Table of Contents**Notes to Consolidated Financial Statements
(Unaudited)****Note A Accounting Policies**

In management's opinion, the accompanying consolidated financial statements contain all adjustments necessary to present fairly the financial position as of June 27, 2008 and December 31, 2007 and the results of operations for the second quarter and first half ended June 27, 2008 and June 29, 2007. Sales and income before income taxes were reduced in the first quarter 2008 by \$2.6 million to correct a billing error that occurred in 2007 that was not material to the 2007 results. All other adjustments were of a normal and recurring nature.

Note B Inventories

<i>(Dollars in thousands)</i>	June 27, 2008	Dec. 31, 2007
Principally average cost:		
Raw materials and supplies	\$ 37,385	\$ 30,338
Work in process	156,534	156,789
Finished goods	66,110	54,530
Gross inventories	260,029	241,657
Excess of average cost over LIFO inventory value	78,940	76,468
Net inventories	\$ 181,089	\$ 165,189

The Company recorded lower of cost or market charges of approximately \$6.0 million in the second quarter 2008 and \$4.0 million in the second quarter 2007.

Note C Pensions and Other Post-retirement Benefits

<i>(Dollars in thousands)</i>	Pension Benefits		Other Benefits

Net periodic benefit cost	\$ 2,399	\$ 2,248	\$ 1,197	\$ 1,087

Table of Contents**Note D Contingencies**

Brush Wellman Inc., one of the Company's wholly owned subsidiaries, is a defendant in various legal proceedings where the plaintiffs allege that they have contracted chronic beryllium disease (CBD) or related ailments as a result of exposure to beryllium. Management believes that the Company has substantial defenses and intends to defend these suits vigorously. The Company has recorded a reserve for CBD litigation of \$1.5 million as of June 27, 2008 and \$1.3 million as of December 31, 2007. This reserve covers existing claims only and unasserted claims could give rise to additional losses. Defense costs are expensed as incurred. Final resolution of the asserted claims may be for different amounts than currently reserved. There were no settlement payments made during the first half of 2008 for CBD-related cases.

Under the terms of a settlement reached with certain of the Company's insurance carriers in the fourth quarter 2007, third party beryllium-related claims where the alleged exposure occurred prior to December 31, 2007 are covered by insurance subject to a \$1.0 million annual deductible for a fifteen year period ending in 2022. All of the cases outstanding as of June 27, 2008 are covered by this insurance. Both indemnity and defense costs are covered. Incurred costs were below the deductible in the first half of 2008.

Williams Advanced Materials Inc. (WAM), one of the Company's wholly owned subsidiaries, and a small number of WAM's customers are defendants in a patent infringement legal case. WAM has provided an indemnity agreement to certain of those customers under which WAM will pay any damages awarded by the court. WAM has not made any payments for damages on behalf of any customer nor have they recorded a reserve for losses under these agreements as of June 27, 2008. WAM believes it has strong defenses applicable to both WAM and its customers and is contesting this action. While WAM does not believe that a loss is probable, should their defenses not prevail, the damages to be paid may potentially be material to the Company's results of operations in the period of payment.

The Company has an active environmental compliance program and records reserves for the probable cost of identified environmental remediation projects. The reserves are established based upon analyses conducted by the Company's engineers and outside consultants and are adjusted from time to time based upon ongoing studies and the difference between actual and estimated costs. The reserves may also be affected by rulings and negotiations with regulatory agencies. The undiscounted reserve balance was \$5.1 million as of June 27, 2008 and \$5.2 million as of December 31, 2007. Environmental projects tend to be long term and the final actual remediation costs may differ from the amounts currently recorded.

Note E Comprehensive Income

The reconciliation between net income and comprehensive income for the second quarter and first half ended June 27, 2008 and June 29, 2007 is as follows:

(Dollars in thousands)	Second Quarter Ended		First Half Ended	
	June 27, 2008	June 29, 2007	June 27, 2008	June 29, 2007
Net income	\$ 7,158	\$ 7,939	\$ 11,754	\$ 31,053
Cumulative translation adjustment	(1,033)	(526)	1,731	(232)
Change in the fair value of derivative financial instruments	2,030	(1,256)	(765)	(3,847)
Pension and other retirement plan liability adjustments	123	263	247	524

Note G Stock-based Compensation Expense

The Company granted approximately 50,000 shares of restricted stock to certain employees in the first quarter 2008 at a fair value of \$27.78 per share. The fair value was determined using the closing price of the Company's stock on the grant date and will be amortized over the vesting period of three years. The shares will be forfeited should the holders employment terminate prior to the vesting period.

The Company granted approximately 32,000 stock appreciation rights (SARs) to certain employees in the first quarter 2008 at a strike price of \$27.78 per share. The fair value of the SARs, which was determined on the grant date using a Black-Scholes model, was \$14.05 per share and will be amortized over the vesting period of three years. The SARs expire ten years from the date of the grant.

The Company implemented a long-term incentive plan for the 2008 to 2010 time period for executive officers and certain other employees in the first quarter 2008. Awards under the plan are based upon the Company's performance during this time period and any payout at the end of the period may vary depending upon the degree to which the

actual performance exceeds the pre-determined threshold, target and maximum performance levels. Under the 2008 to 2010 long-term incentive plan, awards earned up to the target level will be settled in shares of the Company's stock. The portion of any awards earned in excess of the target up to the maximum payout will be settled in cash based upon the share price of the Company's stock at the end of the performance period. Compensation expense is based upon the current performance projections for the three-year period, the percentage of requisite service rendered and the market value of the Company's stock on the grant date. The offset to compensation expense is recorded within shareholders equity. The compensation expense for the portion of any payout in excess of target is based upon the market price of the Company's stock at the end of the period with the offset recorded as a liability.

The Company granted approximately 13,000 shares of restricted stock to its non-employee directors in the second quarter 2008 at a fair value of \$32.19 per share. The fair value was determined using the closing price of the Company's stock on May 7, 2008, the date of the annual meeting of shareholders, and will be amortized over the vesting period of one year.

Total share based compensation expense for the above and previously existing awards and plans was \$1.2 million in the second quarter 2008 and \$1.0 million in the second quarter 2007. For the first half of the year, share based compensation was \$2.5 million in 2008 and \$1.9 million in 2007.

Table of Contents**Note H Income Taxes**

The tax expense of \$3.8 million in the second quarter 2008 was calculated by applying a rate of 34.7% against income before income taxes while the tax expense of \$4.1 million in the second quarter 2007 was calculated by applying a rate of 34.1% in that period. For the first six months of the year, a rate of 36.8% was used in 2008 and 35.6% in 2007. The differences between the statutory and effective rates in both quarters and the six month periods were due to a combination of the impact of percentage depletion, foreign source income and deductions, the production deduction, executive compensation and other factors.

In addition to differences in the impact of the above items, the effective rate was lower in the second quarter 2008 than the first quarter 2008 due to discrete events, primarily a deferred tax adjustment in the first quarter. The lower tax rate reduced tax expense and increased net income by approximately \$0.6 million, or \$0.03 per share, in the second quarter 2008.

Note I Acquisition

On February 4, 2008, the Company acquired the operating assets of Techni-Met, Inc. of Windsor, Connecticut for \$87.4 million in cash. Techni-Met produces precision precious metal coated flexible polymeric films used in a variety of high-end applications, including diabetes diagnostic test strips. Techni-Met sources the majority of its precious metal requirements from the Company's Advanced Material Technologies and Services segment. Techni-Met employs approximately 45 people at its two facilities in the Windsor area.

The Company financed the acquisition with a combination of cash on hand and borrowing under the \$240.0 million revolving credit agreement. The purchase price included \$9.0 million to be held in escrow pending resolution of various matters as detailed in the purchase agreement. Immediately after the purchase, the Company sold Techni-Met's precious metal inventory to a financial institution for its fair value of \$24.3 million and consigned it back under the existing consignment lines.

Techni-Met's results are included in the Company's financial statements since the acquisition date and are reported as part of the Advanced Material Technologies and Services segment. The purchase price allocation is preliminary in that the Company has not yet completed its appraisal of the acquired tangible and intangible assets nor have the acquired deferred taxes been valued. The preliminary goodwill assigned to the transaction totaled \$17.9 million.

Assuming that the Techni-Met acquisition occurred on January 1, 2007, the pro forma effect on selected line items from the Company's Consolidated Statement of Income are as follows:

	Pro Forma Results			
	Second Quarter Ended		First Half Ended	
	June 27, 2008	June 29, 2007	June 27, 2008	June 29, 2007
<i>(Dollars in thousands, except per share amounts)</i>				
Sales	\$ 246,584	\$ 232,494	\$ 476,738	\$ 491,058
Income before income taxes	10,963	13,264	20,061	50,197
Net Income	7,158	8,697	12,658	32,284
Diluted earnings per share	\$ 0.35	\$ 0.42	\$ 0.61	\$ 1.56

The pro forma sales in the second quarter 2007 are lower than the reported sales as actual sales from the Company to Techni-Met exceeded Techni-Met's external sales in that period.

