BLUE MARTINI SOFTWARE, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

Note 1. Basis of Presentation

The condensed consolidated financial statements included herein are unaudited and reflect all adjustments (consisting only of normal recurring

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

adjustments) which are, in the opinion of management, necessary for a fair presentation of the financial position, results of operations and cash flows for the interim periods. These condensed consolidated financial statements should be read in conjunction with the consolidated financial statements and notes thereto, together with Management's Discussion and Analysis of Financial Condition and Results of Operations contained in the Blue Martini Software, Inc, ("Blue Martini Software" or the "Company") Annual Report on Form 10-K for the year ended December 31, 2000. The results of operations for the three and six months ended June 30, 2001 are not necessarily indicative of the results for the entire year ending December 31, 2001.

Note 2. Net Loss Per Common Share

Basic net loss per common share is computed using the weighted average number of outstanding shares of common stock during the period, excluding shares of restricted stock subject to repurchase. Dilutive net loss per common share is computed using the weighted average number of common shares outstanding during the period and, when dilutive, potential common shares from options and warrants to purchase common stock, and common stock subject to repurchase, using the treasury stock method, and from convertible preferred stock, using the "if-converted" method. Potential shares consist of convertible preferred stock, unvested restricted common stock, stock options and warrants.

The following potential common shares have been excluded from the calculation of diluted net loss per share for all periods presented because the effect would have been anti-dilutive (in thousands):

	Six Months Ended June 30,	
	2001	2000
Shares issuable under stock options	13,681	6,138
Shares of restricted stock subject to repurchase	4,876	10,450
Shares issuable pursuant to warrants	2,445	2,445
Shares of convertible preferred stock on an "as-if-converted" basis	--	23,297

The weighted average exercise price of stock options outstanding was \$6.81 and \$3.81 at June 30, 2001 and 2000, respectively. The weighted average purchase price of restricted stock was \$0.45 and \$0.35 at June 30, 2001 and 2000, respectively. The weighted average exercise price of warrants was \$4.94 at June 30, 2001 and 2000.

6

Note 3. Comprehensive Income (Loss)

Other comprehensive income refers to revenues, expenses, gains and losses that under generally accepted accounting principles are recorded as an element of stockholders' equity, but are excluded from net income. The components of accumulated comprehensive loss are as follows (in thousands):

Three Months Ended
June 30,

Six Mon
Jun

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

	2001	2000	2001
Net loss	\$ (19,754)	\$ (19,284)	\$ (45,459)
Unrealized gains (losses) on available-for-sale investments, net of tax	(58)	--	433
Change in accumulated translation adjustment	196	--	196
Total comprehensive loss	\$ (19,616)	\$ (19,284)	\$ (44,830)
	=====	=====	=====

Note 4. Cash and Cash Equivalents, and Short and Long-Term Investments

The Company considers all highly liquid investments with remaining maturities of three months or less at the date of purchase to be cash equivalents. Cash and cash equivalents include institutional money market funds, commercial paper and various deposit accounts. Cash equivalents are recorded at cost, which approximates fair value.

The Company's investments are classified as "available-for-sale" and are carried at fair value based on quoted market prices. These investments consist of corporate obligations that include commercial paper, corporate bonds and notes, U.S. government agency securities and asset-backed securities. Those investments with original maturities greater than three months and less than twelve months are considered short-term investments and those with original maturities greater than twelve months are considered long-term investments. Unrealized holding gains and losses, net of the related tax effect, are excluded from earnings and are reported as a separate component of other comprehensive income until realized. Realized gains and losses from the sale of available-for-sale securities are determined on the specific identification basis.

Note 5. Restructuring Charges

During the quarter ended March 31, 2001, the Company initiated actions resulting in recognition of a \$2.1 million restructuring charge. This charge included \$1.4 million for the cancellation of facility lease contracts and \$0.7 million for severance payments to employees involuntarily terminated and the write-down of certain operating assets to be disposed of. These restructuring actions resulted in the termination of approximately 60 employees.

In July 2001, the Company announced and began to implement a supplemental restructuring plan designed to reduce costs and preserve cash. The supplemental restructuring plan consisted of terminating approximately 130 full-time employees; canceling or vacating certain facility leases as a result of those employee terminations; writing off the unamortized costs of abandoned assets; and canceling contracts that were not critical to the Company's core business strategy. The total cost of these actions will result in a restructuring charge of \$4 million to \$6 million during the quarter ending September 30, 2001.

Note 6. Segment Reporting

SFAS No. 131, Disclosures about Segments of an Enterprise and Related Information, establishes standards for the manner in which public companies

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

report information about operating segments in annual and interim financial statements. It also establishes standards for related disclosures about products and services, geographic areas and major customers. The method for determining what information to report is based on the way management organizes the operating segments within the Company for making operating decisions and assessing financial performance.

The Company's chief operating decision-maker is considered to be the chief executive officer ("CEO"). The CEO reviews financial information presented for purposes of making operating decisions and assessing financial performance. The financial information is identical to the information presented in the accompanying consolidated statements of operations and the Company had no significant foreign operations through December 31, 1999. For the three months ended June 30, 2001 and 2000, revenues derived from customers outside the United States, principally in Europe, Asia and Latin America, represented 33% and 20% of consolidated revenues, respectively. For the six months ended June 30, 2001 and 2000, revenues derived from customers outside the United States represented 26% and 20% of consolidated revenues, respectively. On this basis, the Company is organized and operates in a single segment: the design, development and marketing of software solutions.

Note 7. Recent Accounting Pronouncements

In June 1998, the Financial Accounting Standards Board ("FASB") issued SFAS 133, Accounting for Derivative Instruments and Hedging Activities. The new standard establishes accounting and reporting standards for derivative instruments, including certain derivative instruments embedded in other contracts, and for hedging activities. It requires companies to record derivatives on the balance sheet as assets or liabilities, measured at fair value. Accounting for changes in the values of those derivatives depends on the intended use of the derivatives and whether they qualify for hedge accounting. SFAS 133, as amended by SFAS 137 and SFAS 138, is effective for fiscal years beginning after June 15, 2000. The Company has not entered into derivatives contracts either to hedge existing risks or for speculative purposes. Accordingly, the Company does not expect adoption of the new standard to affect its consolidated financial statements.

8

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion of the financial condition and results of operations of Blue Martini Software should be read in conjunction with the Management's Discussion and Analysis of Financial Condition and Results of Operations and the Consolidated Financial Statements and the Notes thereto included in the Company's Annual Report on Form 10-K for the year ended December 31, 2000. This quarterly report on Form 10-Q contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended ("Securities Act"), and Section 21E of the Securities Exchange Act of 1934 ("Exchange Act"), as amended, including statements using terminology such as "can," "may," "believe," "designated to," "will," "expect," "plan," "anticipate," "estimate," "potential," or "continue," or the negative thereof or other comparable terminology regarding beliefs, plans, expectations or intentions regarding the future. Forward-looking statements involve risks and uncertainties and actual results could differ materially from those discussed in the forward-looking statements. All forward-looking statements and risk factors included in this document are made as of the date hereof, based on information available to the Company as of the date thereof, and the Company assumes no obligation to update any forward-looking statement or risk factors.

