In October 2004, the Financial Accounting Standards Board ratified the final consensus of the Emerging Issues Task Force (EITF) on EITF 04-08, The Effect of Contingently Convertible Debt on Diluted Earnings per Share, which states that the impact of contingently convertible instruments that are convertible into common stock upon the achievement of a specified market price of the issuer s shares, such as Lear Corporation s (the Company) outstanding zero-coupon convertible senior notes, should be included in diluted net income per share computations regardless of whether the market price trigger has been met. The provisions are effective for reporting periods ending after December 15, 2004, and all prior period net income per share amounts presented will be restated to conform to the new provisions. The effect of EITF 04-08 on the calculation of diluted net income per share is to adjust net income by adding back after-tax interest expense related to the convertible senior notes and to increase total shares outstanding by the number of shares that would be issuable upon conversion. As of December 15, 2004, the Company s convertible senior notes did not meet the market price trigger and are not convertible. The pro forma effects of this new accounting pronouncement are shown below (in millions, except per share data):

(A) For the year ended December 31, 2002, the impact of the Company's outstanding zero-coupon convertible senior notes on net income per share is antidilutive. Potential common shares are included in the calculation of diluted net income per share based on whether their inclusion is dilutive or antidilutive to income per share before cumulative effect of a change in accounting principle. For the year ended December 31, 2002, income before cumulative effect of a change in accounting principle was \$311.5 million. The impact of the Company's convertible senior notes on income per share before cumulative effect of a change in accounting principle is approximately \$0.18 dilutive, from \$4.65 to \$4.47.

(B) The Company's outstanding zero-coupon convertible senior notes were issued on February 14, 2002.

The impact of the assumed conversion of the outstanding convertible senior notes is expected to reduce fourth quarter and full year 2004 net income per share by approximately \$0.08 and \$0.26 - \$0.27, respectively.