Note J Fair Value of Financial Instruments

The Company adopted FASB Statement No. 157, Fair Value Measurements as of January 1, 2008 and no adjustments to the fair values of any assets or liabilities were recorded as a result of the adoption of the statement. The Company currently measures and records in the accompanying consolidated financial statements foreign currency and interest rate derivative contracts at fair value. Statement No. 157 establishes a fair value hierarchy for

Table of Contents

those instruments measured at fair value that distinguishes between assumptions based on market data (observable inputs) and the Company's assumptions (unobservable inputs). The hierarchy consists of three levels:

Level 1 Quoted market prices in active markets for identical assets and liabilities;

Level 2 Inputs other than Level 1 inputs that are either directly or indirectly observable; and

Level 3 Unobservable inputs developed using estimates and assumptions developed by the Company, which reflect those that a market participant would use.

The following table summarizes the financial instruments measured at fair value in the accompanying Consolidated Balance Sheet as of June 27, 2008:

<i>(Dollars in thousands)</i> Description	June 27, 2008	Fair Value Measurements at Reporting Date Using		
		Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Financial Assets				
Foreign currency contracts				
Forward Contracts	\$ 33	\$	\$ 33	\$
Total	\$ 33	\$	\$ 33	\$
Financial Liabilities				
Foreign currency contracts				
Forward Contracts	1,466		1,466	
Options	637		637	
Interest rate exchange contracts	334		334	
Total	\$ 2,437	\$	\$ 2,437	\$

The Company uses a market approach to value the assets and liabilities for outstanding derivative contracts in the table above. These contracts are valued using a market approach which incorporates quoted market prices at the balance sheet date.

Note K New Pronouncement

The Financial Accounting Standards Board issued Statement No. 159, The Fair Value Option for Financial Assets and Financial Liabilities including an amendment of FASB Statement No. 115 in the first quarter 2007. The statement

allows entities to value financial instruments and certain other items at fair value. The statement provides guidance over the election of the fair value option, including the timing of the election and specific items eligible for fair value accounting treatment. Changes in fair values would be recognized in earnings. The statement is effective for fiscal years beginning after November 15, 2007. The Company adopted this statement effective January 1, 2008 but did not implement the optional provisions of the statement.

Note L Subsequent Event

In July 2008, the Company's Board of Directors authorized the repurchase up to 1.0 million shares of the Company's outstanding shares of common stock. The primary purpose of the program is to offset dilution created by shares issued under stock-based compensation plans. The program may be suspended or discontinued at any time.

Table of Contents**Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations****Overview**

We are an integrated producer of high performance specialty engineered materials used in a variety of electrical, electronic, thermal and structural applications. Our products are sold into numerous markets, including telecommunications and computer, data storage, aerospace and defense, automotive electronics, industrial components, appliance and medical.

Sales in the second quarter 2008 were \$246.6 million compared to \$233.6 million in the second quarter 2007. Sales for the first half of 2008 were \$472.9 million compared to \$483.9 million in the first half of 2007.

Sales in 2008 have increased as a result of the pass-through of higher precious and base metal pricing and the translation impact of the weaker U.S. dollar. Total underlying volumes for both the second quarter and first half of 2008 were below the respective periods of 2007. The decline in sales in the first half of was due to a significant fall-off in shipments of ruthenium-based products for media applications in the data storage market. While we were discouraged by the results of our media-related business, other portions of our business continued to perform well in the second quarter 2008.

The acquisition of Techni-Met, Inc. in February 2008 for \$87.4 million has also provided a benefit to our sales and profitability in the second quarter and first half of 2008. We believe that in the long term Techni-Met provides technology that we can couple with our existing businesses to penetrate additional market opportunities.

Although we recorded a lower of cost or market charge of approximately \$6.0 million during the second quarter 2008 due to the falling market price for ruthenium, gross margin improved \$3.0 million over the second quarter 2007 as a result of Techni-Met, a favorable change in product mix, improved manufacturing performance at various facilities and other factors.

The gross margin improvement, however, was more than offset by an increase in selling, general and administrative costs, higher metal financing fees and foreign currency exchange losses and the resulting operating profit of \$11.6 million in the second quarter 2008 was 8% lower than the operating profit in the second quarter 2007.

Total debt, after increasing in the first quarter 2008 as a result of the Techni-Met acquisition, capital expenditures and other working capital changes, declined \$3.2 million in the second quarter 2008 while cash increased \$2.9 million. Cash flow from operations was positive during the second quarter. The debt-to-debt-plus-equity ratio improved to 19% as of the end of the second quarter and we had significant available borrowing capacity remaining on our existing credit lines.

Results of Operations

	Second Quarter		First Half Ended	
	Ended June 27, 2008	June 29, 2007	June 27, 2008	June 29, 2007
<i>Millions, except per share data</i>				
Sales	\$ 246.6	\$ 233.6	\$ 472.9	\$ 483.9

Edgar Filing: BRUSH ENGINEERED MATERIALS INC - Form 10-Q

Operating profit	11.6	12.6	19.6	49.5
Income before income taxes	11.0	12.0	18.6	48.2
Net income	7.2	7.9	11.8	31.1
Diluted earnings per share	\$ 0.35	\$ 0.38	\$ 0.57	\$ 1.50

Sales of \$246.6 million in the second quarter 2008 were 6% higher than sales of \$233.6 million in the second quarter 2007. For the first six months of the year, sales of \$472.9 million in 2008 were 2% lower than sales of \$483.9 million in 2007.

We use ruthenium, gold, silver, platinum, palladium and copper in the manufacture of various products. Our sales are affected by the prices for these metals, as changes in our purchase price are passed on to our customers in the form of higher or lower selling prices. Average ruthenium prices were lower in the second quarter and first half of 2008 than in the same periods in 2007 while the average prices of copper and various precious metals were higher.

Table of Contents

Changes in the prices for these metals resulted in a net estimated \$23.4 million increase in sales in the second quarter 2008 as compared to the second quarter 2007 and a \$43.1 million increase in sales the first half of 2008 as compared to the first half of 2007.

Sales in the second quarter 2008 were lower than the second quarter 2007 after adjusting for the metal price differential between periods. This decline, as well as the decline in sales in the first six months of 2008, was largely due to softer shipments of ruthenium-based products for media applications in the data storage market. Shipments of our products to this market, which were very strong in the first half of 2007, were weak throughout the first half of 2008. The ruthenium products sales value was also lower in 2008 than 2007 due to a higher percentage of product sold being manufactured from customer supplied metal rather than metal that we owned. Volumes of ruthenium products shipped in the second quarter 2008 were higher than the volumes shipped in the first quarter 2008, but the quantity was below each quarter in 2007.

Demand from a number of our other markets was solid in the second quarter and first half of 2008 and sales from portions of our businesses were higher than the year-ago period, offsetting a portion of the decline in sales to the media market. Sales in 2008 also benefited from the acquisition of Techni-Met during the first quarter 2008 while the development of new products continued to offer additional growth opportunities.

Total international sales were \$89.1 million in the second quarter 2008 compared to \$98.4 million in the second quarter 2007 while international sales in the first half of 2008 of \$165.7 million were 23% lower than the first half of last year. This decline is mainly due to the lower sales of ruthenium-based products into Asia. European sales increased 14% in the first half of 2008. International sales were 35% of sales in the first half of 2008 and 44% of sales in the first half of 2007. The effect of translating foreign currency denominated sales was a favorable \$3.0 million in the second quarter 2008 as compared to the second quarter 2007 and \$5.7 million in the first half of 2008 compared to the first half of 2007. While international sales declined, domestic sales increased 16% over the second quarter 2007 and 14% in the first half of 2008.

In the first quarter 2008, we reduced sales and accounts receivable by \$2.6 million in order to correct an error from 2007. The error was discovered late in the first quarter 2008 and resulted from inaccurate billings to one customer during the second half of 2007. We determined that the error was not material in accordance with SAB 99 and APB No. 28 and therefore the 2007 financial statements were not adjusted. Correction of the error also reduced the gross margin by \$2.6 million in the first quarter 2008.

Gross margin was \$44.8 million, or 18% of sales, in the second quarter 2008 compared to \$41.8 million, or 18% of sales, in the second quarter 2007. For the first half of the year, gross margin was \$81.9 million, or 17% of sales, in 2008 and \$111.2 million, or 23% of sales, in 2007.

The acquisition of Techni-Met had a positive impact on the gross margin in both the second quarter and first half of 2008. The change in product mix improved in the second quarter 2008 after being unfavorable in the first quarter 2008. Yield and performance improvements offset a portion of the unfavorable mix effect during the first half of the year. Margins were reduced as a result of lower underlying volumes in both the second quarter and first half of 2008 as compared to the same periods in 2007. Manufacturing overhead costs, excluding the incremental costs incurred by Techni-Met, were relatively flat for both the quarter and year-to-date periods.