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

Overview

Blue Martini Software competes in the external Customer Relationship Management (eCRM) market and provides enterprise software applications and services that enable companies to understand, target and interact with their customers and business partners across multiple touch points, including websites, mobile wireless devices, cellular phones, e-mail and online marketplaces. Our products' analytic capabilities are designed to allow companies to develop insights regarding customer behavior, and then use these insights to provide customers with relevant products, content and offerings.

Blue Martini Software's comprehensive packaged applications are designed to offer extensive capabilities out-of-the-box, enabling companies to implement eCRM solutions quickly and accelerate their time to benefit. Our application suite is designed to be business-user friendly, allowing non-technical employees to manage the day-to-day online content, campaigns and programs. In addition, our application suite is extensible, thereby allowing developers to create differentiating capabilities.

Blue Martini Software's target customers include senior sales, marketing, information technology and service executives in larger, established companies. We primarily target our products to manufacturing, retail, financial services and consumer goods industries. As of June 30, 2001, we had licensed our application suite to more than 100 customers worldwide.

We recognize revenues in accordance with Statement of Position ("SOP") 97-2, Software Revenue Recognition, as modified by SOP 98-9. SOP 97-2, as modified, generally requires revenue earned on software arrangements involving multiple elements such as software products, upgrades, enhancements, post contract customer support ("PCS"), installation, training, etc. to be allocated to each element based on the relative fair values of the elements. The fair value of an element must be based on evidence that is specific to the vendor. If evidence of fair value does not exist for all elements of a license agreement and PCS is the only undelivered element, then all revenues for the license arrangement is recognized ratably over the term of the agreement. If evidence of fair value of all undelivered elements exists but evidence does not exist for one or more delivered elements, then revenue is recognized using the residual method. Under the residual method, the fair value of the undelivered elements is deferred, and the remaining portion of the arrangement fee is recognized as revenue.

9

Our revenues are derived from the licensing of our application suite and the sale of related services. The license agreement for our application suite typically provides for an initial fee to use the software in perpetuity. License revenues are recognized when persuasive evidence of an agreement exists, delivery of the product has occurred, the fee is fixed or determinable and collectibility is probable, assuming no significant future obligations or customer acceptance rights exist. If an acceptance period is contractually provided, revenues are recognized upon the earlier of customer acceptance or the expiration of that period. In instances where delivery is electronic and all other criteria for revenue recognition have been achieved, the product is considered to have been delivered when the customer either takes possession by downloading the software or the access code to download the software has been provided to the customer. Payments received in advance of revenue recognition are recorded as deferred revenues.

Services revenues are principally derived from consulting services, technical support and training. Our maintenance agreements entitle customers to

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

receive software updates, maintenance releases and technical support. Maintenance is typically paid in advance and the related revenues are deferred and recognized ratably over the term of the maintenance contract, which is typically one year. A majority of our customers use systems integrators to implement our product. Consulting services and training are typically sold on a time-and-materials basis and revenues from these services are recognized when the services are performed and collectibility is deemed probable.

We market our application suite through a direct sales force. We also engage in alliances with systems integrators and technology vendors to assist us in marketing and selling our application suite and related services. While our revenues to date have been derived principally from customers in the United States, international revenues accounted for 33% and 26% of our revenues for the three and six months ended June 30, 2001, respectively. For the three and six months ended June 30, 2000, international revenues accounted for 20% of our total revenues. We believe international revenues will represent a significant portion of our total revenues in the future but may fluctuate as a percentage of total revenues in the near term as we build out our international presence. Although we have a limited operating history, we believe that our quarterly operating results may experience seasonal fluctuations. For instance, quarterly results may fluctuate based on our customers' fiscal year, budgeting cycles, sales incentive plans, slow summer purchasing patterns and general economic conditions in markets where we conduct business.

To date, we have derived a significant portion of our revenues from a small number of customers. For the quarter ended June 30, 2001, sales to one customer individually represented 20% of our total revenues while for the same period of 2000, one customer accounted for 13% while a second customer accounted 11% of our total revenues. While we do not anticipate that any one customer will represent more than 10% of total revenues in 2001, we do expect that a limited number of customers will continue to account for a substantial portion of our license revenues in a given quarter. As a result, if we lose a major customer or if anticipated significant license contracts are delayed or cancelled, our revenues and operating results in a particular quarterly period would be adversely affected. In addition, customers that have accounted for significant revenues in the past may not generate revenues in any future period. If we fail to obtain a significant number of new customers or additional orders from existing customers in any period, our business and operating results would be harmed.

We believe our success requires expanding our customer base, growing our relationships with consulting and system integrator partners and continuing to enhance our application. There can be no assurance that we will be successful in accomplishing any of these goals. We currently expect to continue to incur net losses for the next several quarters. Our operating expenses are based in part on our expectations of future revenues and are relatively fixed in the short term. As such, a delay in completion of new customer license contracts or the recognition of revenues from one or more license contracts could cause significant variations in our operating results from quarter to quarter and could result in net losses in a given quarter being greater than expected.

Results of Operations

The following table presents selected financial data for the periods indicated as a percentage of total revenues:

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

	Three Months Ended June 30,		Six Months Ended June 30,	
	2001	2000	2001	2000
Revenues:				
License	39 %	56 %	39 %	56 %
Service	61	44	61	44

Research and development	32	33	34	33
General and administrative	32	36	33	36
Restructuring charges	-	-	6	-
Total operating expenses	156	154	159	154
Loss from operations	(137)	(129)	(136)	(129)
Interest and other, net	10	1	10	1
Net loss	(127) %	(128) %	(126) %	(128) %

Revenues

License. License revenues decreased from \$8.4 million for the three months ended June 30, 2000 to \$6.0 million for the three months ended June 30, 2001. For the six months ended June 30, 2001, license revenues decreased to \$14.1 million from \$14.5 million for the comparable period in 2000. The decreases in license revenues for the three and six month periods ended June 30, 2001 as compared to the comparable periods in 2000 were due to a decrease in software licenses to new customers. We believe that current economic conditions have resulted in decreased demand in our target markets, and in particular, we have experienced an increase in the average length of our sales cycles as compared to prior years. The future direction of the overall domestic and global economies will have a significant impact on our overall performance. To the extent that the current downturn continues or increases in severity, we believe demand for our products and services, and therefore future revenues, will be reduced as compared to prior periods.

