “Stock Ownership of Management” and “Beneficial Ownership of More Than Five Percent of Rogers Stock” in our Definitive Proxy Statement for our 2014 Annual Meeting of Shareholders that will be filed within 120 days after the end of our fiscal year pursuant to Section 14(a) of the Exchange Act.

Item 13. Certain Relationships and Related Transactions, and Director Independence

Pursuant to General Instruction G to Form 10-K, there is hereby incorporated by this reference the information with respect to Certain Relationships and Related Transactions and Director Independence as set forth under the captions “Related Party Transactions” and “Board of Directors-Director Independence” in our Definitive Proxy Statement for our 2014 Annual Meeting of Shareholders that will be filed within 120 days after the end of our fiscal year pursuant to Section 14(a) of the Exchange Act.

Item 14. Principal Accountant Fees and Services

Pursuant to General Instruction G to Form 10-K, there is hereby incorporated by this reference the information with respect to Accountant Fees and Services set forth under the caption “Fees of Independent Registered Public Accounting Firm” in our Definitive Proxy Statement for our 2014 Annual Meeting of Shareholders that will be filed within 120 days after the end of our fiscal year pursuant to Section 14(a) of the Exchange Act.

Part IV

Item 15. Exhibits, Financial Statement Schedules

(1) Financial Statements and Schedules - See Item 8.

The following consolidated financial statements of the Company are included in Item 8 of this Form 10-K:

Report of Independent Registered Public Accounting Firm
Consolidated Statements of Financial Position
Consolidated Statements of Income (Loss)
Consolidated Statements of Shareholders' Equity
Consolidated Statements of Comprehensive Income (Loss)
Consolidated Statements of Cash Flows
Notes to Consolidated Financial Statements

Schedule II- Valuation and Qualifying Accounts

(2) Financial Statement Schedules.

Other than as set forth above, schedules are omitted because they are not applicable, or are not required, or because the information is included in the consolidated financial statements and notes thereto.

(3) Exhibits.