In addition to the volume impact, margins were \$1.6 million lower in the second quarter 2008 than the second quarter 2007 and \$18.5 million lower in the first half of 2008 than the first half of 2007 as a result of a combination of factors associated with the ruthenium business as described below.

Due to the rapidly declining market price for ruthenium, we recorded a lower of cost or market charge of approximately \$6.0 million in the second quarter 2008. Despite the strong end-use demand for ruthenium-containing products primarily for the hard disk drive applications, ruthenium inventories throughout the supply chain were high in the first half of 2008. With long lead times, especially in refining operations, and the rush to convert to the perpendicular magnetic recording technology, large inventory positions were built up in 2007. Through the end of the second quarter 2008, rather than purchasing virgin material, customers generally have been working off their inventory positions and are returning their refined and recycled materials to fabricators such as us to manufacture into new targets on a toll basis for them. With limited open-market purchases and softer demand for

Table of Contents

virgin material, the quoted market price for ruthenium dropped throughout the second quarter and was below our carrying cost for a significant portion of our inventory, resulting in the charge.

The gross margin in 2007 was affected by both rapidly increasing and decreasing prices for ruthenium. The price of ruthenium escalated in the second half of 2006 and was significantly higher than the carrying cost of the inventory as of December 31, 2006. Sales of this existing lower cost inventory at the current market prices and other inventory transactions increased total gross margins by \$4.5 million in the second quarter 2007 and \$21.4 million in the first half of 2007. We subsequently changed our pricing practices so that the purchase price of ruthenium forms the basis for our selling price so this benefit did not occur in 2008. The ruthenium selling price declined toward the end of the second quarter 2007 from the high levels earlier in the year and as a result we recorded a lower of cost or market charge of \$4.0 million in that period. Gross margin was also adversely affected by \$4.9 million in the second quarter 2007 by a manufacturing quality issue in the production of ruthenium targets that resulted in customer returns, additional costs and inventory losses.

Selling, general and administrative expenses (SG&A) of \$28.5 million in the second quarter 2008 were \$1.9 million, or 7%, higher than expenses of \$26.6 million in the second quarter 2007. SG&A expenses totaled \$55.3 million in the first half of 2008 compared to \$55.2 million in the first half of 2007. SG&A expenses were 12% of sales in the first half of 2008 and 11% in the first half of 2007.

Incentive compensation expense was \$0.4 million higher in the second quarter 2008 than the second quarter 2007 but \$3.3 million lower in the first six months of 2008 than the first six months of 2007 due to the lower levels of profitability in the current year relative to the plan targets as well as the impact of the lower share price of our stock on plan payouts.

Techni-Met incurred \$1.0 million of expenses in the second quarter 2008 and \$1.5 million of expenses since its acquisition in the first quarter 2008.

The currency effect of translating the expenses incurred by our foreign operations was an unfavorable \$0.7 million due to the weaker U.S. dollar in the second quarter 2008 and \$1.3 million in the first six months of 2008 as compared to the same periods in 2007.

Various corporate costs were higher in the second quarter and first half of 2008 but were somewhat offset by lower costs among the business units.

Research and development expenses (R&D) totaled \$1.6 million in the second quarter 2008 and \$1.3 million in the second quarter 2007. For the first half of the year, R&D expenses were \$3.1 million in 2008 and \$2.6 million in 2007. R&D spending increased slightly in 2008 as a result of increased process and product improvement efforts.

Other-net expense for the second quarter and first half of 2008 and 2007 is summarized as follows:

<i>Millions</i>	Income (expense)			
	Second Quarter		First Half Ended	
	Ended June 27, 2008	June 29, 2007	June 27, 2008	June 29, 2007
Exchange losses	\$ (1.6)	\$ (0.5)	\$ (1.3)	\$ (0.8)

Edgar Filing: BRUSH ENGINEERED MATERIALS INC - Form 10-Q

Directors' deferred compensation	0.1	0.5	0.6	(0.5)
Derivative ineffectiveness		0.1	(0.2)	0.1
Metal financing fee	(1.2)	(0.4)	(2.0)	(1.0)
Loss on sale of business				(0.3)
Other items	(0.4)	(1.0)	(1.0)	(1.4)
Total	\$ (3.1)	\$ (1.3)	\$ (3.9)	\$ (3.9)

Exchange and translation gains and losses are a function of the movement in the value of the U.S. dollar versus certain other currencies and in relation to the strike prices in currency hedge contracts. A weaker U.S. dollar generally results in exchange and translation losses for us.

Table of Contents

Derivative ineffectiveness results from the changes in the fair value of an interest rate swap that does not qualify for hedge accounting treatment. The \$0.2 million expense in 2008 resulted from the swap's fixed rate being higher than the applicable prevailing interest rates.

The income or expense on the directors' deferred compensation plan is a function of the outstanding shares in the plan and the movement in the share price of our stock. Income of \$0.6 million was recorded in the first half of 2008 as a result of a decline in the stock price.

The metal financing fee was higher in the second quarter 2008 and first half of 2008 than the comparable periods in 2007. The financing fee increased due to the higher quantity on hand and higher precious metal prices.

In the first quarter 2007, we sold substantially all of the operating assets and liabilities of Circuits Processing Technology, Inc. (CPT), a wholly owned subsidiary that manufactures thick film circuits, for \$2.2 million. CPT, which was acquired in 1996, was a small operation with limited growth opportunities. The loss on the sale was \$0.3 million.

Net-other also includes the amortization of intangible assets, bad debt expense, gains and losses on the disposal of fixed assets, cash discounts and other non-operating items.

Operating profit was \$11.6 million in the second quarter 2008 compared to \$12.6 million in the second quarter 2007. For the first six months of the year, operating profit was \$19.6 million in 2008 and \$49.5 million in 2007. The lower profit resulted from the margin impact of the lower underlying sales volume, the change in ruthenium pricing practices, the lower of cost or market charge and other factors affecting gross margins.

Interest expense net was \$0.6 million in both the second quarter 2008 and the second quarter 2007. For the first half of 2008, interest expense was \$1.0 million, a decrease of \$0.3 million from the first half of 2007. Outstanding debt levels were below the first half 2007 average at the beginning of 2008 but then increased during the first quarter due to the Techni-Met acquisition and other factors. The impact of the higher debt was offset in part by a lower effective borrowing rate in 2008 while interest capitalized in association with long-term capital projects was \$0.1 million higher in the first half of 2008 than it was in the first half of 2007.

Income before income taxes was \$11.0 million in the second quarter 2008 versus \$12.0 million in the second quarter 2007. For the first half of the year, income before income taxes declined from \$48.2 million in 2007 to \$18.6 million in 2008.

Tax expense was calculated using an effective rate of 34.7% of income before income taxes in the second quarter 2008 and 34.1% of income before income taxes in the second quarter 2007. The effective tax rate for the first six months of 2008 was 36.8% compared to 35.6% in the first six months of 2007.

The effects of percentage depletion, foreign source income and deductions, executive compensation, the production deduction and other factors were the major factors for the difference between the effective and statutory rates in both the first six months of 2008 and 2007. The effective tax rate was lower in the second quarter 2008 than the first quarter 2008 partially due to the impact of discrete events recorded in the first quarter. This lower tax rate improved net income by \$0.6 million, or \$0.03 per share in the second quarter 2008 as compared to the first quarter 2008. See Note H to the Consolidated Financial Statements.

Net income was \$7.2 million in the second quarter 2008 compared to \$7.9 million in the second quarter 2007. For the first half of the year, net income was \$11.8 million in 2008 and \$31.1 million in 2007. Diluted earnings per share were \$0.35 in the second quarter 2008 and \$0.38 in the second quarter 2007. June year-to-date diluted earnings per share

were \$0.57 in 2008 and \$1.50 in 2007.

Segment Results

We have four reporting segments. The results from the corporate office and Zentrix Technologies Inc. are included in the All Other column of our segment reporting. See Note F to the Consolidated Financial Statements. The operating results for All Other declined \$2.0 million in the first half of 2008 from the first half of 2007 largely due to higher corporate costs, lower corporate charges out to the segments and other factors offset in part by lower incentive compensation expense.

Table of Contents**Advanced Material Technologies and Services**

<i>Millions</i>	Second Quarter Ended		First Half Ended	
	June 27, 2008	June 29, 2007	June 27, 2008	June 29, 2007
Sales	\$ 125.4	\$ 121.3	\$ 246.1	\$ 264.9
Operating profit	\$ 4.8	\$ 4.9	\$ 10.1	\$ 36.8

Advanced Material Technologies and Services manufactures precious, non-precious and specialty metal products, including vapor deposition targets, frame lid assemblies, clad and precious metal preforms, high temperature braze materials, ultra-fine wire, specialty inorganic materials and precision precious metal coated films. Major markets for these products include data storage, medical and the wireless, semiconductor, photonic and hybrid sectors of the microelectronics market. Advanced Material Technologies and Services also has metal cleaning operations and an in-house refinery that allows for the reclaim of precious metals from its own or customers' scrap. Due to the high cost of precious metal products, we emphasize quality, delivery performance and customer service in order to attract and maintain applications. This segment has domestic facilities in New York, California, Wisconsin and Connecticut and international facilities in Asia and Europe.