Service. Service revenues increased from \$6.6 million for the three months ended June 30, 2000 to \$9.6 million for the three months ended June 30, 2001. For the six months ended June 30, 2001, service revenues increased to \$22.1 million from \$11.2 million for the comparable period in 2000. The increases in service revenues for the three and six months ended June 30, 2001 as compared to the same periods in 2000 were due to an increase in the number of consulting service engagements and customer maintenance agreements. We expect that our service revenues will fluctuate as a percentage of total revenues. Service revenues are anticipated to decrease as a percentage of total revenues over the

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

long term as systems integrators and other professional services organizations provide the consulting services, technical support and training that we currently provide. A reduction in the number of application suite licenses to new or existing customer will impact services and will result in lower revenues from our customer training, consulting services and technical support organizations. In the near term, we expect service revenues to decrease based on the number of license contracts signed in the quarter ended June 30, 2001.

11

Cost of Revenues

License. Cost of license revenues consists of royalties payable to third parties and amortization of purchased intangibles for software that is either embedded in or bundled with our products. Cost of license revenues increased from \$751,000 for the three months ended June 30, 2000 to \$1.2 million for the three months ended June 30, 2001. These amounts represented 9% of license revenues in 2000 and 20% in 2001. For the six months ended June 30, 2001, cost of license revenues increased to \$2.4 million from \$1.3 million for the comparable period in 2000. These amounts represented 17% and 9% of license revenues for these periods. The increases for the three and six months ended June 30, 2001 as compared to the same periods in 2000 were principally the result of amortization of certain intangible assets acquired in December 2000. We expect our license revenues will impact cost of license revenues in future periods. To the extent license revenues increase, we expect cost of license revenues to increase in absolute dollars but to decline slightly as a percentage of license revenues as a result of royalty agreements that typically contain declining royalty rates.

Service. Cost of service revenues consists primarily of salaries and other personnel-related expenses, amortization of deferred stock compensation and depreciation of equipment used to provide consulting services, technical support and training. Cost of service revenues increased from \$10.5 million for the three months ended June 30, 2000 to \$11.4 million for the three months ended June 30, 2001. These amounts represented 159% of service revenues in 2000 and 119% in 2001. For the six months ended June 30, 2001, cost of service revenues increased to \$25.3 million from \$16.7 million for the comparable period in 2000. These amounts represented 115% of service revenues in 2001 and 149% in 2000. The increase in absolute dollars for the three and six month periods ended June 30, 2001 as compared to the same periods in 2000 resulted from the expansion of our consulting services, technical support and training organizations to support the growth in new licenses, partially offset by a decrease in the amortization of deferred stock compensation. Because our cost of service revenues are relatively fixed, our cost of services, when expressed as a percentage of related service revenues, may fluctuate in the near term, based primarily on our related service revenues.

Operating Expenses

Sales and Marketing. Sales and marketing expenses consist primarily of costs of our direct sales and marketing personnel, amortization of deferred stock compensation, as well as costs of marketing programs including trade shows, advertisements, promotional activities and media events. Sales and marketing expenses increased from \$12.8 million for the three months ended June 30, 2000 to \$14.3 million for the three months ended June 30, 2001. For the six months ended June 30, 2001, marketing and sales expenses increased to \$31.2 million from \$21.4 million for the comparable period in 2000. The increases for the three and six month periods ended June 30, 2001 as compared to the same periods in 2000 were primarily attributable to an increase in sales and marketing personnel expenses, increased amortization of stock warrants and increased spending for marketing and advertising programs, partially offset by a

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

decrease in sales commissions and amortization of deferred stock compensation.

Research and Development. Research and development expenses consist primarily of salaries and related expenses for engineering personnel, amortization of deferred stock compensation, costs of contractors and depreciation of equipment used in the development of our software product. Research and development expenses increased from \$4.9 million for the three months ended June 30, 2000 to \$5.0 million for the three months ended June 30, 2001. For the six months ended June 30, 2001, research and development expenses increased to \$12.4 million from \$9.3 million for the comparable period in 2000. The growth in expenses for the three and six months ended June 30, 2001 as compared to the comparable periods in 2000 was primarily due to an increase in personnel-related expenses resulting from the addition of engineering personnel to support the development and enhancement of our products and an increase in professional fees related to product development activities, partially offset by a decrease in the amortization of deferred stock compensation. To date, we have expensed all internal software development costs as incurred.

12

General and Administrative. General and administrative expenses include costs associated with our finance, human resources, legal, information systems and other administrative functions and consist principally of salaries and related expenses, professional fees, amortization of deferred stock compensation, provisions for doubtful accounts and equipment depreciation. General and administrative expenses decreased from \$5.4 million for the three months ended June 30, 2000 to \$5.0 million for the three months ended June 30, 2001. The decrease in general and administrative expenses for the three months ended June 30, 2001 as compared to the comparable period in 2000 was attributable to decreased amortization of deferred stock compensation and a decrease in the provision for doubtful accounts, partially offset by an increases in expenses for administrative personnel and professional fees. For the six months ended June 30, 2001, general and administrative expenses increased to \$12.0 million from \$7.9 million for the comparable period in 2000. The growth in expenses for the six months ended June 30, 2001 as compared to the comparable period in 2000 was attributable to increased amortization of deferred stock compensation, personnel expenses and professional fees.

Restructuring charges. During the quarter ended March 31, 2001, the Company initiated actions resulting in recognition of a \$2.1 million restructuring charge. This charge included \$1.4 million for the cancellation of facility lease contracts and \$0.7 million for severance payments to employees involuntarily terminated and the write-down of certain operating assets to be disposed of. These restructuring actions resulted in the termination of approximately 60 employees.

In July 2001, the Company announced and began to implement a supplemental restructuring plan designed to reduce costs and preserve cash. The supplemental restructuring plan consisted of terminating approximately 130 full-time employees; canceling or vacating certain facility leases as a result of those employee terminations; writing off the unamortized costs of abandoned assets; and canceling contracts that were not critical to the Company's core business strategy. The total cost of these actions will result in a restructuring charge of \$4 million to \$6 million during the quarter ending September 30, 2001.

Stock Compensation. Deferred stock compensation represents the difference between the exercise price of stock option grants to employees and the deemed fair value of our common stock at the time of those grants. We recorded deferred stock compensation of \$2.2 million for the period from inception to December 31, 1998, \$10.4 million in 1999 and \$50.6 million in 2000. We are amortizing

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

deferred stock compensation to expense over the period during which the stock options vest, generally four years, using an accelerated method allowed by generally accepted accounting principles. Such amortization amounted to \$2.6 million and \$7.6 for the three months ended June 30, 2001 and June 30, 2000, respectively, and \$9.6 million and \$11.9 million for the six months ended June 30, 2001 and 2000, respectively. Amortization expense in the quarter ended June 30, 2001 was reduced by \$2.6 million to reflect adjustments associated with unvested options forfeited by terminated employees.

