Significant accounting policies are as follows:

Portfolio Valuation. Investments are stated at value. All securities for which market quotations are readily available are valued at the last sales price prior to the time of determination of net asset value, or, if no sales price is available at that time, at the closing price last quoted for the securities (but if bid and asked quotations are available, at the mean between the current bid and asked prices, rather than the quoted closing price). Securities that are traded over-the-counter are valued, if bid and asked quotations are available, at the mean between the current bid and asked prices. Investments in short-term debt securities having a maturity of 60 days or less are valued at amortized cost if their term to maturity from the date of purchase was less than 60 days, or by amortizing their value on the 61st day prior to maturity if their term to maturity from the date of purchase when acquired by the Fund was more than 60 days. Other assets and securities for which no quotations are readily available will be valued in good faith at fair value using methods determined by the Board of Directors. These methods include, but are not limited to, the fundamental analytical data relating to the investment; the nature and duration of restrictions in the market in which they are traded (including the time needed to dispose of the security, methods of soliciting offers and mechanics of transfer); the evaluation of the forces which influence the market in which these securities may be purchased or sold, including the economic outlook and the condition of the industry in which the issuer participates. The Fund has a Valuation Committee comprised of independent directors which oversees the valuation of portfolio securities.

The Valuation Committee of the Fund shall meet to consider any fair valuations. This consideration includes reviewing various factors set forth in the pricing procedures adopted by the Board of Directors and other factors as warranted. In considering a fair value determination, factors that may be considered, among others include; the type and structure of the security; unusual events or circumstances relating to the security's issuer; general market conditions; prior day's valuation; fundamental analytical data; size of the holding; cost of the security on the date of purchase; trading activity and prices of similar securities or financial instruments.

#### FAIR VALUE MEASUREMENTS

The Fund follows the FASB ASC Topic 820 hierarchy, under which various inputs are used in determining the value of the Fund's investments.

The basis of the hierarchy is dependent upon various "inputs" used to determine the value of the Fund's investments. These inputs are summarized in the three broad levels listed below:

Level Unadjusted quoted prices in active markets for identical assets or liabilities that the Fund has the ability

1 – to access.

Level 2 – Observable inputs other than quoted prices included in level 1 that are observable for the asset or liability, either

2 – liability, either

directly or indirectly. These inputs may include quoted prices for the identical instrument on an inactive market, prices for similar instruments, interest rates, prepayment speeds, credit risks, yield curves, default rates and similar data.

Level 3 – Unobservable inputs for the asset or liability, to the extent relevant observable inputs are not available, representing

3 – representing

the company's own assumptions about the assumptions a market participant would use in valuing the asset or liability, and would be based on the best information available.

The availability of observable inputs can vary from security to security and is affected by a wide variety of factors, including, for example,

the type of security, whether the security is new and not yet established in the marketplace, the liquidity of the markets, and other characteristics

particular to the security. To the extent that valuation is based on models or inputs that are less observable or unobservable in the market

the determination of fair value requires more judgment. Accordingly, the degree of judgment exercised in determining fair value is greatest

for instruments categorized in level 3.

The inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, for disclosure purposes, the level in the

fair value hierarchy within which the fair value measurement falls in its entirety, is determined based on the lowest level input that is significant on

the lowest level input that is significant to the fair value measurement in its entirety.

The inputs or methodology used for valuing securities are not an indication of the risk associated with investing in those securities.

The following table presents additional information about valuation methodologies and inputs used for investments that are measured at fair value and categorized within Level 3 as of October 31, 2012:

	Fair Value October 31, 2012	Valuation Methodologies	Unobservable Input(1)	Impact to Valuation from an increase in Input (2)
Capital Development Certificates	\$2,082,077	Market Comparables/ Sum of the Parts Valuation	Sum of the Parts Valuation	Increase

1 In determining certain of these inputs, management evaluates a variety of factors including economic conditions, foreign exchange rates, industry and market developments, market valuations of comparable companies and company specific developments including.

2 This column represents the directional change in the fair value of the Level 3 investments that would result from an increase to the corresponding unobservable input. A decrease to the unobservable input would have the opposite effect.