Sales from Advanced Material Technologies and Services were \$125.4 million in the second quarter 2008, an increase of \$4.1 million, or 3%, over the second quarter 2007. Sales from this segment totaled \$246.1 million in the first half of 2008 compared to \$264.9 million in the first half of 2007.

Sales for media applications in the data storage market, primarily ruthenium targets manufactured at the Brewster, New York facility, declined approximately \$22.7 million in the second quarter 2008 and \$79.7 million in the first half of 2008 from the comparable periods a year ago excluding the impact of changes in ruthenium prices. Media application demand was very strong in the first half of 2007 as customers were ramping up on ruthenium-based products for the conversion to the new perpendicular magnetic recording technology. While the overall market demand has remained strong, our shipments to this market were soft throughout the first half of 2008. Re-qualification work on ruthenium targets after a specification change at a major customer in the fourth quarter 2007 continued during the first half of 2008. Our marketing and engineering staffs are also working on developing and qualifying new products and applications, including oxide and soft underlayer coatings for disk drives, with existing and new customers within this market. The number of targets shipped in the second quarter 2008 improved over the first quarter 2008.

As noted previously, in the first half of 2008, we were generally manufacturing ruthenium targets on a toll basis using customer supplied material as opposed to manufacturing products using virgin material purchased by us or material from our recycle stream. Of the \$79.7 million decline in media application sales, an estimated \$22.5 million (or 28%) is due to this shift and not from a decline in the underlying business.

Higher metal prices, growth in sales to other markets and the Techni-Met acquisition helped to offset a portion of the decline in sales to the media market in both the second quarter and first half of 2008.

Advanced Material Technologies and Services adjusts the majority of its selling prices daily to reflect the current cost of the precious and certain other metals that are sold. The cost of the metal is generally a pass-through to the customer and a margin is generated on the fabrication efforts irrespective of the type or cost of the metal used in a given application. Therefore, the cost and mix of metals sold will affect sales but not necessarily the margins generated by

those sales. The prices of gold, silver, platinum and palladium were higher on average in the first half of 2008 than in the first half 2007 while the price of ruthenium was lower. The combination of these price differences increased sales by \$19.6 million in the second quarter 2008 over the second quarter 2007 and \$37.9 million in the first six months of 2008 over the first six months of 2007.

Sales of vapor deposition targets and other products manufactured at the Buffalo, New York facility for photonics and wireless applications increased in the second quarter and first half of 2008 over the comparable periods in 2007 due to both volumes and higher metal prices. Sales of materials for LED applications continued to improve as well. Sales from Thin Film Technology, Inc., which produces lids for defense and medical applications, increased in the second quarter and first half of 2008 and the new sales order entry rate for these products was very

Table of Contents

strong. Sales of inorganic chemicals from CERAC, which are used in optics, solar energy and other applications, also were higher in the first two quarters of 2008 than the first two quarters of 2007.

The acquisition of Techni-Met provided a small increase to the total segment sales in 2008 as Techni-Met sources its precious metals through the Buffalo facility so the net increase in sales is limited to the value added by Techni-Met over the sales value from Buffalo. Techni-Met produces precision precious metal coated polymeric films used primarily in medical applications. The operation also contributed to the segment's profitability in the second quarter and first six months of 2008.

The gross margin on Advanced Material Technologies and Services sales was \$16.4 million in the second quarter 2008 compared to \$15.9 million in the second quarter 2007. Gross margin was 13% of sales in both periods. For the first half of the year, gross margin was \$32.6 million (13% of sales) in 2008 and \$57.9 million (22% of sales) in 2007.

The segment gross margin was reduced by the lower of cost or market charge on ruthenium inventories in the second quarter 2008 as discussed previously. The previously discussed ruthenium benefit, quality charge and lower of cost or market charge from 2007 also affected the gross margins of this segment.

The lower volume reduced margins in both the second quarter and first half of 2008 compared to the respective periods in 2007. The change in product mix has been favorable in 2008, more so in the second quarter than the first quarter. Techni-Met also had a greater impact on margins in the second quarter 2008 than the first quarter. The \$2.6 million error correction in the first quarter 2008 reduced the year-to-date gross margin of this segment. Manufacturing overhead costs increased \$2.6 million in the second quarter and \$5.1 million in the first half of 2008 compared to the same periods of last year. The primary causes for the increase include the acquisition of Techni-Met, the new facility in the Czech Republic, the expansion of the Brewster and Wheatfield, New York facilities and other factors.

Total SG&A, R&D and other-net expenses were \$11.7 million in the second quarter 2008 and \$11.0 million in the second quarter 2007. Expenses were 9% of sales in both periods. These expenses totaled \$22.5 million in the first half of 2008 (9% of sales), an increase of \$1.5 million over expenses of \$21.0 million (8% of sales) in the first half of 2007.

Expenses incurred by Techni-Met since its acquisition, higher metal consignment fees, additional R&D activities and the unfavorable translation effect on foreign subsidiaries' expenses partially offset by lower incentive compensation accruals were the main causes for the higher expense in the second quarter and first half of 2008.

Operating profit from Advanced Material Technologies and Services was \$4.8 million in the second quarter 2008 compared to \$4.9 million in the second quarter 2007. For the first half of the year, operating profit was \$10.1 million in 2008 and \$36.8 million in 2007. Operating profit was 4% of sales in the first half of 2008 and 14% of sales in the first half of 2007. The decline in segment profitability was due to the significant fall-off in the ruthenium business, including the impact of price movements and inventory adjustments, offset in part by improvements in other portions of the business and the acquisition of Techni-Met.

Specialty Engineered Alloys

	Second Quarter		First Half Ended	
	Ended	Ended	Ended	Ended
<i>Millions</i>	June 27, 2008	June 29, 2007	June 27, 2008	June 29, 2007

Sales	\$ 83.0	\$ 75.5	\$ 154.3	\$ 145.9
Operating profit	\$ 4.8	\$ 1.4	\$ 5.5	\$ 6.7

Specialty Engineered Alloys manufactures and sells three main product families:

Strip products, the larger of the product families, include thin gauge precision strip and small diameter rod and wire. These copper and nickel beryllium alloys provide a combination of high strength, high conductivity, high reliability and formability for use as connectors, contacts, switches, relays and shielding. Major markets for strip products include telecommunications and computer, automotive electronics and appliances;

Table of Contents

Bulk products are copper and nickel-based alloys manufactured in plate, rod, bar, tube and other customized forms that, depending upon the application, may provide superior strength, corrosion or wear resistance or thermal conductivity. The majority of bulk products contain beryllium. Applications for bulk products include plastic mold tooling, bearings, bushings, welding rods, oil and gas drilling components and telecommunications housing equipment; and,

Beryllium hydroxide is produced by Brush Resources Inc., a wholly owned subsidiary, at its milling operations in Utah from its bertrandite mine and purchased beryl ore. The hydroxide is used primarily as a raw material input for strip and bulk products as well as by the Beryllium and Beryllium Composites segment. External sales of hydroxide from the Utah operations totaled \$3.3 million in the second quarter 2008 and \$2.5 million in the second quarter 2007. There were no sales of hydroxide in the first quarter of either year.

Strip and bulk products are manufactured at facilities in Ohio and Pennsylvania and are distributed worldwide through a network of company-owned service centers and outside distributors and agents.

Sales by Specialty Engineered Alloys of \$83.0 million in the second quarter 2008 grew 10% over sales of \$75.5 million in the second quarter 2007. Sales in the first half of 2008 of \$154.3 million were a 6% improvement over sales of \$145.9 million in the first half of 2007.

The pass-through of the higher base metal prices and the favorable translation effect on the foreign subsidiaries sales contributed to the increased sales in the second quarter 2008. These factors more than offset a slight decline in volumes in the first half of 2008 as compared to the first half of 2007.

Strip volumes shipped in the second quarter 2008 were 9% lower than the second quarter 2007 while the volumes shipped in the first half of 2008 were 11% lower than the year ago period. Shipments of lower beryllium-containing alloy products were down more significantly than shipments of the higher beryllium-containing products. Shipments of rod and wire products improved in the second quarter after declining in the first quarter. Demand for materials for handset applications, which began to soften after the first quarter last year, flattened out in the second quarter 2008 while the year-to-date demand was below the comparable period in 2007. Sales for appliance applications increased in the second quarter over the first quarter 2008 while automotive electronic applications continued to be solid in the second quarter 2008.

Bulk product volumes shipped increased 13% in the second quarter 2008 over the second quarter 2007 and 12% in the first half of 2008 over the first half of 2007 due to strong demand from oil and gas, heavy equipment and undersea telecommunications applications. Shipments for aerospace applications, which had been stronger in the first quarter 2008, began to soften in the second quarter.