During the six months ended June 30, 2001 and the comparable period in 2000, we granted and immediately vested, stock options to non-employees. In connection with these grants, we recorded non-cash compensation expense of \$56,000 and \$1.4 million for the six months ended June 30, 2001 and the comparable period in 2000. This reflects the fair value of these stock options based on the Black-Scholes option-pricing model.

13

The amortization of deferred stock compensation, combined with the expense associated with stock options granted to non-employees, relates to the following items in the accompanying condensed consolidated statements of operations (in thousands):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2001	2000	2001	2000
Cost of revenues.....	\$ 301	\$ 1,991	\$ 1,913	\$ 1,913
Sales and marketing.....	261	1,912	1,630	1,630
Research and development.....	67	1,206	1,255	1,255
General and administrative.....	1,981	2,472	4,850	4,850
	-----	-----	-----	-----
	\$ 2,610	\$ 7,581	\$ 9,648	\$ 9,648
	=====	=====	=====	=====

Amortization of deferred stock compensation is estimated to total \$16.6 million for 2001, \$7.7 million for 2002, \$2.7 million for 2003 and \$.2 million for 2004. Amortization of deferred stock compensation will be reduced in future periods to the extent options are terminated prior to being vesting.

Interest and Other, Net

Interest income and other, net consists of interest income from cash, cash equivalents and available-for-sale short and long-term investments partially offset by interest expense associated with capital leases, and foreign currency transaction gains and losses. Interest income and other, net increased from \$79,000 for the three months ended June 30, 2000 to \$1.5 million for the three months June 30, 2001. For the six months ended June 30, 2001, interest income and other, net increased to \$3.8 million from \$139,000 in the comparable period in 2000. The increase was due primarily to higher balances of cash, cash equivalents and short and long-term investments as a result of our initial public offering in July 2000. Foreign currency transaction losses for the three and six months ended June, 2001 were \$197,000 and \$233,000, respectively. For the three and six months ended June 30, 2000, foreign currency transaction gains

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

and losses were immaterial.

Income Taxes

From inception to June 30, 2001, we incurred net losses for federal and state tax purposes and have not recognized any tax provision or benefit. Because of our limited operating history, our losses incurred to date and the difficulty in accurately forecasting our future results, management does not believe that the realization of the related deferred income tax asset meets the criteria required by generally accepted accounting principles. Therefore, we have recorded a 100% valuation allowance against the deferred income tax assets.

Liquidity and Capital Resources

As of June 30, 2001, we had cash, cash equivalents and short and long-term investments of approximately \$115.9 million.

For the six months ended June 30, 2001, net cash used in operating activities was \$32.3 million compared to \$1.2 million in the comparable period in 2000. Net cash used in operating activities for the first six months of 2001 and for the comparable period in 2000 was primarily the result of net losses of \$45.5 million and \$30.9 million, respectively, which included restructuring charges of \$2.1 million in the first six months of 2001 and amortization of deferred stock compensation, warrants and intangible assets of \$11.4 million for the first six months of 2001 and \$14.1 million for the comparable period in 2000.

14

Net cash of \$18.7 million was provided by investing activities for the six months ended June 30, 2001 resulting from maturities of available-for-sale investments, partially offset by cash used to purchase intangible assets and computer hardware and software, office furniture and equipment. For the six months ended June 30, 2000, net cash used for investing activities was \$2.2 million and principally related to the purchase of short and long-term investments, and to purchase computer hardware and software, office furniture and equipment.

Net cash provided by financing activities was \$2.9 million for the six months ended June 30, 2001 and \$2.7 million for the comparable period in 2000. The cash provided by financing activities for the six months ended June 30, 2001 was principally related to proceeds from shares issued under our stock option and employee stock purchase plans. The cash provided by financing activities for the first six months of 2000 was principally related to the issuance of common stock under our stock option plans.

Our liquidity, capital resources and results of operations in any period could be impacted by the exercise of outstanding stock options and warrants. For example, at June 30, 2001, we had outstanding options to purchase 13.7 million shares of our common stock at a weighted average exercise price of \$6.81 per share, and had approximately 13 million additional shares reserved for future grant under our stock option plans. In addition, we have issued warrants which are now exercisable to purchase 2.4 million shares of common stock at an weighted average exercise price of \$4.94 per share. Accordingly, our liquidity and capital resources may be impacted in future periods by cash proceeds upon exercise of these securities and from securities reserved for future issuance under our stock option plans. In addition, our per share results of operations could also be impacted by the increased number of outstanding shares. However, we cannot predict the timing or amount of proceeds from the exercise of these securities, if they are exercised at all.

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

We expect that for the foreseeable future, our operating expenses and planned capital expenditures will constitute a significant use of our cash balances. In addition, we may use cash to fund acquisitions or invest in other businesses, technologies or product lines. We currently anticipate that our existing cash and investments will be sufficient to meet our presently anticipated working capital, capital expenditure and our operating requirements for the next several quarters. However, we may require additional funds either within this time period or at some future date. We may seek to raise these additional funds through public or private debt or equity financing to meet these additional working capital requirements. There can be no assurance that this additional financing will be available, or if available, will be on reasonable terms and not dilutive to our stockholders. If adequate funds are not available on acceptable terms, our business and operating results could be adversely affected. If we were to seek additional financing today, we do not believe it would be available on reasonable terms.

Factors That May Impact Future Operating Results

Our short operating history makes it difficult to evaluate our business and prospects.

You must consider our business and prospects given the risks, expenses and challenges we might encounter because we are at an early stage of development in a new and rapidly evolving market. We were founded in June 1998 and licensed our first software product in late March 1999, and our sales and service organizations are new. Due to our short operating history, our future financial performance is not predictable and may not meet analyst projections for revenues or other operating results, thereby disappointing investors and resulting in a significant decline in our stock price.

15

We have incurred losses during our operating history and expect losses to continue for the foreseeable future and we may not achieve or maintain profitability.

We have incurred net losses in each quarterly period since our inception. As of June 30, 2001, we had an accumulated deficit of \$120 million. We expect to continue to incur losses on both a quarterly and annual basis for the foreseeable future. Moreover, we expect to continue to incur significant sales and marketing and research and development expenses. Further, we will incur substantial stock compensation expense in future periods, which represents non-cash charges incurred due to the issuance of stock options prior to the closing of our initial public offering on July 28, 2000. Therefore, we will need to significantly increase our revenues to achieve and maintain profitability. We may not be able to generate sufficient revenues to achieve profitability.

The current economic downturn has significantly impacted demand for our products and services and may adversely impact future revenues.

The majority of our revenues has been and is expected to continue to be derived from customers in the United States. Recent economic indicators, including growth in gross domestic product, reflect a decline in economic activity in the United States. Some reports have indicated an even more significant decline in spending by corporations in the area of information technology, which includes the eCRM market. Because current conditions in the domestic and global economies are extremely uncertain, it is difficult to estimate the level of growth for the economy as a whole. It is even more difficult to correlate the impact of macro-economic conditions on our sales

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

activities. We believe that current economic conditions have caused decreased demand in our target markets, and in particular, have increased the average length of our sales cycles.

Because our budgeting and forecasting are dependent upon estimates of revenue growth in the markets we target, the prevailing economic uncertainty renders estimates of anticipated license contract signings and future revenues difficult to make. The future performance of the overall domestic and global economies will have a significant impact on our overall performance. To the extent that the current downturn continues or increases in severity, or results in a similar downturn worldwide, we believe demand for our products and services, and therefore future revenues, could be further reduced.

Our product has a long and variable sales cycle, which makes it difficult to predict our future results and may cause our operating results to vary significantly.

Our revenues and results of operations are difficult to predict and may fluctuate substantially from quarter to quarter. For example, certain indicators that we relied upon in developing our license revenue forecasts, such as our historical pattern of transaction timing and anticipated sales cycles, did not prove reliable during the six-month period ended June 30, 2001. Despite engaging with a number of customer prospects during the quarter ended June 30, 2001, we continued to see the extended sales cycles and postponed customer IT spending that was also prevalent in the first quarter of 2001. To the extent that there continues to be economic uncertainty or perceived uncertainty in global economies, we believe our operating results could be materially and adversely affected.

The period between initial contact with a prospective customer and the licensing of our application suite varies and can range from three to twelve months. The timing of revenues from the licensing of our application suite is difficult to forecast for a variety of reasons, including the following factors:

- . A significant portion of our license agreements are completed within the last few weeks of each quarter. Recently, this pattern has become more pronounced, and as a result, any revenue shortfalls for a quarterly period may not be known until late in the quarter;
- . Our sales cycle is long and complex as customers consider a number of factors before committing to purchase our application suite. Factors considered by customers when evaluating our application suite include product benefits, cost and time of implementation, ability to operate with existing and future computer systems and the ability to accommodate increased transaction volume and product reliability. As a result, we spend significant time and resources informing prospective customers about our application suite, which may not result in a completed transaction and impact our operating margins;
- . Because the licensing of our application suite is often an enterprise-wide decision by our customers that involves many factors, our ability to license our product may be impacted by changes in the strategic importance of eCRM projects to our customers, budgetary constraints or changes in customer management;
- . The contract value of individual license agreements can vary significantly, therefore, delays in the signing of one or more large license agreements or the loss of a significant customer order could have a material impact on our revenues and results of operations

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

because a substantial portion of our quarterly revenues are derived from a small number of customers;

- . The existence or even the anticipation by potential customers of economic downturns in the markets in which we operate has in the quarter ended June 30, 2001 and may continue in future periods to decrease the demand for our applications, cause pricing pressures for our products and substantially reduce our sales activity. As a result of these macroeconomic conditions, customers have during the quarter ended June 30, 2001 and may continue in future periods to unexpectedly postpone or cancel planned eCRM projects, including the evaluation and purchase of new applications or upgrades to existing applications;
- . Customer evaluation, purchasing and budgeting processes vary significantly from company to company, and a customer's internal approval and expenditure authorization process can be difficult and time consuming. Delays on approvals, even after selection of a vendor, could impact the timing and amount of revenues recognized in a quarterly period;
- . Changes in our sales incentive plans may have an unpredictable impact on our sales cycle and contracting activities; and
- . The number, timing and significance of enhancements to our application suite and the introduction of new software by our competitors and us may affect customer-purchasing decisions.

Several factors may require us to defer recognition of license revenue for a significant period of time after entering into a license agreement, including instances where we are required to deliver either unspecified additional products or specified upgrades for which we do not have vendor-specific-objective-evidence of fair value. While we have a standard software license agreement that provides for revenue recognition provided that delivery has taken place, collectibility from the customer is probable and assuming no significant future obligations or customer acceptance rights exist, customer negotiations and revisions to these terms could impact our ability to recognize revenues at the time of delivery. Also, the additional time needed to negotiate mutually acceptable terms that culminate in an agreement to license our application suite could also extend the sale cycle.

Slowdowns or variances from internal expectations in our quarterly license contracting activities may impact our service offerings and may result in lower revenues from our customer training, consulting services and technical support organizations. Our ability to maintain or increase service revenues is highly dependent on our ability to increase the number of license agreements we enter into with customers.

Because our operating expenses are based on our expectations for future revenues and are relatively fixed in the short term, any revenue shortfall below expectations could have an immediate and significant adverse effect on our consolidated results of operations and financial condition.

Recent cost-reduction efforts may not result in anticipated savings and may adversely impact our productivity and service level .

In March and July of 2001, we announced reductions in our workforce of approximately 13% and 25%, respectively, and instituted various cost control measures. These cost control efforts involve various aspects of our business operations. The failure to achieve these cost savings could have a material

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

adverse effect or our financial condition. Moreover, even if we are successful with these efforts and generate the anticipated cost savings, there can be no assurance that these actions will not adversely impact our productivity and adversely impact our business and results of operations.

Because a small number of customers have accounted, and are likely to continue to account, for a substantial portion of our revenues, our revenues could decline due to the loss or delay of a single customer order.

A relatively small number of customers account for a significant portion of our total quarterly revenues. The loss or delay of individual orders could have a significant impact on revenues and operating results. One customer accounted for 20% of our revenues for the three-month period ended June 30, 2001, while in the same period of 2000, two customers accounted for 24% of our total revenues. We expect that revenues from a limited number of new customers will continue to account for a large percentage of total revenues in future periods. Our ability to attract new customers will depend on a variety of factors, including the performance, quality, breadth, depth and price of our current and future products. Our failure to add new customers that make significant licenses of our application suite and services would reduce our future revenues.

We record as deferred revenues payments from customers that do not meet our revenue recognition policy requirements. Since some of our quarterly revenues are recognized from deferred revenues, our quarterly results will depend primarily upon entering into new agreements to generate revenues for that quarter. New agreements may not result in revenues in the quarter in which the agreement was signed and commissions and royalties may become payable, and we may not be able to predict accurately when revenues from these agreements will be recognized. Similarly, declines in deferred revenues from prior quarters may disappoint investors and could result in a significant decline in our stock price. We expect the level of our deferred revenues to fluctuate in future periods.

All of our revenues to date have been derived from the licensing of our application suite and the sale of related services, and if we fail to successfully upgrade or enhance our application suite and introduce new products, our revenues would decline.