The gross margin on Specialty Engineered Alloys sales was \$19.4 million in the second quarter 2008 compared to \$14.8 million in the second quarter 2007. Gross margin improved from 20% of sales in the second quarter 2007 to 23% of sales in the second quarter 2008. For the first half of the year, the gross margin was \$33.0 million, or 21% of sales, in 2008 and \$33.6 million, or 23% of sales, in 2007.

The growth in the gross margin in the second quarter 2008 over the second quarter 2007 was due to a favorable change in product mix, foreign currency benefits, improved yields and operating performance, the benefits from the higher hydroxide sales and lower manufacturing overhead costs offset partially by the impact of lower underlying volumes.

The gross margin declined slightly in the first half of 2008 compared to the first half of 2007 as the lower volume had a larger impact and the change in product mix was not as favorable as it was in the second quarter.

Total SG&A, R&D and other-net expenses were \$14.6 million in the second quarter 2008, an increase of \$1.2 million from expenses totaling \$13.4 million in the second quarter 2007. For the first half of the year, expenses were \$27.5 million in 2008 compared to \$26.9 million in 2007; expenses were 18% of sales in both of these periods. The expense increase in the quarter and year-to-date period was largely due to higher incentive accruals (resulting from the improved performance relative to the plan provisions), the unfavorable translation impact on the foreign operations expenses and higher foreign currency exchange losses partially offset by lower corporate charges and international selling expenses.

Table of Contents

The operating profit generated by Specialty Engineered Alloys totaled \$4.8 million in the second quarter 2008, a \$3.4 million improvement over the operating profit of \$1.4 million in the second quarter 2007. For the first half of the year, operating profit was \$5.5 million, or 4% of sales in 2008 compared to \$6.7 million, or 5% of sales, in 2007.

Beryllium and Beryllium Composites

<i>Millions</i>	Second Quarter		First Half Ended	
	Ended June 27, 2008	June 29, 2007	June 27, 2008	June 29, 2007
Sales	\$ 14.7	\$ 16.5	\$ 28.1	\$ 31.7
Operating profit	\$ 2.3	\$ 2.4	\$ 2.6	\$ 4.6

Beryllium and Beryllium Composites manufactures beryllium-based metals and metal matrix composites in rod, tube, sheet, foil and a variety of customized forms at the Elmore, Ohio and Fremont, California facilities. These materials are used in applications that require high stiffness and/or low density and they tend to be premium priced due to their unique combination of properties. This segment also manufactures beryllia ceramics through our wholly owned subsidiary Brush Ceramic Products in Tucson, Arizona. Defense and government-related applications, including aerospace, is the largest market for Beryllium and Beryllium Composites, while other markets served include medical, telecommunications and computer, electronics (including acoustics), optical scanning and automotive electronics.

Sales by Beryllium and Beryllium Composites totaled \$14.7 million in the second quarter 2008 versus \$16.5 million in the second quarter 2007. For the first six months of the year, sales declined from \$31.7 million in 2007 to \$28.1 million in 2008.

The decline in sales in the second quarter and first half of the year was due in part to the completion of shipments in prior periods for two large stand-alone projects, the JET nuclear fusion reactor and the Webb telescope. Sales for these two projects totaled \$1.2 million in the second quarter 2007 and \$1.8 million in the first half of 2007.

Defense-related sales, which softened in the first quarter 2008 due to specific program delays, began to strengthen in the second quarter 2008. Sales order entry rates as well as quoting activity have improved and we anticipate that defense-related sales will grow in the second half of 2008.

Sales for medical and industrial x-ray window applications were lower in the first half of 2008 as compared to a strong first half of 2007, partially due to customers' inventory positions. We anticipate that sales of these products will show modest growth in future periods.

Sales of beryllia ceramics in the second quarter 2008 were flat with the second quarter 2007 and down 4% for the first half of 2008.

The gross margin on Beryllium and Beryllium Composites' sales was \$5.1 million, or 35% of sales, in the second quarter 2008 and \$5.9 million, or 36% of sales, in the second quarter 2007. The gross margin for the first half of 2008 was \$8.4 million, or 30% of sales, compared to a gross margin of \$10.9 million, or 34% of sales, in the first half of 2007.

The majority of the difference in margins between the second quarter and first half of 2008 and the respective periods in 2007 was due to the lower sales volume. Improved plant performance and scrap recovery efforts helped to offset a portion of the unfavorable volume effect. An increase in manufacturing overhead costs also contributed to the lower margins in the second quarter and first half of 2008.

SG&A, R&D and other-net expenses for Beryllium and Beryllium Composites were \$2.8 million in the second quarter 2008 and \$3.5 million in the second quarter 2007. For the first half of the year, these expenses totaled \$5.8 million, or 21% of sales, in 2008 and \$6.4 million, or 20% of sales, in 2007.

Incentive compensation, foreign currency exchange losses and corporate charges were lower in the second quarter and first half of 2008 than the respective periods in 2007.

Table of Contents

Selling expenses, including manpower and product samples, were higher in the first half of 2008 than the first half of 2007.

Operating profit for Beryllium and Beryllium Composites was \$2.3 million in the second quarter 2008, a slight decline from the operating profit of \$2.4 million generated in the second quarter 2007. Operating profit was \$2.6 million in the first half of 2008, a decrease of \$2.0 million from the first half of 2007. Operating profit was 9% of sales in the first half of 2008 and 14% of sales in the first half of 2007.

Engineered Material Systems

<i>Millions</i>	Second Quarter Ended		First Half Ended	
	June 27, 2008	June 29, 2007	June 27, 2008	June 29, 2007
Sales	\$ 19.6	\$ 16.9	\$ 37.3	\$ 33.6
Operating profit	\$ 2.0	\$ 0.7	\$ 3.4	\$ 1.3

Engineered Material Systems includes clad inlay and overlay metals, precious and base metal electroplated systems, electron beam welded systems, contour profiled systems and solder-coated metal systems. These specialty strip metal products provide a variety of thermal, electrical or mechanical properties from a surface area or particular section of the material. Our cladding and plating capabilities allow for a precious metal or brazing alloy to be applied to a base metal only where it is needed, reducing the material cost to the customer as well as providing design flexibility. Major applications for these products include connectors, contacts and semiconductors. The largest markets for Engineered Material Systems are automotive electronics, telecommunications and computer electronics and data storage, while the energy, defense and medical electronic markets offer further growth opportunities. Engineered Material Systems are manufactured at our Lincoln, Rhode Island facility.

Sales from Engineered Material Systems totaled \$19.6 million in the second quarter 2008, an increase of 16% over sales of \$16.9 million in the second quarter 2007. Sales for the first six months of 2008 of \$37.3 million were 11% higher than sales from the comparable period in 2007.

The increase in sales in the second quarter and first six months of 2008 was partially due to higher shipments of materials for disk drive applications as compared to the same periods in 2007. While disk drive material sales in the first and second quarter 2008 were softer than the fourth quarter 2007 level, partially due to seasonality, order entry rates strengthened in the second quarter and we anticipate sales of these materials will increase in the third quarter.

Sales of new products to the energy market also contributed to the sales growth in the second quarter and first six months of 2008 while sales for automotive applications remained solid, particularly in Europe.

The gross margin on Engineered Material Systems sales was \$4.0 million, or 21% of sales, in the second quarter 2008 and \$2.8 million, or 17% of sales, in the second quarter 2007. For the first six months of the year, gross margin improved to \$7.4 million, or 20% of sales, in 2008 from \$5.4 million, or 16% of sales, in 2007.

The higher margin in the second quarter and first half of 2008 resulted largely from manufacturing improvements. These improvements are partially due to the recent implementation of a new high technology manufacturing center in the Lincoln facility, which has resulted in yield and efficiency gains. Performance improvements have also been

achieved in other portions of the facility, including plating operations. The change in product mix between years has been slightly favorable while the higher sales volume contributed to the improved margins as well, more so in the second quarter 2008 than the first quarter 2008. Manufacturing overhead costs in the first six months of 2008 were 4% lower than the first six months of 2007.

Total SG&A, R&D and other-net expenses were \$2.0 million in the second quarter 2008, a 4% decline from the second quarter 2007. Expenses totaling \$4.0 million in the first six months of 2008 were 2% lower than expenses in the same period a year ago.

Operating profit from Engineered Material Systems was \$2.0 million in the second quarter 2008 compared to \$0.7 million in the second quarter 2007. Operating profit of \$3.4 million in the first half of 2008 was a \$2.1 million improvement over the operating profit of \$1.3 million in the first half of 2007. Operating profit also improved from 4% of sales in the first half of 2007 to 9% in the first half of 2008.

Table of Contents**Legal**

One of our subsidiaries, Brush Wellman Inc., is a defendant in proceedings in various state and federal courts brought by plaintiffs alleging that they have contracted chronic beryllium disease or other claims as a result of exposure to beryllium. Plaintiffs in beryllium cases seek recovery under negligence and various other legal theories and seek compensatory and punitive damages, in many cases of an unspecified sum. Spouses, if any, claim loss of consortium.