All of our revenues to date have been derived from the licensing of our application suite and the sale of related services. For the six months ended June 30, 2001, 39% of our total revenues were derived from the licensing of our application suite as compared to 56% in the same period of 2000. Since introducing our products in March 1999, license revenues have accounted for 53% of our total revenues. The decrease in the percentage of revenues derived from license sales for the six months ended June 30, 2001 resulted primarily from a decrease in the license sales when compared to the same period ended June 30, 2000 and the increases in service revenues for the same period. Our future revenues will depend, in significant part, on our successful development and license of new and enhanced versions of our application suite and of other new products. If we are not able to successfully develop new products or these new products do not achieve market acceptance, our revenues would be reduced.

We are the target of several securities class action complaints and are at risk of securities class action litigation, which could result in substantial costs and divert management attention and resources.

During July 2001, several securities class action complaints were filed against the underwriters of the Company's initial public offering, the Company, its directors and certain of its officers in the United States District Court

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

for the Southern District of New York. The complaint alleges that the underwriters entered into certain arrangements with investors in connection with our initial public offering, and that these alleged arrangements should have been and were not disclosed in the registration statement and prospectus. The complaints seek unspecified monetary damages and attorneys fees and other costs. We expect that these cases will be consolidated into a single case. The Company believes that it has meritorious defenses against the lawsuits and intends to defend itself vigorously.

In addition, in the past, other types of securities class action litigation have been brought against companies following a decline in the market price of their securities. This risk is especially acute for us because technology companies have experienced greater than average stock price volatility in recent years, particularly since mid-2000 and, as a result, technology companies have been subject to a greater number of securities class action claims than companies in other industries. We may in the future be the target of additional securities class action litigation. Securities litigation could result in substantial costs and divert management's attention and resources, which could harm our business.

Our failure to develop and maintain strong relationships with consulting and system integrator firms (CSIs) would harm our ability to market our application suite, which could reduce future revenues and increase our expenses.

An increasing portion of our sales are influenced by the recommendation of our application suite by systems integrators, consulting firms and other third parties that help deploy our application suite for our customers. Losing the support of these third parties may limit our ability to penetrate our existing or potential markets. These third parties are under no obligation to recommend or support our application suite and could recommend or give higher priority to the products and services of other companies or to their own products. Our inability to gain the support of CSIs or a shift by these companies toward favoring competing products could negatively affect our software license and service revenues.

Some CSIs also engage in joint marketing and sales efforts with us. If our relationships with CSIs fail, we will have to devote substantially more resources to the sales and marketing of our application suite. In many cases, these parties have extensive relationships with our existing and potential customers and influence the decisions of these customers. A number of our competitors have longer and more established relationships with these CSIs than we do, and as a result these CSIs may be more likely to recommend competitors' products and services and increase our expenses.

Our failure to develop and maintain strong relationships with systems integrators would harm our ability to implement our application suite.

Systems integrators assist our customers with the installation and deployment of our application suite, in addition to those products of our competitors, and perform custom integration of computer systems and software. If we are unable to develop and maintain relationships with systems integrators, we would be required to hire additional personnel to install and maintain our application suite, which would result in delays in our ability to recognize revenue and higher expenses.

If our application suite does not successfully function for customers with large numbers of transactions, customers or product offerings, we may lose sales and suffer decreased revenues.

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

Our application suite must be able to accommodate a large number of transactions, customers and product offerings. Large-scale usage presents significant technical challenges that are difficult or impossible to predict. To date, our application suite has been deployed by only a limited number of customers and, therefore, we cannot assure you that our application suite is able to meet our customers' demands for large-scale usage. If our customers experience difficulty with our application suite during periods of high traffic or usage, it could damage our reputation and reduce our revenues.

If our product does not operate with a wide variety of hardware, software and operating systems used by our customers, our revenues would be harmed.

We currently serve a customer base that uses a wide variety of constantly changing hardware, software applications and operating systems. Our application suite will only gain broad market acceptance if it can support a wide variety of hardware, software applications and systems. If our product is unable to support a variety of these products, our revenues would be harmed. Our business depends on the following factors, among others:

- . our ability to integrate our application suite with multiple hardware systems and existing software systems and to modify our product as new versions of packaged applications are introduced;
- . our ability to anticipate and support new standards, especially Internet-based standards; and
- . our ability to integrate additional software modules under development with our existing application suite.

Defects in our application suite could diminish demand for our application suite and result in loss of revenues, decreased market acceptance, injury to our reputation and product liability claims.

We have in the past discovered software errors and performance problems with our application suite after commencement of commercial shipment, and as a result, have experienced injury to our reputation, increased expenses, delays in the shipment of our application suite and our customers have experienced difficulty in deploying and operating our application suite.

Errors in our application suite may be caused by defects in third-party software incorporated into our application suite. If so, we may not be able to fix these defects without the cooperation of these software providers. Since these defects may not be as significant to our software providers as they are to us, we may not receive the rapid cooperation that we may require. We may not have the contractual right to access the source code of third-party software and, even if we access the source code, we may not be able to fix the defect.

Since our customers use our application suite for critical business applications such as e-commerce, any errors, defects or other performance problems of our application suite could result in damage to the businesses of our customers. Consequently, these customers could delay or withhold payment to us for our software and services, which could result in an increase in our provision for doubtful accounts or an increase in collection cycles for accounts receivable, both of which could disappoint investors and result in a significant decline in our stock price. In addition, these customers could seek significant compensation from us for their losses. Even if unsuccessful, a product liability claim brought against us would likely be time consuming and costly and harm our reputation, and thus our ability to license to new customers. Even if a suit is not brought, correcting errors in our application suite could increase our expenses.

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

If we fail to introduce new versions and releases of our application suite in a timely manner, customers may license competing products and our revenues may decline.

We may fail to introduce or deliver new products on a timely basis, if at all. In the past, we have experienced delays in the commencement of commercial shipments of enhancements to our application suite. To date, these delays have not had a material impact on our revenues. If we are unable to ship or implement new products or enhancements to our application suite when planned or at all, or fail to achieve timely market acceptance of these new products or enhancements, we may suffer lost sales and could fail to increase our revenues. Our future operating results will depend on demand for our application suite, including new and enhanced releases that are subsequently introduced.

We may not successfully enter international markets or generate significant revenues abroad, which could result in slower revenue growth and harm our business.

To date, we have generated limited revenues from sales outside the United States. We have established sales offices in the United Kingdom, Canada, Germany, Sweden, France, Netherlands, Italy, Hong Kong, Singapore, Japan and Australia. If we fail to license our application suite in international markets, we could experience slower revenue growth and our business could be harmed. We anticipate devoting significant resources and management attention to expanding international opportunities. Expanding internationally subjects us to a number of risks, including:

- . greater difficulty in staffing and managing foreign operations;
- . expenses associated with foreign operations and compliance with applicable laws;
- . changes in a specific country's or region's political or economic conditions;
- . expenses associated with localizing our product for foreign countries;
- . differing intellectual property rights;
- . protectionist laws and business practices that favor local competitors;
- . longer sales cycles and collection periods or seasonal reductions in business activity;
- . multiple, conflicting and changing governmental laws and regulations; and
- . foreign currency restrictions and exchange rate fluctuations.