The following table summarizes the associated activity with beryllium cases.

	Quarter Ended June 27, 2008	Quarter Ended Mar. 28, 2008
Total cases pending	8	9
Total plaintiffs	30	31
Number of claims (plaintiffs) filed during period ended	0(0)	0(0)
Number of claims (plaintiffs) settled during period ended	0(0)	0(0)
Aggregate cost of settlements during period ended (dollars in thousands) \$	0	\$ 0
Number of claims (plaintiffs) otherwise dismissed	1(1)	0(0)

Settlement payment and dismissal for a single case may not occur in the same period.

Additional beryllium claims may arise. Management believes that we have substantial defenses in these cases and intends to contest the suits vigorously. Employee cases, in which plaintiffs have a high burden of proof, have historically involved relatively small losses to us. Third-party plaintiffs (typically employees of customers or contractors) face a lower burden of proof than do employees or former employees, but these cases are generally covered by varying levels of insurance.

Although it is not possible to predict the outcome of the litigation pending against our subsidiaries and us, we provide for costs related to these matters when a loss is probable and the amount is reasonably estimable. Litigation is subject to many uncertainties, and it is possible that some of these actions could be decided unfavorably in amounts exceeding our reserves. An unfavorable outcome or settlement of a pending beryllium case or additional adverse media coverage could encourage the commencement of additional similar litigation. We are unable to estimate our potential exposure to unasserted claims.

Based upon currently known facts and assuming collectibility of insurance, we do not believe that resolution of the current and future beryllium proceedings will have a material adverse effect on our financial condition or cash flow. However, our results of operations could be materially affected by unfavorable results in one or more of these cases. As of June 27, 2008, two purported class actions were pending.

The balances recorded on the Consolidated Balance Sheets associated with beryllium litigation were as follows:

<i>Millions</i>	June 27, 2008	Dec. 31, 2007
-----------------	--------------------------	--------------------------

Asset (liability)			
Reserve for litigation	\$	(1.5)	\$ (1.3)
Insurance recoverable		1.2	1.0

Regulatory Matters. Standards for exposure to beryllium are under review by the United States Occupational Safety and Health Administration and by other governmental and private standard-setting organizations. One result of these reviews will likely be more stringent worker safety standards. More stringent standards may affect buying decisions by the users of beryllium-containing products. If the standards are made more stringent and our customers decide to reduce their use of beryllium-containing products, our operating results, liquidity and capital resources would likely be materially adversely affected. The impact of this potential adverse effect would depend on the nature and extent of the changes to the standards, the cost and ability to meet the new standards, the extent of the reduction in customer use and other factors. The magnitude of this potential adverse effect cannot be estimated.

Table of Contents

Financial Position

Net cash provided from operating activities was \$10.3 million in the first half of 2008 as net income, the benefits of depreciation and amortization and other factors more than offset unfavorable changes in various working capital items, including increases to accounts receivable and inventory and payment of the 2007 incentive compensation to employees. Cash from operations improved in the second quarter 2008 over the first quarter 2008. Cash from operations was \$13.4 million in the second quarter 2008 while \$3.1 million of cash was used in operations in the first quarter 2008.

Cash balances stood at \$15.2 million at the end of the second quarter 2008, a decline of \$16.6 million from year-end 2007, as a portion of the cash on hand, the cash from operations and additional borrowings were used to acquire Techni-Met and to finance capital expenditures.

Accounts receivable increased \$22.7 million, from \$97.4 million at the end of 2007 to \$120.1 million at the end of the second quarter 2008. This increase was due to a combination of higher sales in the second quarter 2008 than the fourth quarter 2007 and an increase in the average collection period. A portion of the increase was due to the acquisition of Techni-Met in the first quarter 2008. Accounts written off to bad debt expense and adjustments to the bad debt allowance were immaterial in the first half of 2008.

Other receivables totaling \$11.3 million as of December 31, 2007, which represented amounts due from our insurance carriers under the litigation settlement agreement signed in the fourth quarter 2007, were collected in full during the first quarter 2008.

Inventories were \$181.1 million, an increase of \$15.9 million, or 10%, during the first six months of 2008. The inventory turnover ratio, a measure of how quickly inventory is sold on average, as of the end of the second quarter declined from the end of last year but improved slightly from the end of the first quarter 2008. Approximately \$2.1 million of the increase was due to the Techni-Met acquisition. Inventories at various other domestic and international locations within the Advanced Material Technologies and Services segment increased to support the current and projected higher level of business. Inventories at Brush Resources increased \$2.3 million during the first six months of 2008 due to the opening of a new pit and increased bertrandite ore mining activity. Specialty Engineered Alloys inventory pounds were up 5% in the first half of 2008 in part due to longer production lead times for bulk products.

The \$15.9 million increase in inventory was net of the lower of cost or market adjustment on ruthenium inventories in the second quarter 2008.

We use the last in, first out (LIFO) method for valuing a large portion of our domestic inventories. By so doing, the most recent cost of various raw materials, including gold, copper and nickel, is charged to cost of sales in the current period. The older, and typically lower, costs are used to value the inventory on hand. Therefore, current changes in the cost of raw materials subject to the LIFO valuation method have only a minimal impact on changes in the inventory carrying value.

Prepaid expenses were \$19.6 million as of the end of the second quarter 2008, an increase of \$1.9 million from year-end 2007. The change in the balance was due to the timing of payments for manufacturing supplies, miscellaneous taxes and other items.

Other assets of \$32.8 million at the end of the second quarter 2008 were \$21.0 million higher than at the end of 2007. The increase is primarily from the estimated value of the intangible assets acquired with Techni-Met. The intangible

asset values are subject to change pending a final appraisal.

Capital expenditures for property, plant and equipment and mine development totaled \$14.8 million in the first half of 2008, which was below the total depreciation and amortization level for the period. Spending in the second quarter 2008 was slightly higher than spending in the first quarter 2008.

Spending in the first six months of 2008 included \$4.1 million for the design and development of the new facility for the production of primary beryllium under a Title III contract with the U.S. Department of Defense (DOD). The total cost of the project is estimated to be approximately \$90.4 million; we will contribute land, buildings, research and development, technology and ongoing operations valued at approximately \$23.2 million to

Table of Contents

the project. The DOD will reimburse us for the balance of the project cost. Reimbursements from the DOD are recorded as unearned income and included in other long-term liabilities on the Consolidated Balance Sheets. Construction of the facility began early in the third quarter 2008.

Advanced Material Technologies and Services expended approximately \$3.0 million for the expansion of various facilities and other projects in the first half of 2008. Specialty Engineered Alloys and Engineered Material Systems have various projects underway to upgrade and/or replace existing discrete pieces of equipment. Spending by Specialty Engineered Alloys totaled \$5.0 million in the first half of 2008.

We acquired the operating assets of Techni-Met, Inc. for \$87.4 million in February 2008. The acquisition was financed with a combination of cash and borrowings under the revolving credit agreement. Immediately subsequent to the acquisition, we sold the precious metal content of Techni-Met's inventory for its fair value of \$24.3 million to a financial institution and consigned it back under existing consignment lines. Preliminary goodwill assigned to the transaction, which is subject to final valuation, was \$17.9 million.

Other liabilities and accrued items of \$44.6 million as of the end of the second quarter 2008 were \$11.3 million lower than the balance of \$55.9 million at the end of 2007. Payment of the 2007 incentive compensation in the first quarter 2008, net of the expense for the first six months of the year, was the primary cause of the reduction. Accruals for other items, including changes in the timing of the payment of payroll deductions, fringe benefits and taxes other than income taxes as well changes in the fair value of outstanding derivative contracts contributed to the movement in the balance outstanding.

Unearned revenue, which is a liability representing products invoiced to customers but not shipped, was \$0.5 million as of June 27, 2008 compared to \$2.6 million as of December 31, 2007. Revenue and the associated margin will be recognized for these transactions when the goods ship, title passes and all other revenue recognition criteria are met. Invoicing in advance of the shipment, which is only done in certain circumstances, allows us to collect cash sooner than we would otherwise.

Other long-term liabilities were \$14.8 million as of the end of the second quarter 2008 compared to \$11.6 million as of the prior year end. This increase was primarily due to reimbursements received from the DOD for the construction of the new beryllium facility that were classified as long-term unearned income. This liability will be relieved to income over the life of the facility once it is built and placed into service. Other long-term liabilities, including the reserve for CBD litigation and the long-term portion of the incentive accruals, changed by minor amounts during the quarter.

The retirement and post-employment obligation balance of \$59.4 million at the end of the second quarter 2008 was \$1.9 million higher than the balance at December 31, 2007. This balance represents the liability under our domestic defined benefit pension plan, the retiree medical plan and other retirement plans and post-employment obligations. The main cause for the increase in the liability was the expense for the defined benefit plan as the expense for the other retirement plans was largely offset by the payments made during the first six months of 2008. We also made a contribution of \$0.4 million to the defined benefit plan in the second quarter 2008. We anticipate making additional contributions of approximately \$5.7 million in the second half of 2008 and that the contribution in 2009 will exceed the total contributions made in 2008.

Debt totaled \$87.1 million as of June 27, 2008, an increase of \$51.6 million over the balance as of December 31, 2007. This increase was primarily due to the Techni-Met acquisition in the first quarter 2008 and, to a lesser extent, funding of capital expenditures. Short-term debt increased \$10.7 million and long-term debt increased \$40.9 million in the first half of 2008. Short-term debt, which included foreign currency denominated loans, a gold-denominated loan and overnight dollar-based borrowings, totaled \$35.6 million as of the end of the second quarter 2008. The current

portion of long-term debt was \$0.6 million, while long-term debt was \$50.9 million. We were in compliance with all of our debt covenants as of the end of the second quarter 2008.

Shareholders equity was \$369.3 million at the end of the second quarter 2008, an increase of \$15.6 million over the \$353.7 million balance at the beginning of the year. The increase was primarily due to comprehensive income of \$13.0 million (see Note E to the Consolidated Financial Statements). Equity was also affected by stock compensation expense, the exercise of stock options, the tax benefits from the exercise of options and other factors.

Table of Contents

The balance outstanding under the off-balance sheet precious metal consigned inventory arrangements totaled \$129.9 million at the end of the second quarter 2008, an increase of \$58.7 million during 2008 as the quantities on hand as well as the average metal prices increased. The increase was also due to the acquisition of Techni-Met in the first quarter 2008 and the addition of their metal requirements under the consignment lines.

There have been no substantive changes in the summary of contractual obligations under long-term debt agreements, operating leases and material purchase commitments as of June 27, 2008 from the year-end 2007 totals as disclosed on page 39 of our annual report on Form 10-K for the year ended December 31, 2007.

Net cash provided from operating activities was \$11.4 million in the first half of 2007 as net income, changes in various liabilities and the benefits of depreciation more than offset the increases in accounts receivable and inventory. Cash provided from operating activities in the second quarter 2007 was \$16.1 million. Receivables grew \$27.6 million, or 32%, due to the higher sales volume in the quarter and a slower days sales outstanding. Inventories increased \$11.2 million, or 7%, in the first half of 2007, although the inventory turnover period improved. The majority of the inventory increase was in ruthenium-based products. Capital expenditures were \$11.2 million while mine development expenditures totaled \$6.2 million in the first half of 2007. Outstanding debt totaled \$41.6 million at the end of the first half of 2007, a decrease of \$7.4 million during that period primarily as a result of the cash provided from operations. We received \$4.9 million for the exercise of stock options during the first half of 2007. The cash balance stood at \$12.1 million at the end of the second quarter 2007, a decrease of \$3.6 million from the prior year end.

We believe funds from operations and the available borrowing capacity are adequate to support operating requirements, capital expenditures, projected pension plan contributions, strategic acquisitions and environmental remediation projects. Although debt increased in the first half of 2008, primarily as a result of the Techni-Met acquisition, we had approximately \$172.4 million of available borrowing capacity under the existing lines of credit as of June 27, 2008.

Critical Accounting Policies

For information regarding critical accounting policies, please refer to pages 41 to 44 of our annual report on Form 10-K for the period ended December 31, 2007.

Market Risk Disclosures

A portion of our ruthenium inventory remains exposed to movements in the market price and potentially subject to further lower of cost or market charges as of the end of the second quarter 2008. The ruthenium market price increased early in the third quarter and was higher than the price used to write the inventory down at the end of the second quarter 2008. In the near term, however, with the majority of our sales of ruthenium-containing products being manufactured from customer supplied material, we may not be able to make a significant reduction in the quantity of inventory exposed to adverse price movements.

For additional information regarding market risks, please refer to pages 44 to 46 of our annual report on Form 10-K for the period ended December 31, 2007.

Outlook

The overall media market demand has been strong and demand in the second half of the year is typically stronger than the first half. We continued our product qualification and other development work on various media market applications in the second quarter 2008 and we believe that our sales to this market in the second half of 2008 may

improve over the first half of 2008.

We anticipate that sales for defense-related applications will strengthen over the balance of the year. We also anticipate that demand will remain strong for wireless applications for Advanced Material Technologies and Services products and for oil and gas and heavy equipment applications for Specialty Engineered Alloys products. The Techni-Met acquisition provides an additional growth opportunity for this year as well as new technologies that can, in the long-term, be used in conjunction with our existing businesses to develop new applications. Sales of other new products are also contributing to the growth in many of our businesses.

Table of Contents

Sales to the automotive industry, as well as sales into Europe, may soften in the third quarter 2008 from the second quarter 2008 levels due to change over to the new model year, normal seasonality and other factors.

We have made yield and efficiency improvements at various facilities which have had a positive impact on our gross margins in the first half of 2008. We anticipate that these benefits will continue in future periods.

As of early third quarter 2008, we are projecting diluted earnings per share for the entire year 2008 to be in a range of \$1.45 to \$1.70.

Forward-Looking Statements

Portions of the narrative set forth in this document that are not statements of historical or current facts are forward-looking statements. Our actual future performance may materially differ from that contemplated by the forward-looking statements as a result of a variety of factors. These factors include, in addition to those mentioned herein:

The global and domestic economies;

The condition of the markets which we serve, whether defined geographically or by segment, with the major market segments being telecommunications and computer, data storage, aerospace and defense, automotive electronics, industrial components, appliance and medical;

Changes in product mix and the financial condition of customers;

Actual sales, operating rates and margins for the year 2008;

Our success in developing and introducing new products and new product ramp up rates, especially in the media market;

Our success in passing through the costs of raw materials to customers or otherwise mitigating fluctuating prices for those materials, including the impact of fluctuating prices on inventory values;

Our success in integrating newly acquired businesses, including the recent acquisition of the assets of Techni-Met, Inc.;

Our success in implementing our strategic plans and the timely and successful completion of any capital projects;

The availability of adequate lines of credit and the associated interest rates;

Other financial factors, including cost and availability of raw materials (both base and precious metals), tax rates, interest rates, metal financing fees, exchange rates, pension and other employee benefit costs, energy costs, regulatory compliance costs, the cost and availability of insurance, and the impact of the Company's stock price on the cost of incentive and deferred compensation plans;

The uncertainties related to the impact of war and terrorist activities;

Changes in government regulatory requirements and the enactment of new legislation that may impact our obligations; and

The conclusion of pending litigation matters in accordance with our expectation that there will be no material adverse effects.

Table of Contents

Item 3. Quantitative and Qualitative Disclosures about Market Risk

For information about our market risks, please refer to our annual report on Form 10-K to shareholders for the period ended December 31, 2007.

Item 4. Controls and Procedures

We carried out an evaluation under the supervision and with participation of management, including the Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of our disclosure controls and procedures as of June 27, 2008 pursuant to Rule 13a-15(b) under the Securities Exchange Act of 1934, as amended. Based upon that evaluation, our management, including the Chief Executive Officer and Chief Financial Officer, concluded that our disclosure controls and procedures were effective as of the evaluation date.

In the second quarter 2008, the Company implemented SAP (an information technology system for accounting, sales and manufacturing) at one of its domestic facilities. SAP was implemented in part to improve internal controls over financial reporting at this facility. This change in systems was subject to thorough testing and review by internal and external parties both before and after final implementation. SAP had previously been implemented at a significant number of the Company's other facilities. The Company continually strives to improve its internal control over financial reporting to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with GAAP.

There have been no other changes in our internal controls over financial reporting identified in connection with the evaluation required by Rule 13a-15 under the Securities Exchange Act of 1934, as amended, that occurred during the quarter ended June 27, 2008 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Table of Contents

PART II OTHER INFORMATION

Item 1. Legal Proceedings

Our subsidiaries and our holding company are subject, from time to time, to a variety of civil and administrative proceedings arising out of our normal operations, including, without limitation, product liability claims, health, safety and environmental claims and employment-related actions. Among such proceedings are the cases described below.

Beryllium Claims

As of June 27, 2008, our subsidiary, Brush Wellman Inc., was a defendant in eight proceedings in various state and federal courts brought by plaintiffs alleging that they have contracted, or have been placed at risk of contracting, chronic beryllium disease or other lung conditions as a result of exposure to beryllium. Plaintiffs in beryllium cases seek recovery under negligence and various other legal theories and seek compensatory and punitive damages, in many cases of an unspecified sum. Spouses of some plaintiffs claim loss of consortium.

One case previously reported on was dismissed during the fourth quarter of 2007. During the second quarter of 2008, the number of beryllium cases (which were previously reported as 9 cases (involving 31 plaintiffs)) remained unchanged at 8 cases (involving 30 plaintiffs) as of March 28, 2008 and as of June 27, 2008. No cases were filed, settled or dismissed during the quarter. During the second quarter of 2008, the court denied the motion for class certification in one case described below.