Because competition for qualified personnel is intense, we may not be able to retain or recruit personnel, which could impact the development and license of our application suite.

If we are unable to hire or retain qualified personnel, or if newly hired personnel fail to develop the necessary skills or to reach expected levels of productivity, our ability to develop and market our application suite will be weakened. Our success also depends on the continued contributions of our key management, engineering, sales and marketing and professional services personnel. In particular, Monte Zweben, our Chairman, President and Chief

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

Executive Officer, would be difficult to replace.

Our ability to increase our sales will depend on our ability to recruit, train and retain top quality sales people who are able to target prospective customers' senior management, and who can generate and service large accounts. There is a shortage of qualified sales personnel in our industry and competition for them is intense.

21

Failure of our prospective technology customers to receive necessary funding could harm our business.

Our customers include rapidly growing technology companies. Most privately and publicly held technology companies require outside cash sources to continue operations. Recently, funding has been less available for technology companies as a result of the stock market decline and public and private investor concern regarding technology-based businesses. These factors have reduced demand for our application suite from technology-based customers and reduced demand for additional services from current technology-based customers. Failure by existing customers in this industry to receive or generate adequate funding has and may continue to result in provisions for uncollectible accounts receivable from such companies.

Increasing government regulation of the Internet, imposition of sales and other taxes on products sold by our customers over the Internet and privacy concerns relating to the Internet could reduce the license of our application suite and harm our business.

Federal, state or foreign agencies may adopt laws or regulations affecting the use of the Internet as a commercial medium. We expect that laws and regulations relating to user privacy, pricing, content and quality of products and services could indirectly affect our business.

Current federal legislation limits the imposition of state and local taxes on Internet-related sales at this time. Congress may choose not to renew this legislation in 2002, in which case state and local governments would be free to impose taxes on electronically purchased goods. The imposition of new sales or other taxes could limit the growth of Internet commerce in general and, as a result, the demand for our application suite and services.

Businesses use our application suite to capture information regarding their customers when those customers contact them on-line with customer service inquiries. Privacy concerns may cause visitors to withhold personal data, which would limit the effectiveness of our application suite. More importantly, even the perception of privacy concerns, whether or not valid, may indirectly inhibit market acceptance of our application suite.

If we are unable to meet rapid changes in technology, our existing application suite could become obsolete.

The market for our application suite is marked by rapid technological change, frequent new product introductions, Internet-related technology enhancements, uncertain product life cycles, changes in client demands and evolving industry standards. We cannot be certain that we will successfully develop and market new products, new product enhancements or new products compliant with present or emerging Internet technology standards. New products based on new technologies or new industry standards can render existing products obsolete and unmarketable. To succeed, we will need to enhance our current application suite and develop new products on a timely basis to keep pace with developments related to Internet technology and to satisfy the increasingly

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

sophisticated requirements of our clients. Enterprise application software technology is complex and new products and product enhancements can require long development and testing periods. Any delays in developing and releasing enhanced or new products could harm our business.

We have no issued patents. If we are unable to protect our intellectual property or become subject to intellectual property infringement claims, we may lose a valuable asset or incur costly and time-consuming litigation.

Our success depends in part on the development and protection of the proprietary aspects of our technology as well as our ability to operate without infringing on the proprietary rights of others. To protect our proprietary technology, we rely primarily on a combination of trade secret, copyright, trademark and patent laws, as well as confidentiality procedures and contractual restrictions.

22

We have no issued patents. We presently have several United States patent applications pending. It is possible that some or all of the patents that we have applied for will not be issued, and even if issued, that some or all may be successfully defended. It is also possible that we may not develop proprietary products or technologies that are patentable, that any patent issued to us may not provide us with any competitive advantages or that the patents of others will harm our ability to do business.

Despite our efforts to protect our proprietary rights and technology, unauthorized parties may attempt to copy aspects of our products or obtain the source code to our software or use other information that we regard as proprietary or could develop software competitive to ours. Our means of protecting our proprietary rights may not be adequate, and our competitors may independently develop similar technology or duplicate our product. Litigation may be necessary in the future to enforce our intellectual property rights, to protect our trade secrets, to determine the validity and scope of the proprietary rights of others or to defend against claims of infringement or invalidity. Any such resulting litigation could result in substantial costs and diversion of resources that could have a material adverse effect on our business, operating results and financial condition.

It is possible that in the future, a third party may bring suit claiming that we or our current or future products infringe their patents, trade secrets or copyrights. Any claims, with or without merit, could be costly and time-consuming to defend, divert our management's attention or cause product delays. We have no patents that we could use defensively against any company bringing such a claim. If our product was found to infringe a third party's proprietary rights, we could be required to enter into royalty or licensing agreements to be able to sell our product. Royalty and licensing agreements, if required, may not be available on terms acceptable to us, if at all, which could harm our business.

Rising energy costs and power system shortages in California may result in increased operating expenses and reduced net income, and harm our operations due to power loss.

California is currently experiencing an energy crisis and has recently experienced significant power shortages. As a result, energy costs in California, including natural gas and electricity, may rise significantly over the next year. Because our principal operating facilities are located in California, our operating expenses may increase significantly if this trend continues. In addition, California has on some occasions implemented, and may in the future continue to implement, rolling blackouts throughout the state. If

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

blackouts interrupt our power supply, we may be temporarily unable to operate. Any such interruption in our ability to continue operations could delay the development, marketing and sale of our application suite. Future interruptions could damage our reputation, harm our ability to retain existing customers and to obtain new customers, and could result in lost revenue, any of which could have an adverse effect on our operating results.

Our directors and executive officers maintain significant control over Blue Martini Software, which may lead to conflicts with other stockholders over corporate governance.

Our directors, executive officers and holders of 5% or more of our outstanding common stock beneficially owned approximately 56.9% of our outstanding common stock as of July 13, 2001. Monte Zweben, our Chairman, President and Chief Executive Officer, together with related entities, beneficially owned approximately 39.4% of our common stock as of this date. These stockholders, acting together, and Mr. Zweben, individually, will be able to significantly influence all matters requiring approval by our stockholders, including the election of directors and significant corporate transactions, such as mergers or other business combination transactions. This control may delay or prevent a third party from acquiring or merging with us.

23

Intangible asset risk

We have approximately \$4.8 million of intangible assets. At June 30, 2001 we believe our intangible assets are recoverable. However, changes in the economy, the business in which we operate and our own relative performance could change the assumptions used to evaluate intangible asset recoverability. We continue to monitor those assumptions and their effect on the estimated recoverability of our intangible assets.