The eight pending beryllium cases as of June 27, 2008 fall into two categories: Six cases involving third-party individual plaintiffs, with 14 individuals (and four spouses who have filed claims as part of their spouse's case and two children who have filed claims as part of their parent's case); and two purported class actions, involving ten named plaintiffs, as discussed more fully below. Claims brought by third-party plaintiffs (typically employees of our customers or contractors) are generally covered by varying levels of insurance.

The first purported class action is Manuel Marin, et al. v. Brush Wellman Inc., filed in Superior Court of California, Los Angeles County, case number BC299055, on July 15, 2003. The named plaintiffs are Manuel Marin, Lisa Marin, Garfield Perry and Susan Perry. The defendants are Brush Wellman, Appanaitis Enterprises, Inc., and Doe Defendants 1 through 100. A First Amended Complaint was filed on September 15, 2004, naming five additional plaintiffs. The five additional named plaintiffs are Robert Thomas, Darnell White, Leonard Joffrion, James Jones and John Kesselring. The plaintiffs allege that they have been sensitized to beryllium while employed at the Boeing Company. The plaintiffs' wives claim loss of consortium. The plaintiffs purport to represent two classes of approximately 250 members each, one consisting of workers who worked at Boeing or its predecessors and are beryllium sensitized and the other consisting of their spouses. They have brought claims for negligence, strict liability design defect, strict liability failure to warn, fraudulent concealment, breach of implied warranties, and unfair business practices. The plaintiffs seek injunctive relief, medical monitoring, medical and health care provider reimbursement, attorneys' fees and costs, revocation of business license, and compensatory and punitive damages. Messrs. Marin, Perry, Thomas, White, Joffrion, Jones and Kesselring represent current and past employees of Boeing in California; and Ms. Marin and Ms. Perry are spouses. Defendant Appanaitis Enterprises Inc. was dismissed on May 5, 2005. Plaintiffs' motion for class certification, which the Company opposed, was heard by the court on February 8, 2008, and the motion was denied by the court on May 7, 2008. Plaintiffs filed a notice of appeal on May 20, 2008.

The second purported class action is Gary Anthony v. Small Tube Manufacturing Corporation d/b/a Small Tube Products Corporation, Inc., et al., filed in the Court of Common Pleas of Philadelphia County, Pennsylvania, case number 000525, on September 7, 2006. The case was removed to the U.S. District Court for the Eastern District of

Pennsylvania, case number 06-CV-4419, on October 4, 2006. The only named plaintiff is Gary Anthony. The defendants are Small Tube Manufacturing Corporation, d/b/a Small Tube Products Corporation, Inc.; Admiral Metals Inc.; Tube Methods, Inc.; and Cabot Corporation. The plaintiff purports to sue on behalf of a class of current and former employees of the U.S. Gauge facility in Sellersville, Pennsylvania who have ever been exposed to beryllium for a period of at least one month while employed at U.S. Gauge. The plaintiff has brought claims for negligence. Plaintiff seeks the establishment of a medical monitoring trust fund, cost of publication of approved guidelines and procedures for medical screening and monitoring of the class, attorneys fees and expenses.

Table of Contents

Defendant Tube Methods, Inc. filed a third-party complaint against Brush Wellman Inc. in that action on November 15, 2006. Tube Methods alleges that Brush supplied beryllium-containing products to U.S. Gauge, and that Tube Methods worked on those products, but that Brush is liable to Tube Methods for indemnification and contribution. Brush moved to dismiss the Tube Methods complaint on December 22, 2006. On January 12, 2007, Tube Methods filed an amended third-party complaint, which Brush moved to dismiss on January 26, 2007; however, the Court denied the motion on September 28, 2007. Brush filed its answer to the amended third-party complaint on October 19, 2007. On November 14, 2007, two of the defendants filed a joint motion for an order permitting discovery to make the threshold determination of whether plaintiff is sensitized to beryllium. On February 13, 2008, the court approved the parties' stipulation that the plaintiff is not sensitized to beryllium. On February 29, 2008, Brush filed a motion for summary judgment based on plaintiff's lack of any substantially increased risk of CBD. Oral argument on this motion took place on June 13, 2008, and the court took the motion under submission. Plaintiff is required to file a motion for class certification on or before September 3, 2008, with oral argument on that motion scheduled for December 2008.

Other Claims

One of our subsidiaries, Williams Advanced Materials Inc. (WAM), is a party to two patent litigations in the U.S. involving Target Technology Company, LLC of Irvine, California (Target). Both actions involve patents directed to technology used in the production of DVD-9s, which are high storage capacity DVDs. The patents at issue concern certain silver alloys used to make the semi-reflective layer in DVD-9s, a thin metal film that is applied to a DVD-9 through a process known as sputtering. The raw material used in the sputtering process is called a target. Target alleges that WAM manufactures and sells infringing sputtering targets to DVD manufacturers.

In the first action, filed in April 2003 by WAM against Target in the U.S. District Court, Western District of New York (case no. 03-CV-0276A (SR)) (the NY Action), WAM has asked the Court for a judgment declaring certain Target patents invalid and/or unenforceable and awarding WAM damages. Target counterclaimed alleging infringement of those patents and seeking a judgment for infringement, an injunction against further infringement and damages for past infringement. Following certain proceedings in which WAM was denied an injunction to prevent Target from suing and threatening to sue WAM's customers, Target filed an amended counterclaim and a third-party complaint naming certain of WAM's customers and other entities as parties to the case and adding related other patents to the NY Action. The action is stayed pending resolution of the ownership issue in the CA Action, discussed more fully below.

In the second litigation, Target in September 2004 filed in the U.S. District Court, Central District of California (case no. SAC04-1083 DOC (MLGx)) a separate action for infringement of one of the same patents named in the NY Action (the CA Action), naming as defendants WAM and certain of WAM's customers who purchase certain WAM sputtering targets. Target seeks a judgment that the patent is valid and infringed by the defendants, a permanent injunction, damages adequate to compensate Target for the infringement, treble damages and attorneys' fees and costs. In April 2007, Sony DADC U.S., Inc. (Sony) intervened in the CA Action claiming ownership of that patent and others of the patents that Target is seeking to enforce in the NY Action. Sony's claim is based on its prior employment of the patentee and Target's founder, Hampshire H. Nee, and includes a demand for damages against both Target and Nee. WAM on behalf of itself and its customers has a paid-up license from Sony under any rights that Sony has in those patents. Trial of the CA Action is currently scheduled for March 2009.

Item 4. Submission of Matters to a Vote of Security Holders

(a) The Company's Annual Meeting of Shareholders for 2008 was held on May 7, 2008.

(b) The first matter was the election of Directors. Three directors were elected to serve for a term of three years by the following vote:

	Shares Voted For	Shares Voted Against	Shares Voted Abstaining	Shares Non-Voted
Albert C. Bersticker	12,950,217	5,421,580	-0-	1,909,253
William G. Pryor	14,821,792	3,550,005	-0-	37,878
N. Mohan Reddy	13,736,955	4,834,842	-0-	1,122,515

Table of Contents

The following directors continued their term of office after the meeting: Richard J. Hipple, Joseph P. Keithley, William B. Lawrence, William P. Madar, William R. Robertson and John Sherwin, Jr. As previously disclosed, the Board of Directors increased its size to ten and elected Mr. Craig S. Shular following the annual meeting.

(c) The second matter was a vote to ratify the appointment of Ernst & Young LLP as Brush Engineered Materials auditors for the fiscal year ending December 31, 2008. The tabulation of votes for the appointment, which was ratified, is as follows:

For	18,266,225
Against.	85,780
Abstain.	19,792
Broker Non-votes	2,301,088

Item 6. Exhibits

- 4.1 Second Amendment to Rights Agreement, dated as of July 31, 2008, by and between Brush Engineered Materials Inc. and Wells Fargo Bank, N.A. as Rights Agent (filed as Exhibit 4.1 to the amended Form 8-A filed on July 31, 2008), incorporated herein by reference.
- 4.2 Second Amendment to Credit Agreement dated June 11, 2008 among Brush Engineered Materials Inc. and other borrowers and JPMorgan Chase, N.A., acting for itself and as agent for certain other banking institutions as lenders (filed as Exhibit 99.1 to the Company's Form 8-K on June 16, 2008), incorporated herein by reference.
- 10.1 Amended and Restated Form of Severance Agreement for Executive Officers.
- 10.2 Amended and Restated Form of Severance Agreement for Key Employees.
- 10.3 Amended and Restated 2006 Stock Incentive Plan.
- 10.4 Amended and Restated Executive Deferred Compensation Plan II.
- 11 Statement regarding computation of per share earnings
- 31.1 Certification of Chief Executive Officer required by Rule 13a-14(a) or 15d-14(a)
- 31.2 Certification of Chief Financial Officer required by Rule 13a-14(a) or 15d-14(a)
- 32 Certification Pursuant to 18 U.S.C. Section 1350, as Adopted Pursuant to Section 906 of the Sarbanes-Oxley Act of 2002