There may be sales of a substantial amount of our common stock in the near future that could cause our stock price to fall.

Some of our current stockholders hold a substantial number of shares, which they are able to sell in the public market, subject to restrictions under the Securities Act. Sales of a substantial number of shares of our common stock within a short period of time could cause our stock price to fall. In addition, the sale of these shares could impair our ability to raise capital through the sale of additional stock.

We have implemented anti-takeover provisions that could discourage or prevent a takeover, even if an acquisition would be beneficial to our stockholders.

Provisions of our amended and restated certificate of incorporation and bylaws, as well as provisions of Delaware law, could make it more difficult for a third party to acquire us, even if doing so would be beneficial to our stockholders. These provisions include:

- . establishment of a classified board of directors requiring that not all members of the board may be elected at one time;
- . authorizing the issuance of "blank check" preferred stock that could be issued by our board of directors to increase the number of outstanding shares and thwart a takeover attempt;
- . prohibiting cumulative voting in the election of directors, which would otherwise allow less than a majority of stockholders to elect director candidates;

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

- . limitations on the ability of stockholders to call special meetings of stockholders;
- . prohibiting stockholder action by written consent and requiring all stockholder actions to be taken at a meeting of our stockholders; and
- . establishing advance notice requirements for nominations for election to the board of directors or for proposing matters that can be acted upon by stockholders at stockholder meetings.

In addition, Section 203 of the Delaware General Corporations Law and the terms of our stock option plans may discourage, delay or prevent a change in control of the Company.

Recent Accounting Pronouncements

In June 1998, the Financial Accounting Standards Board ("FASB") issued SFAS 133, Accounting for Derivative Instruments and Hedging Activities. The new standard establishes accounting and reporting standards for derivative instruments, including certain derivative instruments embedded in other contracts, and for hedging activities. It requires companies to record derivatives on the balance sheet as assets or liabilities, measured at fair value. Accounting for changes in the values of those derivatives depends on the intended use of the derivatives and whether they qualify for hedge accounting. SFAS 133, as amended by SFAS 137 and SFAS 138, is effective for fiscal years beginning after June 15, 2000. The Company has not entered into derivatives contracts either to hedge existing risks or for speculative purposes. Accordingly, the Company does not expect adoption of the new standard to affect its consolidated financial statements.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

Foreign Currency Exchange Rate Risk

Through June 30, 2001, the majority of our recognized revenues have been denominated in United States dollars and were from both domestic and international customers. Our exposure to foreign currency exchange rate changes has been immaterial. We expect that future license and service revenues will continue to be derived from international markets and may be denominated in the currency of the applicable market. Through June 30, 2001, we have expanded our international operations and have hired personnel in Europe and Asia Pacific. We have incurred operating expenses denominated in foreign currencies. Our future operating results may become subject to significant fluctuations based upon changes in the exchange rates of foreign currencies in relation to the United States dollar. We expect to continue to engage in international sales denominated in United States dollars. An increase in the value of the United States dollar relative to foreign currencies could make our products less competitive in international markets. Although we will continue to monitor our exposure to currency fluctuations and, when appropriate, may use economic hedging techniques in the future to minimize the effect of these fluctuations, we cannot assure you that exchange rate fluctuations will not adversely affect our financial results in the future. Through June 30, 2001, the Company had not engaged in foreign currency hedging activities.

Interest Rate Risk

Our exposure to financial market risk, including changes in interest rates, relates primarily to our investment portfolio. We typically do not attempt to

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

reduce or eliminate our market exposure on our investment securities because a substantial majority of our investments are in fixed rate securities with maturities not exceeding 18 months. We do not invest in any derivative instruments. The fair value of our investment portfolio or related income would not be significantly impacted by either a 100 basis point increase or decrease in interest rates due mainly to the relatively short-term nature of our available-for-sale investment portfolio.

PART II. OTHER INFORMATION

Item 1. Legal proceedings

In July 2001, a class action complaint was filed in the U.S. District Court for the Southern District of New York. The complaint asserts claims under the Securities Act and the Exchange Act against the underwriters of the Company's initial public offering, the Company, its directors and certain of its officers. The complaint alleges that the underwriters entered into certain arrangements with investors in connection with the Company's initial public offering, and that these alleged arrangements should have been and were not disclosed in the registration statement and prospectus. The complaint seeks unspecified monetary damages and attorneys' fees and other costs. Since the filing of the complaint, press releases have indicated that a number of similar complaints have been filed on behalf of various plaintiffs. The Company expects that these cases will be consolidated with the first action into a single case. The Company believes that it has meritorious defenses against the lawsuits and intends to defend itself vigorously.

25

Item 4. Submission of Matters to a Vote of Security Holders

The Company's annual meeting of stockholders was held on June 7, 2001 (the "Annual Meeting"). The following matters were considered and voted upon at the Annual Meeting:

- (a) To elect two directors, A. Michael Spence and Andrew W. Verhalen to hold office until the 2004 annual meeting of stockholders. The votes cast and withheld for such nominees were as follows:

	Votes For -----	Votes Withheld -----
A. Michael Spence.....	66,023,753	140,169
Andrew W. Verhalen.....	66,111,592	52,330

Directors continuing in office until the 2002 Annual Meeting:

Edward H. Vick
William F. Zuendt

Directors continuing in office until the 2003 Annual Meeting:

James C. Gaither
Monte Zweben

- (b) To ratify the selection of KPMG LLP as independent accountants for the Company for the year ended December 31, 2001. Shares voting:

For..... 66,068,881

Edgar Filing: BLUE MARTINI SOFTWARE INC - Form 10-Q

Against.....	49,031
Withheld.....	46,010
Broker non-vote.....	--

Based on these voting results, each of the directors nominated was elected and the second matter was approved.

Item 6. Exhibits and Reports on Form 8-K

(a) Exhibits

The following exhibits are filed herewith:

Exhibit Number	Description
3.1	Amended and Restated Certificate of Incorporation of the Registrant. /1/
3.2	Amended and Restated Bylaws of the Registrant. /2/
4.1	Specimen Stock Certificate. /3/
10.1	2000 Equity Incentive Plan, as amended. /4/
10.2	2000 Employee Stock Purchase Plan, as amended. /4/

/1/ Incorporated by reference to the Registrant's Form 10-Q for the six-month period ended June 30, 2000.

/2/ Incorporated by reference to the Registrant's Registration Statement on Form S-8 (No. 333-55374).

/3/ Incorporated by reference to the Registrant's Registration Statement on Form S-1 (No. 333-36062), as amended.

/4/ Incorporated by reference to the Registrant's Annual Report on Form 10-K for the year ended December 31, 2000.

(b) Reports on Form 8-K

No reports on Form 8-K were filed during the quarter ended June 30, 2001.

26

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.
